PROJECT DESCRIPTION

The project site, which is in San Francisco's South of Market neighborhood, is on the southeast corner of 6th and Shipley streets; it has 75 feet of frontage on 6th Street and 125 feet of frontage on Shipley Street. The project site is occupied by a paved area and two one-story buildings. The entire property is used for public parking.

The proposed project consists of demolishing the existing buildings and surface parking lot and constructing a new nine-story, 85-foot-tall mixed-use building containing 102 single-room occupancy (SRO) units and approximately 1,730 square feet of retail space. No automobile parking would be provided, and the existing driveway and curb cut on 6th Street would be removed. Bicycle parking would be provided in a storage room on the ground floor of the proposed building and on the sidewalks adjacent to the project site. Usable open space for the residents of the proposed project would be provided in the form of private balconies and decks on the fourth through seventh floors and common decks on the eighth floor and the roof.

Construction of the proposed project is expected to last 16 months. The proposed building would be supported by deep piers with a mat slab. Construction of the proposed project would require excavation to a depth of two feet below ground surface and the removal of about 520 cubic yards of soil from the project site.

The proposed project would require the following approvals:

- **Large Project Authorization** (*Planning Commission*)
- **Demolition Permit** (*Planning Department and Department of Building Inspection*)
- **Site/Building Permit** (*Planning Department and Department of Building Inspection*)

Large Project Authorization by the Planning Commission constitutes the Approval Action for the proposed project. The Approval Action date establishes the start of the 30-day appeal period for this CEQA exemption determination pursuant to Section 31.04(h) of the San Francisco Administrative Code.

EVALUATION OF ENVIRONMENTAL EFFECTS

This Community Plan Exemption (CPE) Checklist evaluates whether the environmental impacts of the proposed project are addressed in the Programmatic Environmental Impact Report for the Eastern Neighborhoods Rezoning and Area Plans (Eastern Neighborhoods PEIR).¹ The CPE Checklist indicates whether the proposed project would result in significant impacts that: (1) are peculiar to the project or project site; (2) were not identified as significant project-level, cumulative, or off-site effects in the PEIR; or (3) are previously identified significant effects, which as a result of substantial new information that was not known at the time that the Eastern Neighborhoods PEIR was certified, are determined to have a more severe adverse impact than discussed in the PEIR. Such impacts, if any, will be evaluated in a project-specific Mitigated Negative Declaration or Environmental Impact Report. If no such topics are identified, the proposed project is exempt from further environmental review in accordance with Public Resources Code Section 21083.3 and CEQA Guidelines Section 15183.

Mitigation measures identified in the PEIR are discussed under each topic area, and measures that are applicable to the proposed project are provided under the Mitigation and Improvement Measures section at the end of this checklist.

The Eastern Neighborhoods PEIR identified significant impacts related to land use, transportation, cultural resources, shadow, noise, air quality, and hazardous materials. Additionally, the PEIR identified significant cumulative impacts related to land use, transportation, and cultural resources. Mitigation measures were identified for the above impacts and reduced all impacts to less-than-significant levels except for those related to land use (cumulative impacts on PDR use), transportation (program-level and cumulative traffic impacts at nine intersections; program-level and cumulative transit impacts on seven Muni lines), cultural resources (cumulative impacts from demolition of historical resources), and shadow (program-level impacts on parks).

The proposed project consists of demolishing the existing buildings and surface parking lot and constructing a nine-story building containing 102 SRO units and approximately 1,730 gsf of retail space. As discussed below in this checklist, the proposed project would not result in new, significant environmental effects, or effects of greater severity than were already analyzed and disclosed in the Eastern Neighborhoods PEIR.

¹ San Francisco Planning Department, *Eastern Neighborhoods Rezoning and Area Plans Final Environmental Impact Report*, Case No. 2004.0160E, certified August 7, 2008. Available online at: <http://sf-planning.org/area-plan-eirs>, accessed August 31, 2016.

CHANGES IN THE REGULATORY ENVIRONMENT

Since the certification of the Eastern Neighborhoods PEIR in 2008, several new policies, regulations, statutes, and funding measures have been adopted, passed, or are underway that affect the physical environment and/or environmental review methodology for projects in the Eastern Neighborhoods plan areas. As discussed in each topic area referenced below, these policies, regulations, statutes, and funding measures have implemented or will implement mitigation measures or further reduce less-than-significant impacts identified in the PEIR. These include:

- State statute regarding Aesthetics, Parking Impacts, effective January 2014, and state statute and Planning Commission resolution regarding automobile delay, and vehicle miles traveled (VMT), effective March 2016 (see “CEQA Section 21099” heading below);
- The adoption of 2016 interim controls in the Mission District requiring additional information and analysis regarding housing affordability, displacement, loss of PDR and other analyses, effective January 2016;
- *San Francisco Bicycle Plan* update adoption in June 2009, *Better Streets Plan* adoption in 2010, Transit Effectiveness Project (aka “Muni Forward”) adoption in March 2014, Vision Zero adoption by various City agencies in 2014, Proposition A and B passage in November 2014, the Transportation Sustainability Program process, and state statute and Planning Commission resolution regarding automobile delay, and VMT, effective March 2016 (see Checklist section “Transportation”);
- San Francisco ordinance establishing Noise Regulations Related to Residential Uses Near Places of Entertainment, effective June 2015 (see Checklist section “Noise”);
- San Francisco ordinances establishing Construction Dust Control, effective July 2008, and Enhanced Ventilation Required for Urban Infill Sensitive Use Developments, amended December 2014 (see Checklist section “Air Quality”);
- San Francisco Clean and Safe Parks Bond passage in November 2012 and San Francisco Recreation and Open Space Element of the *General Plan* adoption in April 2014 (see Checklist section “Recreation”);
- *Urban Water Management Plan* adoption in 2011 and Sewer System Improvement Program process (see Checklist section “Utilities and Service Systems”); and
- Article 22A of the Health Code amendments effective August 2013 (see Checklist section “Hazardous Materials”).

CHANGES IN THE PHYSICAL ENVIRONMENT

Since the certification of the Eastern Neighborhoods PEIR in 2008, as evidenced by the volume of development applications submitted to the Planning Department since 2012, the pace of development activity has increased in the Eastern Neighborhoods plan areas. The Eastern Neighborhoods PEIR projected that implementation of the Eastern Neighborhoods Plan could result in a substantial amount of growth within the Eastern Neighborhoods plan areas, resulting in an increase of approximately 7,400 to 9,900 net dwelling units and 3,200,000 to 6,600,000 sf of net nonresidential space (excluding PDR loss)

throughout the lifetime of the plan (year 2025).² The Eastern Neighborhoods PEIR projected that this level of development would result in a total population increase of approximately 23,900 to 33,000 people throughout the lifetime of the plan.³ Growth projected in the Eastern Neighborhoods PEIR was based on a soft site analysis (i.e., assumptions regarding the potential for a site to be developed through the year 2025) and not based upon the created capacity of the rezoning options (i.e., the total potential for development that would be created indefinitely).⁴

As of September 2016, projects containing 8,527 dwelling units and 2,205,720 square feet (sf) of nonresidential space (excluding PDR loss) have completed or are proposed to complete environmental review within the Eastern Neighborhoods plan areas.^{5 6} This level of development corresponds to an overall population increase of approximately 22,099 to 25,183 persons. Of the 8,527 dwelling units that are under review or have completed environmental review, building permits have been issued⁷ for 2,957 dwelling units, or approximately 35 percent of those units (information is not available regarding building permit nonresidential square footage).

Within the East SoMa subarea, the Eastern Neighborhoods PEIR projected that implementation of the Eastern Neighborhoods Plan could result in an increase of 2,294 to 3,083 net dwelling units and 63,122 to 90,589 sf of nonresidential space (excluding PDR loss) through the year 2025. This level of development corresponds to an overall population increase of approximately 5,818 to 8,985 persons. As of September 2016, projects containing 1,779 dwelling units and 1,031,563 sf of nonresidential space (excluding PDR loss) have completed or are proposed to complete environmental review within the East SoMa subarea. This level of development corresponds to an overall population increase of 5,636 to 6,988 persons. Of the 1,779 dwelling units that are under review or have completed environmental

² Tables 12 through 16 of the Eastern Neighborhoods Draft EIR and Table C&R-2 in the Comments and Responses show projected net growth based on proposed rezoning scenarios. A baseline for existing conditions in the year 2000 was included to provide context for the scenario figures for parcels affected by the rezoning, not projected growth totals from a baseline of the year 2000. Estimates of projected growth were based on parcels that were to be rezoned and did not include parcels that were recently developed (i.e., parcels with projects completed between 2000 and March 2006) or have proposed projects in the pipeline (i.e., projects under construction, projects approved or entitled by the Planning Department, or projects under review by the Planning Department or the Department of Building Inspection). Development pipeline figures for each Plan Area were presented separately in Tables 5, 7, 9, and 11 in the Draft EIR. Environmental impact assessments for these pipeline projects were considered separately from the Eastern Neighborhoods rezoning effort.

³ Table 2: Forecast Growth by Rezoning Option, Chapter IV of the Eastern Neighborhoods Draft EIR, shows projected net growth based on proposed rezoning scenarios. A baseline for existing conditions in the year 2000 was included to provide context for the scenario figures for parcels affected by the rezoning.

⁴ San Francisco Planning Department, Community Planning in the Eastern Neighborhoods, Rezoning Options Workbook, Draft, February 2003. This document is available at: <http://www.sf-planning.org/index.aspx?page=1678#background>.

⁵ For this and the Land Use and Land Use Planning section, environmental review is defined as projects that have or are relying on the growth projections and analysis in the Eastern Neighborhoods PEIR for environmental review (i.e., Community Plan Exemptions or Focused Mitigated Negative Declarations and Focused Environmental Impact Reports with an attached Community Plan Exemption Checklist).

⁶ These estimates include projects that have completed environmental review and foreseeable projects (including the proposed project). Foreseeable projects are those projects for which environmental evaluation applications have been submitted to the Planning Department.

⁷ An issued building permit refers to buildings currently under construction or open for occupancy. This number includes all units approved under CEQA (including CPEs, Categorical Exemptions and other types of CEQA documents).

review, building permits have been issued for 705 dwelling units, or approximately 40 percent of those units. Therefore, anticipated growth from the Eastern Neighborhoods Rezoning and Area Plans is within the Eastern Neighborhoods PEIR growth projections.

Growth that has occurred within the plan areas since adoption of the Eastern Neighborhoods PEIR has been planned for, and the effects of that growth were anticipated and considered in the Eastern Neighborhoods PEIR. Although the number of housing units under review is approaching or exceeds the residential unit projections for the Mission and Showplace Square/Potrero Hill Area Plans of the Eastern Neighborhoods PEIR, the nonresidential reasonably foreseeable growth is well below what was anticipated. Therefore, population growth associated with approved and reasonably foreseeable development is within the population that was projected for 2025. Furthermore, the number of constructed projects within the Eastern Neighborhoods is well below what has been approved for all plan areas.

The Eastern Neighborhoods PEIR utilized the growth projections to analyze the physical environmental impacts associated with that growth for the following environmental impact topics: Land Use; Population, Housing, Business Activity, and Employment; Transportation; Noise; Air Quality; Parks, Recreation, and Open Space; Utilities/Public Services; and Water. The analysis took into account the overall growth in the Eastern Neighborhoods and did not necessarily analyze in isolation the impacts of growth in one land use category, although each land use category may have differing severities of effects. The analysis of environmental topics covered in this checklist takes into account the differing severities of effects of the residential and employee population.

In summary, projects proposed within the Eastern Neighborhoods plan areas have not exceeded the overall population growth that was projected in the Eastern Neighborhoods PEIR; therefore, foreseeable growth within the plan areas do not present substantial new information that was not known at the time of the PEIR and would not result in new significant environmental impacts or substantially more severe adverse impacts than discussed in the PEIR.

SENATE BILL 743

Aesthetics and Parking

In accordance with CEQA Section 21099: Modernization of Transportation Analysis for Transit-Oriented Projects, aesthetics and parking shall not be considered in determining if a project has the potential to result in significant environmental effects, provided the project meets all of the following three criteria:

- a) The project is in a transit priority area;
- b) The project is on an infill site; and
- c) The project is residential, mixed-use residential, or an employment center.

The proposed project meets each of the above criteria; therefore, this checklist does not consider aesthetics or parking in determining the significance of project impacts under CEQA.⁸ Project elevations and an architectural rendering are included in the project description.

⁸ San Francisco Planning Department, *Eligibility Checklist for CEQA Section 21099: Modernization of Transportation Analysis for 345 6th Street*, September 26, 2016.

Automobile Delay and Vehicle Miles Traveled

In addition, CEQA Section 21099(b)(1) requires that the State Office of Planning and Research (OPR) develop revisions to the CEQA Guidelines establishing criteria for determining the significance of transportation impacts of projects that “promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses.” CEQA Section 21099(b)(2) states that upon certification of the revised guidelines for determining transportation impacts pursuant to Section 21099(b)(1), automobile delay, as described solely by level of service or similar measures of vehicular capacity or traffic congestion, shall not be considered a significant impact on the environment under CEQA.

In January 2016, the OPR published for public review and comment a [Revised Proposal on Updates to the CEQA Guidelines on Evaluating Transportation Impacts in CEQA](#)⁹ recommending that transportation impacts for projects be measured using a vehicle miles traveled (VMT) metric. On March 3, 2016, in anticipation of the future certification of the revised CEQA Guidelines, the San Francisco Planning Commission adopted the OPR’s recommendation to use the VMT metric instead of automobile delay to evaluate the transportation impacts of projects (Resolution No. 19579). The VMT metric does not apply to the analysis of project impacts on non-automobile modes of travel such as riding transit, walking, and bicycling. Therefore, impacts and mitigation measures from the Eastern Neighborhoods PEIR associated with automobile delay are not discussed in this checklist, including PEIR Mitigation Measures E-1: Traffic Signal Installation, E-2: Intelligent Traffic Management, E-3: Enhanced Funding, and E-4: Intelligent Traffic Management. Instead, a VMT analysis is provided in the Transportation section.

<i>Topics:</i>	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
1. LAND USE AND LAND USE PLANNING—Would the project:				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Have a substantial impact upon the existing character of the vicinity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Eastern Neighborhoods PEIR determined that adoption of the Area Plans would result in an unavoidable significant impact on land use due to the cumulative loss of PDR. The proposed project would not remove any existing PDR uses and would therefore not contribute to any impact related to loss of PDR uses that was identified in the Eastern Neighborhoods PEIR.

The Eastern Neighborhoods PEIR determined that implementation of the Area Plans would not create any new physical barriers in the Eastern Neighborhoods, because the rezoning and Area Plans do not

⁹ This document is available online at: https://www.opr.ca.gov/s_sb743.php.

provide for any new major roadways, such as freeways that would disrupt or divide the plan area or individual neighborhoods or subareas.

The Citywide Planning and Current Planning divisions of the Planning Department have determined that the proposed project is permitted in the MUR District and is consistent with the height, density, and land uses specified in the *East SoMa Area Plan*.^{10, 11} Implementation of the proposed project would result in residential and commercial uses that would be consistent with and maintain the mixed-use character of the project vicinity.

Because the proposed project is consistent with the development density established in the Eastern Neighborhoods Rezoning and Area Plans, implementation of the proposed project would not result in significant impacts related to land use and land use planning that were not identified in the Eastern Neighborhoods PEIR, and no mitigation measures are necessary.

Topics:	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
2. POPULATION AND HOUSING—				
Would the project:				
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Displace substantial numbers of existing housing units or create demand for additional housing, necessitating the construction of replacement housing?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

One of the objectives of the Eastern Neighborhoods Rezoning and Area Plans is to identify appropriate locations for housing in the City’s industrially zoned land to meet the citywide demand for additional housing. The PEIR concluded that an increase in population in the Plan Areas is expected to occur as a secondary effect of the proposed rezoning and that any population increase would not, in and of itself, result in adverse physical effects, but would serve to advance key City policy objectives, such as providing housing in appropriate locations next to downtown and other employment generators and furthering the City’s Transit First policies. It was anticipated that the rezoning would result in an increase in both housing development and population in all of the Area Plan neighborhoods. The Eastern Neighborhoods PEIR determined that the anticipated increase in population and density would not result in significant adverse physical effects on the environment. No mitigation measures were identified in the PEIR.

¹⁰ Joshua Switzky, San Francisco Planning Department, *Community Plan Exemption Eligibility Determination, Citywide Planning and Policy Analysis, Case No. 2013.1773E, 345 6th Street, October 26, 2016.*

¹¹ Jeff Joslin, San Francisco Planning Department, *Community Plan Exemption Eligibility Determination, Current Planning Analysis, Case No. 2013.1773E, 345 6th Street, October 18, 2016.*

The proposed project consists of demolishing the existing buildings and surface parking lot and constructing a nine-story building containing 102 SRO units and approximately 1,730 gsf of retail space, which would result in a total of about 105 residents and five employees on the project site.¹² These direct effects of the proposed project on population and housing are within the scope of the population growth anticipated under the Eastern Neighborhoods Rezoning and Area Plans and evaluated in the Eastern Neighborhoods PEIR.

For these reasons, the proposed project would not result in significant impacts on population and housing beyond those identified in the Eastern Neighborhoods PEIR.

<u>Topics:</u>	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
3. CULTURAL RESOURCES—Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5, including those resources listed in Article 10 or Article 11 of the San Francisco Planning Code?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Disturb any human remains, including those interred outside of formal cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Historic Architectural Resources

Pursuant to CEQA Guidelines Sections 15064.5(a)(1) and 15064.5(a)(2), historical resources are buildings or structures that are listed, or are eligible for listing, in the California Register of Historical Resources (CRHR) or are identified in a local register of historical resources, such as Articles 10 and 11 of the San Francisco Planning Code. The Eastern Neighborhoods PEIR determined that future development facilitated through the changes in use districts and height limits under the Eastern Neighborhoods Area Plans could have substantial adverse changes on the significance of both individual historical resources and on historical districts within the Plan Areas. The PEIR determined that approximately 32 percent of the known or potential historical resources in the Plan Areas could potentially be affected under the preferred alternative. The Eastern Neighborhoods PEIR found this impact to be significant and unavoidable. This impact was addressed in a Statement of Overriding Considerations with findings and adopted as part of the approval of the Eastern Neighborhoods Rezoning and Area Plans on January 19, 2009.

The subject property was evaluated as part of the South of Market Area Historic Resource Survey, which was adopted by the Historic Preservation Commission in July 2010. Based on this survey, the subject

¹² San Francisco Planning Department, *Transportation Impact Analysis Guidelines for Environmental Review*, October 2002, Appendix C, Table C-1. An employment factor of 350 gsf per employee applies to general retail uses. Based on 1,730 gsf of retail use, there would be five employees.

property was assigned a California Historic Resource Status Code of 6Z, which defines the property as “ineligible for [National Register], [California Register], or local designation through survey evaluation.” Therefore, the subject property is not considered to be a historic resource for the purposes of CEQA, and implementation of the proposed project would not result in the demolition of a historic resource. In addition, the project site is not within an existing historic district.

For these reasons, the proposed project would not contribute to the significant and unavoidable impacts on historical resources that were identified in the Eastern Neighborhoods PEIR.

Archeological Resources

The Eastern Neighborhoods PEIR determined that implementation of the Area Plans could result in significant impacts on archeological resources and identified three mitigation measures that would reduce these potential impacts to less-than-significant levels. PEIR Mitigation Measure J-1: Properties with Previous Studies, applies to properties for which a final archeological research design and treatment plan (ARDTP) is on file at the Northwest Information Center and the Planning Department. PEIR Mitigation Measure J-2: Properties with No Previous Studies, applies to properties for which no archeological assessment report has been prepared or for which the archeological documentation is incomplete or inadequate to serve as an evaluation of potential effects on archeological resources under CEQA. PEIR Mitigation Measure J-3: Mission Dolores Archeological District, which applies to properties in the Mission Dolores Archeological District, requires that a specific archeological testing program be conducted by a qualified archeological consultant with expertise in California prehistoric and urban historical archeology.

The project site is not in an area for which a previous archeological study has been conducted and an ARDTP is on file, so PEIR Mitigation Measure J-1 is not applicable to the proposed project. No previous archeological studies have been conducted for the project site, so PEIR Mitigation Measure J-2 is applicable to the proposed project. PEIR Mitigation Measure J-2 requires the preparation of a Preliminary Archeological Sensitivity Study to determine the potential for archeological resources to be present at the project site. The Planning Department conducted a Preliminary Archeological Review (PAR) and determined that the proposed project would have no impact on archeological resources. As part of the PAR, the Planning Department determined that a mitigation measure related to the accidental discovery of archeological resources is applicable to the proposed project.¹³ This mitigation measure, identified as Project Mitigation Measure 1, is discussed on pp. 53-54. The project site is not in the Mission Dolores Archeological District, so PEIR Mitigation Measure J-3 is not applicable to the proposed project.

For these reasons, the proposed project would not result in significant impacts on archeological resources beyond those identified in the Eastern Neighborhoods PEIR.

¹³ Randall Dean, San Francisco Planning Department, email to Michael Li, San Francisco Planning Department, July 16, 2015.

<u>Topics:</u>	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
4. TRANSPORTATION AND CIRCULATION—Would the project:				
a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with an applicable congestion management program, including but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Result in a change in air traffic patterns, including either an increase in traffic levels, obstructions to flight, or a change in location, that results in substantial safety risks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Eastern Neighborhoods PEIR anticipated that growth resulting from the zoning changes would not result in significant impacts related to pedestrians, bicyclists, loading, emergency access, or construction. As the proposed project is within the scope of development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional impacts on pedestrians, bicyclists, loading, emergency access, or construction beyond those analyzed in the Eastern Neighborhoods PEIR.

However, the Eastern Neighborhoods PEIR anticipated that growth resulting from the zoning changes could result in significant impacts on transit ridership and identified seven transportation mitigation measures, which are discussed below in the “Transit” subsection. Even with mitigation, however, it was anticipated that the significant adverse cumulative impacts on transit lines could not be fully mitigated. Thus, these impacts were found to be significant and unavoidable. As discussed above under “SB 743,” in response to state legislation that called for removing automobile delay from CEQA analysis, the Planning Commission adopted Resolution No. 19579 replacing automobile delay with a vehicle miles traveled (VMT) metric for analyzing transportation impacts of a project. Therefore, impacts and mitigation measures from the Eastern Neighborhoods PEIR associated with automobile delay are not discussed in this checklist.

The Eastern Neighborhoods PEIR did not evaluate VMT or the potential for induced automobile travel. The VMT analysis presented below evaluates the project’s transportation effects using the VMT metric.

The project site is not located within an airport land use plan area, or in the vicinity of a private airstrip. Therefore, CPE Checklist Topic 4c is not applicable to the proposed project.

Vehicle Miles Traveled (VMT) Analysis

Many factors affect travel behavior. These factors include density, diversity of land uses, design of the transportation network, access to regional destinations, distance to high-quality transit, development scale, demographics, and transportation demand management. Typically, low-density development at great distance from other land uses, located in areas with poor access to non-private vehicular modes of travel, generate more automobile travel compared to development located in urban areas, where a higher density, mix of land uses, and travel options other than private vehicles are available.

Given these travel behavior factors, San Francisco has a lower VMT ratio than the nine-county San Francisco Bay Area region. In addition, some areas of the City have lower VMT ratios than other areas of the City. These areas of the City can be expressed geographically through transportation analysis zones (TAZs). TAZs are used in transportation planning models for transportation analysis and other planning purposes. The zones vary in size from single city blocks in the downtown core, multiple blocks in outer neighborhoods, to even larger zones in historically industrial areas like the Hunters Point Shipyard.

The San Francisco County Transportation Authority (Transportation Authority) uses the San Francisco Chained Activity Model Process (SF-CHAMP) to estimate VMT by private automobiles and taxis for different land use types. Travel behavior in SF-CHAMP is calibrated based on observed behavior from the California Household Travel Survey 2010-2012, census data regarding automobile ownership rates and county-to-county worker flows, and observed vehicle counts and transit boardings. SF-CHAMP uses a synthetic population, which is a set of individual actors that represents the Bay Area's actual population, who make simulated travel decisions for a complete day. The Transportation Authority uses tour-based analysis for office and residential uses, which examines the entire chain of trips over the course of a day, not just trips to and from the project. For retail uses, the Transportation Authority uses trip-based analysis, which counts VMT from individual trips to and from the project (as opposed to the entire chain of trips). A trip-based approach, as opposed to a tour-based approach, is necessary for retail projects because a tour is likely to consist of trips stopping in multiple locations, and the summarizing of tour VMT to each location would overestimate VMT.^{14, 15}

For residential development, the existing regional average daily VMT per capita is 17.2.¹⁶ For retail development, the regional average daily VMT per retail employee is 14.9.¹⁷ Average daily VMT for these land uses is projected to decrease in future 2040 cumulative conditions. Please see Table 1: Daily Vehicle Miles Traveled, which includes the TAZ, 631, in which the project site is located.

¹⁴ To state another way: a tour-based assessment of VMT at a retail site would consider the VMT for all trips in the tour, for any tour with a stop at the retail site. If a single tour stops at two retail locations, for example, a coffee shop on the way to work and a restaurant on the way back home, then both retail locations would be allotted the total tour VMT. A trip-based approach allows us to apportion all retail-related VMT to retail sites without double-counting.

¹⁵ San Francisco Planning Department, *Executive Summary: Resolution Modifying Transportation Impact Analysis*, Appendix F, Attachment A, March 3, 2016.

¹⁶ Includes the VMT generated by the households in the development and averaged across the household population to determine VMT per capita.

¹⁷ For VMT analysis, PDR uses are treated as office uses.

Table 1: Daily Vehicle Miles Traveled

Land Use	Existing			Cumulative 2040		
	Bay Area Regional Average	Bay Area Regional Average minus 15%	TAZ 631	Bay Area Regional Average	Bay Area Regional Average minus 15%	TAZ 631
Households (Residential)	17.2	14.6	2.2	16.1	13.7	1.8
Employment (Retail)	14.9	12.6	9.1	14.6	12.4	8.7

A project would have a significant effect on the environment if it would cause substantial additional VMT. The State Office of Planning and Research's (OPR) *Revised Proposal on Updates to the CEQA Guidelines on Evaluating Transportation Impacts in CEQA* ("proposed transportation impact guidelines") recommends screening criteria to identify types, characteristics, or locations of projects that would not result in significant impacts to VMT. If a project meets one of the three screening criteria provided (Map-Based Screening, Small Projects, and Proximity to Transit Stations), then it is presumed that VMT impacts would be less than significant for the project and a detailed VMT analysis is not required. Map-Based Screening is used to determine if a project site is located within a TAZ that exhibits low levels of VMT. Small Projects are projects that would generate fewer than 100 vehicle trips per day. The Proximity to Transit Stations criterion includes projects that are within a half-mile of an existing major transit stop, have a floor area ratio that is equal to or greater than 0.75, vehicle parking that is less than or equal to that required or allowed by the Planning Code without conditional use authorization, and are consistent with the applicable Sustainable Communities Strategy.

In TAZ 631, the existing average daily household VMT per capita is 2.2, and the existing average daily VMT per retail employee is 9.1.^{18, 19} In TAZ 631, the future 2040 average daily household VMT per capita would be 1.8, and the future 2040 average daily VMT per retail employee would be 8.7.²⁰ Given that the project site is located in an area in which the existing and future 2040 residential and retail employee VMT would be more than 15 percent below the existing and future 2040 regional averages, the proposed project's residential and retail uses would not result in substantial additional VMT, and impacts would be less than significant. Furthermore, the project site meets the Proximity to Transit Stations screening criterion, which also indicates the proposed project's residential uses would not cause substantial additional VMT.²¹

Induced Automobile Travel Analysis

A proposed project would have a significant effect on the environment if it would substantially induce additional automobile travel by increasing physical roadway capacity in congested areas (i.e., by adding new mixed-flow lanes) or by adding new roadways to the network. The OPR's proposed transportation

¹⁸ For VMT screening and analysis, PDR uses are treated like office uses.

¹⁹ San Francisco Planning Department, *Eligibility Checklist for CEQA Section 21099: Modernization of Transportation Analysis, 345 6th Street*, September 26, 2016.

²⁰ *Ibid.*

²¹ *Ibid.*

impact guidelines includes a list of transportation project types that would not likely lead to a substantial or measureable increase in VMT. If a project fits within the general types of projects (including combinations of types), then it is presumed that VMT impacts would be less than significant, and a detailed VMT analysis is not required.

The proposed project is not a transportation project. However, the proposed project would include features that would alter the transportation network. The existing driveway and curb cut on 6th Street would be removed. The proposed project would also include the installation of Class 2 bicycle parking facilities on the 6th Street and Shipley Street sidewalks adjacent to the project site. These features fit within the general types of projects that would not substantially induce automobile travel, and the impacts would be less than significant.²²

Trip Generation

The proposed project consists of demolishing the existing buildings and surface parking lot and constructing a nine-story building containing 102 SRO units and approximately 1,730 gsf of retail space, and 108 bicycle parking spaces.

Localized trip generation of the proposed project was calculated using a trip-based analysis and information in the *2002 Transportation Impacts Analysis Guidelines for Environmental Review* (SF Guidelines) developed by the San Francisco Planning Department.²³ The proposed project would generate an estimated 1,021 person trips (inbound and outbound) on a weekday daily basis, consisting of 327 person trips by auto, 217 transit trips, 343 walk trips and 134 trips by other modes. During the p.m. peak hour, the proposed project would generate an estimated 155 person trips, consisting of 49 person trips by auto (39 vehicle trips accounting for vehicle occupancy data for this census tract), 34 transit trips, 52 walk trips and 20 trips by other modes.

Transit

Eastern Neighborhoods PEIR Mitigation Measures E-5: Enhanced Transit Funding, through E-11: Transportation Demand Management, were adopted as part of the Plan with uncertain feasibility to address significant transit impacts. These measures are not applicable to the proposed project, as they are plan-level mitigation measures to be implemented by City and County agencies. In compliance with a portion of Mitigation Measure E-5, the City adopted impact fees for development in Eastern Neighborhoods that goes towards funding transit and complete streets. In addition, the San Francisco Board of Supervisors approved amendments to the San Francisco Planning Code, referred to as the Transportation Sustainability Fee (TSF), which is codified as Planning Code Section 411A (Ordinance No. 200-154, effective December 25, 2015).²⁴ The fee updated, expanded, and replaced the prior Transit Impact Development Fee, which is in compliance with portions of Mitigation Measure E-5. The City is also currently conducting outreach regarding Mitigation Measure E-5 and Mitigation Measure E-11. Both the TSF and the transportation demand management efforts are part of the Transportation Sustainability Program.²⁵ In compliance with all or portions of Mitigation Measure E-6: Transit Corridor Improvements,

²² *Ibid.*

²³ San Francisco Planning Department, *Transportation Calculations for 345 6th Street*, September 9, 2016.

²⁴ Two additional files were created at the Board of Supervisors for TSF regarding hospitals and health services, grandfathering, and additional fees for larger projects: see Board File Nos. 151121 and 151257.

²⁵ <http://tsp.sfpplanning.org>

Mitigation Measure E-7: Transit Accessibility, Mitigation Measure E-9: Rider Improvements, and Mitigation Measure E-10: Transit Enhancement, the (San Francisco Municipal Transportation Agency (SFMTA) is implementing the Transit Effectiveness Project (TEP), which was approved by the SFMTA Board of Directors in March 2014. The TEP (now called Muni Forward) includes system-wide review, evaluation, and recommendations to improve service and increase transportation efficiency. Examples of transit priority and pedestrian safety improvements within the Eastern Neighborhoods plan area as part of Muni Forward include the 14 Mission Rapid Transit Project, the 22 Fillmore Extension along 16th Street to Mission Bay (expected construction between 2017 and 2020), and the Travel Time Reduction Project on 9 San Bruno bus route (initiation in 2015). In addition, Muni Forward includes service improvements to various routes with the Eastern Neighborhoods plan area (e.g., the implemented new 55 16th Street bus route).

Mitigation Measure E-7 also identifies implementing recommendations of the *Bicycle Plan* and the *Better Streets Plan*. As part of the *Bicycle Plan*, adopted in 2009, a series of minor, near-term, and long-term bicycle facility improvements are planned within the Eastern Neighborhoods, including along 2nd Street, 5th Street, 17th Street, Townsend Street, Illinois Street, and Cesar Chavez Street. The *Better Streets Plan*, adopted in 2010, describes a vision for the future of San Francisco's pedestrian realm and calls for streets that work for all users. The *Better Streets Plan* requirements were codified in Planning Code Section 138.1, and new projects constructed in the Eastern Neighborhoods plan area are subject to varying requirements, dependent on project size. Another effort which addresses transit accessibility, Vision Zero, was adopted by various City agencies in 2014. Vision Zero focuses on building better and safer streets through education, evaluation, enforcement, and engineering. The goal is to eliminate all traffic fatalities by 2024. Vision Zero projects within the Eastern Neighborhoods plan area include pedestrian intersection treatments along Mission Street from 18th to 23rd streets, the Potrero Avenue Streetscape Project from Division to Cesar Chavez streets, and the Howard Street Pilot Project, which includes pedestrian intersection treatments from 4th to 6th streets.

The project site is well served by public transportation. Within one-quarter mile of the project site, the San Francisco Municipal Railway (Muni) operates the following bus lines: the 8 Bayshore, 8AX Bayshore A Express, 8BX Bayshore B Express, 12 Folsom/Pacific, 19 Polk, 27 Bryant, 30 Stockton, 45 Union/Stockton, and the 47 Van Ness.

The proposed project would be expected to generate 217 daily transit trips, including 34 during the p.m. peak hour. Given the wide availability of nearby transit, the addition of 34 p.m. peak-hour transit trips would be accommodated by existing capacity. As such, the proposed project would not result in unacceptable levels of transit service or cause a substantial increase in delays or operating costs such that significant adverse impacts in transit service could result.

Each of the rezoning options in the Eastern Neighborhoods PEIR identified significant and unavoidable cumulative impacts related to increases in transit ridership on Muni lines, with the Preferred Project having significant impacts on seven lines. The project site is within one-quarter mile of one of these seven affected lines (the 27 Bryant). The proposed project would not contribute considerably to these conditions as its minor contribution of 34 p.m. peak-hour transit trips would not be a substantial proportion of the overall additional transit volume generated by Eastern Neighborhood projects. The proposed project would also not contribute considerably to 2025 cumulative transit conditions and thus would not result in any significant cumulative transit impacts.

Conclusion

For these reasons, the proposed project would not result in significant impacts related to transportation and circulation that were not identified in the Eastern Neighborhoods PEIR and would not contribute considerably to cumulative transportation and circulation impacts that were identified in the Eastern Neighborhoods PEIR.

<u>Topics:</u>	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
5. NOISE—Would the project:				
a) Result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) For a project located within an airport land use plan area, or, where such a plan has not been adopted, in an area within two miles of a public airport or public use airport, would the project expose people residing or working in the area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project located in the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Be substantially affected by existing noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Eastern Neighborhoods PEIR determined that implementation of the Eastern Neighborhoods Rezoning and Area Plans would result in significant noise impacts during construction activities and due to conflicts between noise-sensitive uses in proximity to noisy uses such as PDR, retail, entertainment, cultural/institutional/educational uses, and office uses. The Eastern Neighborhoods PEIR also determined that incremental increases in traffic-related noise attributable to implementation of the Eastern Neighborhoods Rezoning and Area Plans would be less than significant. The Eastern Neighborhoods PEIR identified six noise mitigation measures, three of which may be applicable to subsequent development projects.²⁶ These mitigation measures would reduce noise impacts from construction and noisy land uses to less-than-significant levels.

²⁶ Eastern Neighborhoods PEIR Mitigation Measures F-3, F-4, and F-6 address the siting of sensitive land uses in noisy environments. In a decision issued on December 17, 2015, the California Supreme Court held that CEQA does not generally require an agency to consider the effects of existing environmental conditions on a proposed

Construction Noise

The Eastern Neighborhoods PEIR includes two mitigation measures that address impacts from construction noise. PEIR Mitigation Measure F-1: Construction Noise (Pile Driving), addresses noise impacts related to pile driving. The proposed building would be supported by deep piers with a mat slab. In the event that piles are used, PEIR Mitigation Measure F-1, which is identified as Project Mitigation Measure 2 and is discussed on p. 54, would be applicable to the proposed project. PEIR Mitigation Measure F-2: Construction Noise, requires the development of a noise attenuation plan and the implementation of noise attenuation measures to minimize noise impacts from construction activities. PEIR Mitigation Measure F-2, which is applicable to the proposed project, is identified as Project Mitigation Measure 3 and discussed on p. 54.

In addition, all construction activities for the proposed project (approximately 16 months) would be subject to and required to comply with the San Francisco Noise Ordinance (Noise Ordinance), which is codified as Article 29 of the San Francisco Police Code. The Noise Ordinance regulates construction noise and requires that construction work be conducted in the following manner: (1) noise levels of construction equipment, other than impact tools, must not exceed 80 dBA²⁷ at a distance of 100 feet from the source (the equipment generating the noise); (2) impact tools must have intake and exhaust mufflers that are approved by the Director of San Francisco Public Works (SFPW) or the Director of the Department of Building Inspection (DBI) to best accomplish maximum noise reduction; and (3) if the noise from the construction work would exceed the ambient noise levels at the site property line by 5 dBA, the work must not be conducted between 8:00 p.m. and 7:00 a.m. unless the Director of SFPW authorizes a special permit for conducting the work during that period.

The DBI is responsible for enforcing the Noise Ordinance for private construction projects during normal business hours (8:00 a.m. to 5:00 p.m.), and the Police Department is responsible for enforcing the Noise Ordinance during all other hours. Nonetheless, during the approximately 16-month construction period for the proposed project, occupants of nearby properties could be disturbed by construction noise. There may be times when construction noise could interfere with indoor activities in residences and businesses near the project site. The increase in project-related construction noise in the project vicinity would not be considered a significant impact of the proposed project, because the construction noise would be temporary (approximately 16 months), intermittent, and restricted in occurrence and level. In addition, the construction contractor would be required to comply with the Noise Ordinance and PEIR Mitigation Measure F-2, which would reduce construction noise impacts to less-than-significant levels.

project's future users or residents except where a project or its residents may exacerbate existing environmental hazards (California Building Industry Association v. Bay Area Air Quality Management District, December 17, 2015, Case No. S213478. Available at: <http://www.courts.ca.gov/opinions/documents/S213478.PDF>). As noted above, the Eastern Neighborhoods PEIR determined that incremental increases in traffic-related noise attributable to implementation of the Eastern Neighborhoods Rezoning and Area Plans would be less than significant and thus would not exacerbate the existing noise environment. Therefore, Eastern Neighborhoods Mitigation Measures F-3, F-4, and F-6 are not applicable. Nonetheless, for all noise sensitive uses, the general requirements for adequate interior noise levels of Mitigation Measures F-3 and F-4 are met by compliance with the acoustical standards required under the California Building Standards Code (California Code of Regulations Title 24).

²⁷ The standard method used to quantify environmental noise involves evaluating the sound with an adjustment to reflect the fact that human hearing is less sensitive to low-frequency sound than to mid- and high-frequency sound. This measurement adjustment is called "A" weighting, and the data are reported in A-weighted decibels (dBA).

Operational Noise

PEIR Mitigation Measure F-5: Siting of Noise-Generating Uses, addresses impacts related to individual development projects that include new noise-generating uses that would be expected to generate noise levels in excess of ambient noise levels in the respective project vicinities. The proposed project would result in the development of residential uses and approximately 1,730 gsf of retail space on the project site, but these uses are not expected to generate noise levels in excess of existing ambient noise levels in the project vicinity. The proposed project would include the installation of mechanical equipment, such as heating and ventilation systems, that could produce operational noise, but this equipment would be required to comply with the standards set forth in the Noise Ordinance. The proposed project does not include the installation of a backup diesel generator. Therefore, PEIR Mitigation Measure F-5 is not applicable to the proposed project.

The proposed project would be subject to the California Building Standards Code (Title 24 of the California Code of Regulations), which establishes uniform noise insulation standards. The Title 24 acoustical standards for residential structures are incorporated into Section 1207 of the San Francisco Building Code and require that these structures be designed to prevent the intrusion of exterior noise so that the noise level attributable to exterior sources, with the windows closed, shall not exceed 45 dBA in any habitable room. The Title 24 acoustical standards for nonresidential structures are incorporated into the San Francisco Green Building Code. Title 24 allows the project sponsor to choose between a prescriptive or performance-based acoustical standard for nonresidential structures. Pursuant to the Title 24 acoustical standards, all building wall, floor/ceiling, and window assemblies are required to meet certain sound transmission class or outdoor-indoor sound transmission class ratings to ensure that adequate interior noise levels are achieved. In compliance with Title 24, the DBI would review the final building plans to ensure that the building wall, floor/ceiling, and window assemblies meet Title 24 acoustical requirements. If determined necessary by the DBI, a detailed acoustical analysis of the exterior wall and window assemblies may be required.

Additionally, the proposed project would be subject to the Noise Regulations Relating to Residential Uses Near Places of Entertainment (Ordinance No. 70-15, effective June 19, 2015). The intent of these regulations is to address the compatibility of new residential development with existing noise-generating uses. Any residential development proposed in proximity to highways, country roads, city streets, railroads, rapid transit lines, airports, nighttime entertainment venues, or industrial areas, shall be designed to prevent the intrusion of noise levels beyond those prescribed in the noise regulations. Any residential development proposed in an area in which the L_{dn}^{28} or the community noise equivalent level exceeds 60 dB shall require an acoustical analysis with the building permit application showing that the proposed design will limit exterior noise to 45 dB in any habitable room. Furthermore, the regulations require the Planning Department and Planning Commission to consider the compatibility of uses when approving residential uses adjacent to or near existing permitted places of entertainment and take all reasonably available means through the City's design review and approval processes to ensure that the design of new residential development projects accounts for the needs and interests of both the places of entertainment and the future residents of the new development.

²⁸ The L_{dn} is the L_{eq} , or Energy Equivalent Level, of the A-weighted noise level over a 24-hour period, obtained after the addition of 10 dB to sound levels during nighttime hours (10:00 p.m. to 7:00 a.m.). The L_{eq} is the level of a steady noise which would have the same energy as the fluctuating noise level integrated over the time period of interest.

The project site is not located within an airport land use plan area, within two miles of a public airport, or in the vicinity of a private airstrip. Therefore, CPE Checklist Topics 5e and 5f are not applicable.

For these reasons, the proposed project would not result in significant noise impacts beyond those identified in the Eastern Neighborhoods PEIR.

<i>Topics:</i>	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
6. AIR QUALITY—Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal, state, or regional ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Create objectionable odors affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Eastern Neighborhoods PEIR identified potentially significant air quality impacts resulting from construction activities and impacts on sensitive land uses²⁹ as a result of exposure to elevated levels of diesel particulate matter (DPM) and other toxic air contaminants (TACs). The Eastern Neighborhoods PEIR identified four mitigation measures that would reduce these air quality impacts to less-than-significant levels and stated that with implementation of identified mitigation measures, the Area Plan would be consistent with the *Bay Area 2005 Ozone Strategy*, which was the applicable air quality plan at that time. All other air quality impacts were found to be less than significant.

Construction Dust Control

PEIR Mitigation Measure G-1: Construction Air Quality, requires individual projects involving construction activities to include dust control measures and to maintain and operate construction equipment so as to minimize exhaust emissions of particulates and other pollutants. The San Francisco Board of Supervisors approved a series of amendments to the San Francisco Building and Health Codes, generally referred to as the Construction Dust Control Ordinance (Ordinance No.176-08, effective August 29, 2008). The intent of this ordinance is to reduce the quantity of fugitive dust generated during site preparation, demolition, and construction work in order to protect the health of the general public

²⁹ The Bay Area Air Quality Management District considers sensitive receptors as: children, adults or seniors occupying or residing in: 1) residential dwellings, including apartments, houses, condominiums, 2) schools, colleges, and universities, 3) daycares, 4) hospitals, and 5) senior care facilities. BAAQMD, *Recommended Methods for Screening and Modeling Local Risks and Hazards*, May 2011, p. 12.

and of on-site workers, to minimize public nuisance complaints, and to avoid orders to stop work by the Department of Building Inspection (DBI). Project-related construction activities would result in construction dust, primarily from ground-disturbing activities. In compliance with the Construction Dust Control Ordinance, the project sponsor and contractor responsible for construction activities at the project site would be required to control construction dust on the site through a combination of watering disturbed areas, covering stockpiled materials, sweeping streets and sidewalks, and other measures.

The regulations and procedures set forth in the Construction Dust Control Ordinance would ensure that construction dust impacts would not be significant. These requirements supersede the dust control provisions of PEIR Mitigation Measure G-1. Therefore, the portion of PEIR Mitigation Measure G-1 that addresses dust control is no longer applicable to the proposed project.

Criteria Air Pollutants

While the Eastern Neighborhoods PEIR determined that at a program-level the Eastern Neighborhoods Rezoning and Area Plans would not result in significant regional air quality impacts, the PEIR states that “Individual development projects undertaken in the future pursuant to the new zoning and area plans would be subject to a significance determination based on the BAAQMD’s quantitative thresholds for individual projects.”³⁰ The BAAQMD’s *CEQA Air Quality Guidelines (Air Quality Guidelines)* provide screening criteria³¹ for determining whether a project’s criteria air pollutant emissions would violate an air quality standard, contribute to an existing or projected air quality violation, or result in a cumulatively considerable net increase in criteria air pollutants. Pursuant to the *Air Quality Guidelines*, projects that meet the screening criteria do not have a significant impact related to criteria air pollutants. Criteria air pollutant emissions during construction and operation of the proposed project would meet the Air Quality Guidelines screening criteria. The proposed project, with 102 SRO units, is below both the construction screening criterion and the operational screening criterion for the “apartment, mid-rise” land use type. Therefore, the proposed project would not have a significant impact related to criteria air pollutants, and a detailed air quality assessment is not required.

Health Risk

Since certification of the PEIR, the San Francisco Board of Supervisors approved a series of amendments to the San Francisco Building and Health Codes (Ordinance No. 224-14, effective December 7, 2014), generally referred to as Health Code Article 38: Enhanced Ventilation Required for Urban Infill Sensitive Use Developments (Article 38). The Air Pollutant Exposure Zone (APEZ), as defined in Article 38, consists of areas that, based on modeling of all known air pollutant sources, exceed health protective standards for cumulative PM_{2.5} (fine particulate matter) concentration and cumulative excess cancer risk. The APEZ incorporates health vulnerability factors and proximity to freeways. For sensitive use projects within the APEZ, such as the proposed project, the ordinance requires that the project sponsor submit an Enhanced Ventilation Proposal for approval by the Department of Public Health (DPH) that achieves protection from PM_{2.5} equivalent to that associated with a Minimum Efficiency Reporting Value 13 filtration. The DBI will not issue a building permit without written notification from the Director of the

³⁰ San Francisco Planning Department, *Eastern Neighborhoods Rezoning and Area Plans Final Environmental Impact Report*, Case No. 2004.0160E, certified August 7, 2008, p. 346. Available online at: http://sf-planning.org/sites/default/files/FileCenter/Documents/4003-EN_Final-EIR_Part-7_Trans-Noise-AQ.pdf, accessed October 13, 2016.

³¹ Bay Area Air Quality Management District, *CEQA Air Quality Guidelines*, updated May 2011, pp. 3-2 to 3-3.

DPH that the applicant has an approved Enhanced Ventilation Proposal. In compliance with Article 38, the project sponsor submitted an initial application to DPH.³²

Construction

The project site is located within an identified APEZ; therefore, the ambient health risk to sensitive receptors from air pollutants is considered substantial. The proposed project would require heavy-duty off-road diesel vehicles and equipment during the first four to six months of the anticipated 16-month construction period. Thus, Project Mitigation Measure 4: Construction Air Quality, has been identified to implement the portions of PEIR Mitigation Measure G-1 related to emissions exhaust by requiring engines with higher emissions standards on construction equipment. Project Mitigation Measure 4 would reduce DPM exhaust from construction equipment by 89 to 94 percent compared to uncontrolled construction equipment.³³ Therefore, impacts related to construction health risks would be less than significant through implementation of Project Mitigation Measure 4, which is discussed on pp. 54-56.

Siting New Sources

The proposed project would not be expected to generate 100 truck trips per day or 40 refrigerated truck trips per day, so PEIR Mitigation Measure G-3: Siting of Uses that Emit DPM, is not applicable. The proposed project would not include a backup diesel generator, so PEIR Mitigation Measure G-4: Siting of Uses that Emit Other TACs, is not applicable.

Conclusion

For these reasons, the proposed project would not result in significant air quality impacts that were not identified in the Eastern Neighborhoods PEIR.

³² *Application for Article 38 Compliance Assessment, 345 6th Street*, submitted June 30, 2015.

³³ PM emissions benefits are estimated by comparing off-road PM emission standards for Tier 2 with Tier 1 and 0. Tier 0 off-road engines do not have PM emission standards, but the United States Environmental Protection Agency's Exhaust and Crankcase Emissions Factors for Nonroad Engine Modeling – Compression Ignition has estimated Tier 0 engines between 50 hp and 100 hp to have a PM emission factor of 0.72 g/hp-hr and greater than 100 hp to have a PM emission factor of 0.40 g/hp-hr. Therefore, requiring off-road equipment to have at least a Tier 2 engine would result in between a 25 percent and 63 percent reduction in PM emissions, as compared to off-road equipment with Tier 0 or Tier 1 engines. The 25 percent reduction comes from comparing the PM emission standards for off-road engines between 25 hp and 50 hp for Tier 2 (0.45 g/bhp-hr) and Tier 1 (0.60 g/bhp-hr). The 63 percent reduction comes from comparing the PM emission standards for off-road engines above 175 hp for Tier 2 (0.15 g/bhp-hr) and Tier 0 (0.40 g/bhp-hr). In addition to the Tier 2 requirement, ARB Level 3 VDECSs are required and would reduce PM by an additional 85 percent. Therefore, the mitigation measure would result in between an 89 percent (0.0675 g/bhp-hr) and 94 percent (0.0225 g/bhp-hr) reduction in PM emissions, as compared to equipment with Tier 1 (0.60 g/bhp-hr) or Tier 0 engines (0.40 g/bhp-hr).

<u>Topics:</u>	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
7. GREENHOUSE GAS EMISSIONS—				
Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Eastern Neighborhoods PEIR

The Eastern Neighborhoods PEIR assessed the greenhouse gas (GHG) emissions that could result from rezoning of the Mission Area Plan under the three rezoning options. The Eastern Neighborhoods Rezoning Options A, B, and C are anticipated to result in GHG emissions on the order of 4.2, 4.3 and 4.5 metric tons of carbon dioxide equivalent (CO₂E) per service population, respectively.³⁴ The Eastern Neighborhoods PEIR concluded that the resulting GHG emissions from the three rezoning options would be less than significant. No mitigation measures were identified in the PEIR.

Proposed Project

The Bay Area Air Quality Management District (BAAQMD) has prepared guidelines and methodologies for analyzing GHG emissions. These guidelines are consistent with CEQA Guidelines Sections 15064.4 and 15183.5, which address the analysis and determination of significant impacts from a proposed project’s GHG emissions and allow for projects that are consistent with an adopted GHG reduction strategy to conclude that the project’s GHG impact would be less than significant. San Francisco’s *Strategies to Address Greenhouse Gas Emissions*³⁵ presents a comprehensive assessment of policies, programs, and ordinances that collectively represent San Francisco’s GHG reduction strategy in compliance with the BAAQMD and CEQA guidelines. These GHG reduction actions have resulted in a 23.3 percent reduction in GHG emissions in 2012 compared to 1990 levels,³⁶ exceeding the year 2020 reduction goals outlined in the BAAQMD’s *2010 Clean Air Plan*,³⁷ Executive Order S-3-05,³⁸ and Assembly

³⁴ San Francisco Planning Department, *Greenhouse Gas Analysis for Community Plan Exemptions in Eastern Neighborhoods*, April 20, 2010. This memorandum provides an overview of the GHG analysis conducted for the Eastern Neighborhoods PEIR and estimates GHG emissions using a service population (equivalent of total number of residents and employees) metric.

Available at http://sfenvironment.org/sites/default/files/fliers/files/icf_verificationmemo_2012sfcommunityinventory_2015-01-21.pdf, accessed March 16, 2015.

³⁷ Bay Area Air Quality Management District, *Clean Air Plan*, September 2010. Available at <http://www.baaqmd.gov/plans-and-climate/air-quality-plans/current-plans>, accessed March 3, 2016.

³⁸ Office of the Governor, Executive Order S-3-05, June 1, 2005. Available at <https://www.gov.ca.gov/news.php?id=1861>, accessed March 3, 2016.

Bill 32 (also known as the Global Warming Solutions Act).^{39, 40} In addition, San Francisco's GHG reduction goals are consistent with, or more aggressive than, the long-term goals established under Executive Orders S-3-05⁴¹ and B-30-15.^{42, 43} Therefore, projects that are consistent with San Francisco's GHG reduction strategy would not result in GHG emissions that would have a significant effect on the environment and would not conflict with state, regional, and local GHG reduction plans and regulations.

The proposed project would increase the intensity of use of the project site by introducing 102 SRO units and approximately 1,730 gsf of retail space with no parking spaces to replace a surface parking lot for about 35 vehicles. Therefore, the proposed project would contribute to annual long-term increases in GHGs as a result of residential and retail operations that result in an increase in energy use, water use, wastewater treatment, and solid waste disposal. Construction activities would also result in temporary increases in GHG emissions. The existing surface parking lot on the project site generates daily and p.m. peak-hour vehicle trips. It is possible that the proposed project, with fewer parking spaces, would generate fewer daily and p.m. peak-hour vehicle trips than the existing surface parking lot, resulting in a decrease in GHG emissions associated with vehicle trips (mobile sources).

The proposed project would be subject to regulations adopted to reduce GHG emissions as identified in the GHG reduction strategy. As discussed below, compliance with the applicable regulations would reduce the project's GHG emissions related to transportation, energy use, waste disposal, wood burning, and use of refrigerants.

Compliance with the City's Commuter Benefits Program, Emergency Ride Home Program, and bicycle parking requirements, would reduce the proposed project's transportation-related GHG emissions. These regulations reduce GHG emissions from single-occupancy vehicles by promoting the use of alternative transportation modes with zero or lower GHG emissions on a per capita basis.

The proposed project would be required to comply with the energy efficiency requirements of the City's Green Building Code, the Stormwater Management Ordinance, and the Residential Water Conservation Ordinance, all of which would promote energy and water efficiency, thereby reducing the proposed

³⁹ California Legislative Information, Assembly Bill 32, September 27, 2006. Available at [http://www.leginfo.ca.gov/pub/05-06/bill/asm/ab_0001-0050/ab_32_bill_20060927_chaptered.pdf](http://www.leginfo.ca.gov/pub/05-06/bill/asm/ab_0001-0050/ab_0001-0050_ab_32_bill_20060927_chaptered.pdf), accessed March 3, 2016.

⁴⁰ Executive Order S-3-05, Assembly Bill 32, and the Bay Area 2010 Clean Air Plan set a target of reducing GHG emissions to below 1990 levels by year 2020.

⁴¹ Executive Order S-3-05 sets forth a series of target dates by which statewide emissions of GHGs need to be progressively reduced, as follows: by 2010, reduce GHG emissions to 2000 levels (approximately 457 million metric tons of carbon dioxide equivalent (MTCO₂E)); by 2020, reduce emissions to 1990 levels (approximately 427 million MTCO₂E); and by 2050, reduce emissions to 80 percent below 1990 levels (approximately 85 million MTCO₂E). Because of the differential heat absorption potential of various GHGs, GHG emissions are frequently measured in "carbon dioxide-equivalent," which present a weighted average based on each gas's heat absorption (or "global warming") potential.

⁴² Office of the Governor, Executive Order B-30-15, April 29, 2015. Available at <https://www.gov.ca.gov/news.php?id=18938>, accessed March 3, 2016. Executive Order B-30-15 sets a state GHG emissions reduction goal of 40 percent below 1990 levels by the year 2030.

⁴³ San Francisco's GHG reduction goals are codified in Section 902 of the Environment Code and include: (i) by 2008, determine City GHG emissions for year 1990; (ii) by 2017, reduce GHG emissions by 25 percent below 1990 levels; (iii) by 2025, reduce GHG emissions by 40 percent below 1990 levels; and by 2050, reduce GHG emissions by 80 percent below 1990 levels.

project’s energy-related GHG emissions.⁴⁴ Additionally, the project would be required to meet the renewable energy criteria of the Green Building Code, further reducing the project’s energy-related GHG emissions.

The proposed project’s waste-related emissions would be reduced through compliance with the City’s Recycling and Composting Ordinance, Construction and Demolition Debris Recovery Ordinance, and Green Building Code requirements. These regulations reduce the amount of materials sent to a landfill, reducing GHGs emitted by landfill operations. These regulations also promote reuse of materials, conserving their embodied energy⁴⁵ and reducing the energy required to produce new materials.

Compliance with the City’s street tree planting requirements would serve to increase carbon sequestration. Regulations requiring low-emitting finishes would reduce volatile organic compounds (VOCs).⁴⁶ Thus, the proposed project was determined to be consistent with San Francisco’s GHG reduction strategy.⁴⁷

Therefore, the proposed project’s GHG emissions would not conflict with state, regional, and local GHG reduction plans and regulations. Furthermore, the proposed project is within the scope of the development evaluated in the PEIR and would not result in impacts associated with GHG emissions beyond those disclosed in the PEIR. For these reasons, the proposed project would not result in significant GHG emissions that were not identified in the Eastern Neighborhoods PEIR, and no mitigation measures are necessary.

<i>Topics:</i>	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
8. WIND AND SHADOW—Would the project:				
a) Alter wind in a manner that substantially affects public areas?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Create new shadow in a manner that substantially affects outdoor recreation facilities or other public areas?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

⁴⁴ Compliance with water conservation measures reduce the energy (and GHG emissions) required to convey, pump and treat water required for the project.

⁴⁵ Embodied energy is the total energy required for the extraction, processing, manufacture, and delivery of building materials to the building site.

⁴⁶ While not a GHG, VOCs are precursor pollutants that form ground-level ozone. Increased ground-level ozone is an anticipated effect of future global warming that would result in added health effects locally. Reducing VOC emissions would reduce the anticipated local effects of global warming.

⁴⁷ San Francisco Planning Department, *Greenhouse Gas Analysis: Compliance Checklist for 345 6th Street*, October 12, 2016.

Wind

Based upon experience of the Planning Department in reviewing wind analyses and expert opinion on other projects, it is generally the case that projects less than 80 feet in height would not have the potential to result in significant wind impacts. The new height limits proposed under the Eastern Neighborhoods Rezoning and Area Plans would generally not exceed 80 feet. A few locations throughout the Plan Area already have existing height limits of 130 feet, but no new locations with height limits of 130 feet were proposed. For these reasons, the Eastern Neighborhoods PEIR determined that, at a programmatic level, the Eastern Neighborhoods Rezoning and Area Plans would not result in significant wind impacts. No mitigation measures were identified in the PEIR. Individual development projects proposed under the Eastern Neighborhoods Rezoning and Area Plans must still be assessed to ensure that they would not result in significant project-level wind impacts.

At a height of 85 feet (101 feet at the building's tallest point), the proposed project would be about 35 feet taller than the three existing 50-foot-tall buildings on the west side of 6th Street across from the project site. These existing buildings would largely shelter the proposed project from southwesterly and westerly winds. Any winds that reach the proposed project's 6th Street façade would be reduced in speed due to the sheltering effect. For this reason, winds that are intercepted by the proposed project's 6th Street façade and redirected downward to the sidewalk along 6th Street would not be strong or turbulent.⁴⁸ The property on the north side of Shipley Street across from the project site is a surface parking lot that would not shelter the proposed project from westerly and northwesterly winds. However, the proposed project's Shipley Street façade includes setbacks at the upper floors. Any overhead winds that are intercepted by the proposed project's Shipley Street façade would be dispersed in different directions at these higher elevations instead of being redirected downward to the sidewalk along Shipley Street.⁴⁹

For these reasons, the proposed project would not result in any significant wind impacts beyond those identified in the Eastern Neighborhoods PEIR.

Shadow

Planning Code Section 295 generally prohibits new structures above 40 feet in height that would cast additional shadows on open space that is under the jurisdiction of the San Francisco Recreation and Park Commission between one hour after sunrise and one hour before sunset, at any time of the year, unless that shadow would not result in a significant adverse effect on the use of the open space. Under the Eastern Neighborhoods Rezoning and Area Plans, some sites surrounding parks could be redeveloped with taller buildings, because some parks are not subject to the provisions of Section 295 (i.e., some parks are under the jurisdiction of agencies other than the Recreation and Park Commission or are privately owned). The Eastern Neighborhoods PEIR could not conclude if the Eastern Neighborhoods Rezoning and Area Plans would result in less-than-significant shadow impacts, because the feasibility of complete mitigation for the potential new shadow impacts of unknown development proposals could not be determined at that time. Therefore, the PEIR determined that the shadow impacts would be significant and unavoidable. No mitigation measures were identified in the PEIR.

⁴⁸ Don Ballanti, *Wind Comfort Study for the 345 6th Street Project, San Francisco* (hereinafter "Wind Comfort Study"), December 23, 2013, p. 3.

⁴⁹ *Wind Comfort Study*, p. 3.

Implementation of the proposed project would result in the construction of a nine-story, 85-foot-tall building (101 feet at the building's tallest point). The Planning Department prepared a preliminary shadow fan analysis and determined that the proposed project has the potential to cast shadow on Victoria Manalo Draves Park in the morning during the summer and on the Gene Friend Recreation Center (formerly known as South of Market Park) in the morning during the autumn, winter, and spring.^{50, 51} Both parks are under the jurisdiction of the Recreation and Park Commission and are subject to Planning Code Section 295.

As part of the implementation of Planning Code Section 295, on February 7, 1989, the Planning Commission and the Recreation and Park Commission adopted a joint resolution establishing criteria for determining the significance of shadow cast by future development projects on 14 downtown parks.⁵² These criteria established an absolute cumulative limit (ACL) for net new shadow that could be cast on each of these parks as well as qualitative criteria for allocating the additional net new shadow to individual development projects. The ACL for a particular park is expressed as a percentage of the theoretical annual available sunlight (TAAS) on that park. No ACL was established for Victoria Manalo Draves Park, which did not exist in 1989. The ACL for the Gene Friend Recreation Center was set at zero percent, meaning that no net new shadow could be cast on the park by future development projects.

A more detailed shadow analysis⁵³ confirmed that the proposed project would not cast net new shadow on Victoria Manalo Draves Park at any time during the year. The proposed project's shadow would be blocked by existing buildings located between the project site and the park or would be masked by existing shadows cast by existing buildings.

The Gene Friend Recreation Center is an approximately one-acre park on the northwest corner of 6th and Folsom streets. There is a 24- to 34-foot-tall recreation center building along the park's 6th Street frontage; the recreation center building contains a gymnasium, weight room, activity room, and auditorium. The southern third of the park is occupied by a lawn with paved walkways, and there is a children's playground and an outdoor basketball court along the park's Harriet Street frontage. The park is enclosed by a nine-foot-tall wrought iron fence, and there are three gates: one on 6th Street, one at the corner of 6th and Folsom streets, and one on Harriet Street. The park is open Tuesday through Friday from 9:00 a.m. until 9:00 p.m., Saturday from 9:00 a.m. until 9:00 p.m., and closed on Sunday and Monday. When the park is closed, the gates are locked, and the park is not accessible to the public.

The shadow analysis⁵⁴ indicated that the Gene Friend Recreation Center receives about 166,041,425 square-foot-hours (sfh) of TAAS. Of this total, existing shadows account for about 79,074,104 sfh or 47.62 percent of the TAAS. On an annual basis, the proposed project would cast about 65,909 sfh of net new shadow on the park, which is the equivalent of 0.04 percent of the TAAS. The net

⁵⁰ A shadow fan is a diagram that shows the maximum potential reach of project shadow, without accounting for intervening buildings that could block the shadow, over the course of an entire year (from one hour after sunrise until one hour before sunset on each day of the year) in relation to the locations of nearby open spaces, recreation facilities, and parks.

⁵¹ San Francisco Planning Department, *345 6th Street Shadow Fan*, September 27, 2016.

⁵² San Francisco Planning Commission Resolution No. 11595, February 7, 1989.

⁵³ CADP, *345 6th Street Shadow Analysis* (hereinafter "*Shadow Analysis*"), October 17, 2016.

⁵⁴ *Ibid.*

new project shadow would increase the shadow load on the park from 47.62 percent of the TAAS to 47.66 percent of the TAAS.

The proposed project would cast net new shadow on the Gene Friend Recreation Center in the morning from early September through mid-November and from mid-January through early April.⁵⁵ No net new project shadow would reach the park from mid-November through mid-January or from early April through early September. Depending on the time of year, the net new project shadow on the park would begin as early as 7:30 a.m. or as late as 8:16 a.m.⁵⁶ The net new project shadow would last no longer than 27 minutes on any day and would move off the park by 8:45 a.m., about 15 minutes before the park opens at 9:00 a.m.⁵⁷ The proposed project would not cast net new shadow on the park after 8:45 a.m. on any day of the year.

The maximum shadow in terms of area would occur on October 4 and March 8, when the net new project shadow would cover about 6,202 sf.⁵⁸ The maximum shadow in terms of duration would also occur on October 4 and March 8, when the net new project shadow would last about 27 minutes.⁵⁹ The net new project shadow would fall on the lawn and paved walkways at the southern end of the park during a time of day when the park is not open to the public, so the net new project shadow would not adversely affect the public's ability to use the park. For these reasons, the proposed project would not create new shadow in a manner that substantially affects an outdoor recreation facility.

Since the Gene Friend Recreation Center has an ACL of zero percent net new shadow, implementation of the proposed project would require the Planning Commission and the Recreation and Park Commission to increase the ACL for the park.

The proposed project would shade portions of nearby streets, sidewalks, and private properties in the project vicinity at different times of day throughout the year. Shadows on streets and sidewalks would be transitory in nature, would not exceed levels commonly expected in urban areas, and would be considered a less-than-significant impact under CEQA. Although occupants of nearby properties may regard the increase in shadow as undesirable, the limited increase in shading of private properties as a result of the proposed project would be considered a less-than-significant impact under CEQA.

For these reasons, the proposed project would not result in significant shadow impacts beyond those identified in the Eastern Neighborhoods PEIR.

<u>Topics:</u>	<u>Significant Impact Peculiar to Project or Project Site</u>	<u>Significant Impact not Identified in PEIR</u>	<u>Significant Impact due to Substantial New Information</u>	<u>No Significant Impact not Previously Identified in PEIR</u>
9. RECREATION—Would the project:				
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Physically degrade existing recreational resources?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Eastern Neighborhoods PEIR concluded that implementation of the Eastern Neighborhoods Rezoning and Area Plans would not result in substantial or accelerated deterioration of existing recreational resources or require the construction or expansion of recreational facilities that may have an adverse effect on the environment. No mitigation measures related to recreational resources were identified in the Eastern Neighborhoods PEIR. However, the PEIR identified Improvement Measure H-1: Support for Upgrades to Existing Recreation Facilities. This improvement measure calls for the City to implement funding mechanisms for an ongoing program to repair, upgrade and adequately maintain park and recreation facilities to ensure the safety of users.

As part of the adoption of the Eastern Neighborhoods Rezoning and Area Plans, the City adopted impact fees for development in Eastern Neighborhoods that goes toward funding recreation and open space. Since certification of the PEIR, the voters of San Francisco passed the 2012 San Francisco Clean and Safe Neighborhood Parks Bond, providing the Recreation and Park Department an additional \$195 million to continue capital projects for the renovation and repair of park, recreation, and open space assets. This funding is being utilized for improvements and expansion to Garfield Square, South Park, the Potrero Hill Recreation Center, Warm Water Cove Park, and the Pier 70 Parks Shoreline within the Eastern Neighborhoods Plan area. The impact fees and the 2012 San Francisco Clean and Safe Neighborhood Parks Bond are funding measures similar to that described in PEIR Improvement Measure H-1: Support for Upgrades to Existing Recreation Facilities.

An update of the Recreation and Open Space Element (ROSE) of the *General Plan* was adopted in April 2014. The amended ROSE provides a 20-year vision for open spaces in the City. It includes information and policies about accessing, acquiring, funding, and managing open spaces in San Francisco. The amended ROSE identifies areas within the Eastern Neighborhoods Plan area for acquisition and locations where new open spaces and open space connections should be constructed, consistent with PEIR Improvement Measure H-2: Support for New Open Space. Two of these open spaces, Daggett Park and at 17th and Folsom streets, are both set to open in 2016. In addition, the amended ROSE identifies the role of both the *Better Streets Plan* and the Green Connections Network in open space and recreation. Green Connections are special streets and paths that connect people to parks, open spaces, and the waterfront, while enhancing the ecology of the street environment. Six routes identified within the Green Connections Network cross the Eastern Neighborhoods Plan area: Mission to Peaks (Route 6); Noe Valley to Central Waterfront (Route 8), a portion of which has been conceptually

designed; Tenderloin to Potrero (Route 18); Downtown to Mission Bay (Route 19); Folsom, Mission Creek to McLaren (Route 20); and Shoreline (Route 24).

Furthermore, the Planning Code requires a specified amount of new usable open space (either private or common) for each new residential unit. Some developments are also required to provide privately owned, publicly accessible open spaces. The Planning Code open space requirements would help offset some of the additional open space needs generated by increased residential population in the Eastern Neighborhoods Plan area.

The proposed project would provide usable open space in the form of private balconies and decks on the fourth through seventh floors and common decks on the eighth floor and the roof. This usable open space would help alleviate the demand for recreational facilities.

As the proposed project does not degrade recreational facilities and is within the scope of development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional impacts on recreation beyond those analyzed in the Eastern Neighborhoods PEIR.

<u>Topics:</u>	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
10. UTILITIES AND SERVICE SYSTEMS—Would the project:				
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Have sufficient water supply available to serve the project from existing entitlements and resources, or require new or expanded water supply resources or entitlements?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Result in a determination by the wastewater treatment provider that would serve the project that it has inadequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Comply with federal, state, and local statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Eastern Neighborhoods PEIR determined that the anticipated increase in population would not result in a significant impact to the provision of water, wastewater collection and treatment, and solid waste collection and disposal. No mitigation measures were identified in the PEIR.

Since certification of the PEIR, the San Francisco Public Utilities Commission (SFPUC) adopted the *2010 Urban Water Management Plan (UWMP)* in June 2011. The UWMP update includes citywide demand projections to the year 2035, compares available water supplies to meet demand, and presents water demand management measures to reduce long-term water demand. Additionally, the UWMP update includes a discussion of the conservation requirement set forth in Senate Bill 7, passed in November 2009, mandating a statewide 20 percent reduction in per capita water use by 2020. The UWMP includes a quantification of the SFPUC's water use reduction targets and plan for meeting these objectives. The UWMP projects sufficient water supply in normal years and a supply shortfall during prolonged droughts. Plans are in place to institute varying degrees of water conservation and rationing as needed in response to severe droughts.

In addition, the SFPUC is in the process of implementing the Sewer System Improvement Program, which is a 20-year, multi-billion dollar citywide upgrade to the City's sewer and stormwater infrastructure to ensure a reliable and seismically safe system. The program includes planned improvements that will serve development in the Eastern Neighborhoods Plan area, including at the Southeast Treatment Plant, the Central Bayside System, and green infrastructure projects, such as the Mission and Valencia Green Gateway.

As the proposed project is within the scope of development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional impacts on utilities and service systems beyond those analyzed in the Eastern Neighborhoods PEIR.

<u>Topics:</u>	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
----------------	---	--	--	--

11. PUBLIC SERVICES—Would the project:

- | | | | | |
|---|--------------------------|--------------------------|--------------------------|-------------------------------------|
| a) Result in substantial adverse physical impacts associated with the provision of, or the need for, new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any public services such as fire protection, police protection, schools, parks, or other services? | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
|---|--------------------------|--------------------------|--------------------------|-------------------------------------|

The Eastern Neighborhoods PEIR determined that the anticipated increase in population would not result in a significant impact to public services, including fire protection, police protection, and public schools. No mitigation measures were identified in the PEIR.

As the proposed project is within the scope of development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional impacts on public services beyond those analyzed in the Eastern Neighborhoods PEIR.

<i>Topics:</i>	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
12. BIOLOGICAL RESOURCES—Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

As discussed in the Eastern Neighborhoods PEIR, the Eastern Neighborhoods Plan Area is in a developed urban environment that does not provide native natural habitat for any rare or endangered plant or animal species. There are no riparian corridors, estuaries, marshes, or wetlands in the Plan Area that could be affected by the development anticipated under the Eastern Neighborhoods Rezoning and Area Plans. In addition, development envisioned under the Eastern Neighborhoods Rezoning and Area Plans would not substantially interfere with the movement of any resident or migratory wildlife species. For these reasons, the PEIR concluded that implementation of the Eastern Neighborhoods Rezoning and Area Plans would not result in significant impacts on biological resources, and no mitigation measures were identified.

The project site is located within the East SoMa Plan Area of the Eastern Neighborhoods Area Plan and does not support habitat for any candidate, sensitive or special status species. Implementation of the proposed project would not result in significant impacts on biological resources beyond those identified in the Eastern Neighborhoods PEIR.

13. GEOLOGY AND SOILS—Would the project:				
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? (Refer to Division of Mines and Geology Special Publication 42.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Be located on geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code, creating substantial risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Change substantially the topography or any unique geologic or physical features of the site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Eastern Neighborhoods PEIR concluded that implementation of the Eastern Neighborhoods Rezoning and Area Plans would indirectly increase the population that would be subject to geologic hazards, including earthquakes, seismically induced ground shaking, liquefaction, and landslides. The PEIR also noted that new development is generally safer than comparable older development due to improvements in building codes and construction techniques. Compliance with applicable codes and recommendations made in project-specific geotechnical analyses would not eliminate earthquake risk,

but would reduce them to an acceptable level given the seismically active characteristics of the San Francisco Bay Area. Therefore, the PEIR concluded that implementation of the Eastern Neighborhoods Rezoning and Area Plans would not result in significant impacts related to geologic hazards. No mitigation measures were identified in the PEIR.

A geotechnical investigation was conducted to assess the geologic conditions underlying the project site and provide recommendations related to the proposed project's design and construction. The findings and recommendations, presented in a geotechnical report, are summarized below.⁶⁰

The geotechnical investigation did not include the drilling of test borings on the project site; it relied on a cone penetrometer test (CPT) conducted on the adjacent lot at 363 6th Street. The CPT probe was advanced into the soil to the point of refusal at a depth of about 126 feet below ground surface (bgs). Based on information provided by the CPT, the project site is underlain by about 24 feet of fill that consists of loose to medium-dense sand. This layer of fill is underlain by approximately 80 feet of soft Bay Mud, four feet of silt, and 16 feet of very dense sand. Groundwater is estimated to be about five feet bgs. There are no known active earthquake faults that run underneath the project site or in the project vicinity; the closest active fault to the project site is the San Andreas Fault, which is about eight miles to the southwest. The project site is in a liquefaction zone, but it is not in a landslide zone.⁶¹

For the building foundation, the geotechnical report recommends the use of a deep foundation system (piles) or an alternative foundation system determined to be appropriate by a geotechnical consultant. The project sponsor has indicated that the proposed building would be supported by deep piers with a mat slab. Construction of the proposed project would require excavation to a depth of two feet bgs and the removal of about 520 cubic yards of soil from the project site.

The CPT did not reach a sufficient depth to determine if the underlying soil will provide enough support for the recommended deep foundation system. The geotechnical report states that deep rotary wash borings will be the most appropriate method for obtaining the geotechnical information needed to perform a geotechnical engineering analysis for the proposed project. The geotechnical report recommends that four rotary wash borings be drilled to bedrock and that three CPTs be conducted to assist in interpolating the soil conditions in between the borings.⁶² The project sponsor has agreed to implement the recommendations in the geotechnical report.

The proposed project is required to comply with the San Francisco Building Code (Building Code), which ensures the safety of all new construction in San Francisco. The Department of Building Inspection (DBI) will review the project-specific geotechnical report during its review of the building permit application for the proposed project. In addition, the DBI may require additional site-specific soils report(s) as needed. Implementation of the recommendations in the geotechnical report, in combination with the requirement for a geotechnical report and the review of the building permit application pursuant to the DBI's implementation of the Building Code would minimize the risk of loss, injury, or death due to seismic or other geologic hazards.

⁶⁰ Alan Kropp & Associates, Inc., *Due Diligence Geotechnical Study, Nine-Story Mixed-Use Buildings, 345 and 363 6th Street, San Francisco, California* (hereinafter "*Geotechnical Study*"), December 4, 2013.

⁶¹ San Francisco Planning Department, GIS database geology layer, accessed September 1, 2016.

⁶² *Geotechnical Study*, p. 13.

For these reasons, the proposed project would not result in significant impacts related to geology and soils beyond those identified in the Eastern Neighborhoods PEIR, and no mitigation measures are necessary.

<i>Topics:</i>	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
14. HYDROLOGY AND WATER QUALITY—Would the project:				
a) Violate any water quality standards or waste discharge requirements?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner that would result in substantial erosion or siltation on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Otherwise substantially degrade water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other authoritative flood hazard delineation map?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h) Place within a 100-year flood hazard area structures that would impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
j) Expose people or structures to a significant risk of loss, injury or death involving inundation by seiche, tsunami, or mudflow?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Eastern Neighborhoods PEIR determined that the anticipated increase in population would not result in a significant impact on hydrology and water quality, including the combined sewer system and the potential for combined sewer outflows. No mitigation measures were identified in the PEIR.

The project site is completely paved, so implementation of the proposed project would not increase the area of impervious surfaces. As a result, the proposed project would not increase stormwater runoff.

For these reasons, the proposed project would not result in any significant impacts related to hydrology and water quality beyond those identified in the Eastern Neighborhoods PEIR.

<u>Topics:</u>	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
15. HAZARDS AND HAZARDOUS MATERIALS—Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h) Expose people or structures to a significant risk of loss, injury, or death involving fires?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Eastern Neighborhoods PEIR noted that implementation of any of the Eastern Neighborhoods rezoning options would encourage construction of new development within the Plan Area. The PEIR found that there is a high potential to encounter hazardous materials during construction activities in many parts of the Plan Area because of the presence of 1906 earthquake fill, previous and current land uses associated with the use of hazardous materials, and known or suspected hazardous materials cleanup cases. However, the PEIR found that existing regulations for facility closure, underground storage tank closure, and investigation and cleanup of soil and groundwater would ensure that workers and the community would be protected from exposure to hazardous materials during construction. In

addition, businesses that use or generate hazardous substances (cleaners, solvents, etc.), would be subject to existing regulations that would protect workers and the community from exposure to hazardous materials during operations. Furthermore, compliance with existing building and fire codes would reduce impacts related to potential fire hazards, emergency response, and evacuation hazards to less-than-significant levels.

Hazardous Building Materials

The Eastern Neighborhoods PEIR determined that future development in the Plan Area may involve demolition or renovation of existing structures containing hazardous building materials. Some materials commonly used in older buildings could present a public health risk if disturbed during an accident or during demolition or renovation of an existing building. Hazardous building materials addressed in the PEIR include asbestos, electrical equipment such as transformers and fluorescent light ballasts that contain PCBs or di (2 ethylhexyl) phthalate (DEHP), fluorescent lights containing mercury vapors, and lead-based paints. Asbestos and lead-based paint may also present a health risk to existing building occupants if they are in a deteriorated condition. If removed during demolition of a building, these materials would also require special disposal procedures. The Eastern Neighborhoods PEIR identified a significant impact associated with hazardous building materials, including PCBs, DEHP, and mercury, and determined that PEIR Mitigation Measure L-1: Hazardous Building Materials, would reduce this impact to a less-than-significant level. PEIR Mitigation Measure L-1 requires any equipment containing PCBs or DEHP to be removed and properly disposed of in accordance with applicable federal, state, and local regulations prior to the start of renovation. In addition, mercury or other hazardous materials that are identified before or during construction shall be removed and/or abated in accordance with applicable federal, state, and local regulations. Because the proposed project includes the demolition of an existing building, PEIR Mitigation Measure L-1 is applicable to the proposed project. PEIR Mitigation Measure L-1 is identified as Project Mitigation Measure 5 and discussed on p. 57.

Soil and Groundwater Contamination

The project site is located in a Maher Area, meaning that it is known or suspected to contain contaminated soil and/or groundwater.⁶³ In addition, the proposed project would require excavation to a depth of two feet below ground surface and the disturbance of more than 50 cubic yards of soil. For these reasons, the proposed project is subject to Health Code Article 22A (also known as the Maher Ordinance), which is administered and overseen by the Department of Public Health (DPH). The project sponsor is required to retain the services of a qualified professional to prepare a Phase I Environmental Site Assessment (ESA) that meets the requirements of Health Code Section 22.A.6.

The Phase I ESA would determine the potential for site contamination and level of exposure risk associated with the proposed project. Based on that information, the project sponsor may be required to conduct soil and/or groundwater sampling and analysis. Where such analysis reveals the presence of hazardous substances in excess of state or federal standards, the project sponsor is required to submit a site mitigation plan (SMP) to the DPH or other appropriate state or federal agencies and to remediate any site contamination in accordance with an approved SMP prior to the issuance of any building permit.

⁶³ San Francisco Planning Department, *Expanded Maher Area Map*, March 2015. Available online at http://www.sf-planning.org/ftp/files/publications_reports/library_of_cartography/Maher%20Map.pdf, accessed September 1, 2016.

Accordingly, a Phase I ESA has been prepared to assess the potential for site contamination.⁶⁴ The project site is not included on any list compiled pursuant to California Government Code Section 65962.5.⁶⁵ There was no evidence of any inappropriate use, storage, or disposal of hazardous materials, no evidence of spills, leaks, or accumulation of liquids on the project site, and no evidence of any underground storage tanks or other storage containers.⁶⁶ The Phase I ESA did not identify any Recognized Environmental Conditions on the project site and concluded that no further investigation is required.⁶⁷

In compliance with the Maher Ordinance, the project sponsor has submitted a Maher Ordinance Application to the DPH.⁶⁸ Pursuant to compliance with the Maher Ordinance, the proposed project would not result in significant impacts related to contaminated soil and/or groundwater beyond those identified in the Eastern Neighborhoods PEIR.

As discussed above, implementation of Project Mitigation Measure 5 and compliance with all applicable federal, state, and local regulations would ensure that the proposed project would not result in significant impacts related to hazards or hazardous materials beyond those identified in the Eastern Neighborhoods PEIR.

<u>Topics:</u>	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
16. MINERAL AND ENERGY RESOURCES—Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Eastern Neighborhoods PEIR determined that the Eastern Neighborhoods Rezoning and Area Plans would facilitate the construction of both new residential units and commercial buildings. Development of these uses would not result in use of large amounts of fuel, water, or energy in a wasteful manner or in the context of energy use throughout the City and region. The energy demand for individual buildings would be typical for such projects and would meet, or exceed, current state and local codes and standards concerning energy consumption, including Title 24 of the California Code of Regulations enforced by the Department of Building Inspection. The Plan Area does not include any natural resources routinely extracted and the rezoning does not result in any natural resource extraction programs. Therefore, the Eastern Neighborhoods PEIR concluded that implementation of the Eastern Neighborhoods Rezoning

⁶⁴ AEI Consultants, *Phase I Environmental Site Assessment, 345 6th Street, San Francisco, California, 94103* (hereinafter “Phase I ESA”), January 28, 2014.

⁶⁵ *Phase I ESA*, pp. 11-17.

⁶⁶ *Phase I ESA*, p. 20.

⁶⁷ *Phase I ESA*, pp. iii-v.

⁶⁸ *Maher Ordinance Application, 345 6th Street*, submitted February 24, 2014.

and Area Plans would not result in a significant impact on mineral and energy resources. No mitigation measures were identified in the PEIR.

As the proposed project is within the scope of development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional impacts on mineral and energy resources beyond those analyzed in the Eastern Neighborhoods PEIR.

<u>Topics:</u>	<i>Significant Impact Peculiar to Project or Project Site</i>	<i>Significant Impact not Identified in PEIR</i>	<i>Significant Impact due to Substantial New Information</i>	<i>No Significant Impact not Previously Identified in PEIR</i>
17. AGRICULTURE AND FOREST RESOURCES:—Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)) or timberland (as defined by Public Resources Code Section 4526)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The Eastern Neighborhoods PEIR determined that no agricultural resources exist in the Plan Area; therefore the rezoning and community plans would have no effect on agricultural resources. No mitigation measures were identified in the PEIR. The Eastern Neighborhoods PEIR did not analyze the effects on forest resources.

As the proposed project is within the scope of development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional impacts on agriculture and forest resources beyond those analyzed in the Eastern Neighborhoods PEIR.

MITIGATION MEASURES

Project Mitigation Measure 1: Accidental Discovery (Implementing PEIR Mitigation Measure J-2)

The following mitigation measure is required to avoid any potential adverse effect from the proposed project on accidentally discovered buried or submerged historical resources as defined in *CEQA Guidelines* Section 15064.5(a) and (c). The project sponsor shall distribute the Planning Department archeological resource "ALERT" sheet to the project prime contractor; to any project subcontractor (including demolition, excavation, grading, foundation, pile driving, etc. firms); or utilities firm involved in soils-disturbing activities within the project site. Prior to any soils-disturbing activities being undertaken, each contractor is responsible for ensuring that the "ALERT" sheet is circulated to all field personnel, including machine operators, field crew, pile drivers, supervisory personnel, etc. The project sponsor shall provide the Environmental Review Officer (ERO) with a signed affidavit from the responsible parties (prime contractor, subcontractor(s), and utilities firm) to the ERO confirming that all field personnel have received copies of the Alert Sheet.

Should any indication of an archeological resource be encountered during any soils-disturbing activity of the project, the project Head Foreman and/or project sponsor shall immediately notify the ERO and shall immediately suspend any soils-disturbing activities in the vicinity of the discovery until the ERO has determined what additional measures should be undertaken.

If the ERO determines that an archeological resource may be present within the project site, the project sponsor shall retain the services of an archeological consultant from the pool of qualified archeological consultants maintained by the Planning Department archeologist. The archeological consultant shall advise the ERO as to whether the discovery is an archeological resource retains sufficient integrity and is of potential scientific/historical/cultural significance. If an archeological resource is present, the archeological consultant shall identify and evaluate the archeological resource. The archeological consultant shall make a recommendation as to what action, if any, is warranted. Based on this information, the ERO may require, if warranted, specific additional measures to be implemented by the project sponsor.

Measures might include: preservation in situ of the archeological resource; an archeological monitoring program; or an archeological testing program. If an archeological monitoring program or archeological testing program is required, it shall be consistent with the Environmental Planning Division guidelines for such programs. The ERO may also require that the project sponsor immediately implement a site security program if the archeological resource is at risk from vandalism, looting, or other damaging actions.

The project archeological consultant shall submit a Final Archeological Resources Report (FARR) to the ERO that evaluates the historical significance of any discovered archeological resource and describing the archeological and historical research methods employed in the archeological monitoring/data recovery program(s) undertaken. Information that may put at risk any archeological resource shall be provided in a separate removable insert within the final report.

Copies of the Draft FARR shall be sent to the ERO for review and approval. Once approved by the ERO, copies of the FARR shall be distributed as follows: California Archaeological Site Survey Northwest Information Center (NWIC) shall receive one (1) copy, and the ERO shall receive a copy of the transmittal of the FARR to the NWIC. The Environmental Planning Division of the Planning Department shall

receive one bound copy, one unbound copy and one unlocked, searchable PDF copy on CD of the FARR along with copies of any formal site recordation forms (CA DPR 523 series) and/or documentation for nomination to the National Register of Historic Places/California Register of Historical Resources. In instances of high public interest or interpretive value, the ERO may require a different final report content, format, and distribution than that presented above.

Project Mitigation Measure 2: Construction Noise – Pile Driving (Implementing PEIR Mitigation Measure F-1)

The project sponsor shall ensure that piles are pre-drilled wherever feasible to reduce construction-related noise and vibration. No impact pile drivers shall be used unless absolutely necessary. Contractors shall be required to use pile driving equipment with state-of-the-art noise-shielding and muffling devices. To reduce noise and vibration impacts, sonic or vibratory sheet pile drivers rather than impact drivers shall be used wherever sheet piles are needed. The project sponsor shall require that contractors schedule pile driving activities for times of day that would minimize disturbance to neighbors.

Project Mitigation Measure 3: Construction Noise (Implementing PEIR Mitigation Measure F-2)

The project sponsor shall develop a set of site-specific noise attenuation measures under the supervision of a qualified acoustical consultant. Prior to commencing construction, a plan for such measures shall be submitted to the Department of Building Inspection (DBI) to ensure that maximum feasible noise attenuation will be achieved. These attenuation measures shall include as many of the following control strategies as feasible:

- Erect temporary plywood noise barriers around a construction site, particularly where a site adjoins noise-sensitive uses;
- Utilize noise control blankets on a building structure as the building is erected to reduce noise emission from the site;
- Evaluate the feasibility of noise control at the receivers by temporarily improving the noise reduction capability of adjacent buildings housing sensitive uses;
- Monitor the effectiveness of noise attenuation measures by taking noise measurements; and
- Post signs on-site pertaining to permitted construction days and hours and complaint procedures and who to notify in the event of a problem, with telephone numbers listed.

Project Mitigation Measure 4 – Construction Air Quality (Implementing PEIR Mitigation Measure G-1)

The project sponsor or the project sponsor's Contractor shall comply with the following:

A. *Engine Requirements.*

1. All off-road equipment greater than 25 hp and operating for more than 20 total hours over the entire duration of construction activities shall have engines that meet or exceed either U.S. Environmental Protection Agency (USEPA) or California Air Resources Board (ARB) Tier 2 off-road emission standards, and have been retrofitted with an ARB Level 3 Verified Diesel Emissions Control Strategy. Equipment with engines meeting Tier 4 Interim

or Tier 4 Final off-road emission standards automatically meet this requirement.

2. Where access to alternative sources of power are available, portable diesel engines shall be prohibited.
3. Diesel engines, whether for off-road or on-road equipment, shall not be left idling for more than two minutes, at any location, except as provided in exceptions to the applicable state regulations regarding idling for off-road and on-road equipment (e.g., traffic conditions, safe operating conditions). The Contractor shall post legible and visible signs in English, Spanish, and Chinese, in designated queuing areas and at the construction site to remind operators of the two-minute idling limit.
4. The Contractor shall instruct construction workers and equipment operators on the maintenance and tuning of construction equipment, and require that such workers and operators properly maintain and tune equipment in accordance with manufacturer specifications.

B. *Waivers.*

1. The Planning Department's Environmental Review Officer (ERO) or designee may waive the alternative source of power requirement of Subsection (A)(2) if an alternative source of power is limited or infeasible at the project site. If the ERO grants the waiver, the Contractor must submit documentation that the equipment used for on-site power generation meets the requirements of Subsection (A)(1).
2. The ERO may waive the equipment requirements of Subsection (A)(1) if: a particular piece of off-road equipment with an ARB Level 3 VDECS is technically not feasible; the equipment would not produce desired emissions reduction due to expected operating modes; installation of the equipment would create a safety hazard or impaired visibility for the operator; or, there is a compelling emergency need to use off-road equipment that is not retrofitted with an ARB Level 3 VDECS. If the ERO grants the waiver, the Contractor must use the next cleanest piece of off-road equipment, according to the table below.

Table – Off-Road Equipment Compliance Step-down Schedule

Compliance Alternative	Engine Emission Standard	Emissions Control
1	Tier 2	ARB Level 2 VDECS
2	Tier 2	ARB Level 1 VDECS
3	Tier 2	Alternative Fuel*

How to use the table: If the ERO determines that the equipment requirements cannot be met, then the project sponsor would need to meet Compliance Alternative 1. If the ERO determines that the Contractor cannot supply off-road equipment meeting Compliance Alternative 1, then the Contractor must meet Compliance

Alternative 2. If the ERO determines that the Contractor cannot supply off-road equipment meeting Compliance Alternative 2, then the Contractor must meet Compliance Alternative 3. Alternative fuels are not a VDECS.

- C. *Construction Emissions Minimization Plan.* Before starting on-site construction activities, the Contractor shall submit a Construction Emissions Minimization Plan (Plan) to the ERO for review and approval. The Plan shall state, in reasonable detail, how the Contractor will meet the requirements of Section A.
1. The Plan shall include estimates of the construction timeline by phase, with a description of each piece of off-road equipment required for every construction phase. The description may include, but is not limited to: equipment type, equipment manufacturer, equipment identification number, engine model year, engine certification (Tier rating), horsepower, engine serial number, and expected fuel usage and hours of operation. For VDECS installed, the description may include: technology type, serial number, make, model, manufacturer, ARB verification number level, and installation date and hour meter reading on installation date. For off-road equipment using alternative fuels, the description shall also specify the type of alternative fuel being used.
 2. The ERO shall ensure that all applicable requirements of the Plan have been incorporated into the contract specifications. The Plan shall include a certification statement that the Contractor agrees to comply fully with the Plan.
 3. The Contractor shall make the Plan available to the public for review on-site during working hours. The Contractor shall post at the construction site a legible and visible sign summarizing the Plan. The sign shall also state that the public may ask to inspect the Plan for the project at any time during working hours and shall explain how to request to inspect the Plan. The Contractor shall post at least one copy of the sign in a visible location on each side of the construction site facing a public right-of-way.
- D. *Monitoring.* After start of construction activities, the Contractor shall submit quarterly reports to the ERO documenting compliance with the Plan. After completion of construction activities and prior to receiving a final certificate of occupancy, the project sponsor shall submit to the ERO a final report summarizing construction activities, including the start and end dates and duration of each construction phase, and the specific information required in the Plan.

Project Mitigation Measure 5: Hazardous Building Materials (Implementing PEIR Mitigation Measure L-1)

The project sponsor shall ensure that any equipment containing PCBs or DEPH, such as fluorescent light ballasts, are removed and properly disposed of according to applicable federal, state, and local laws prior to the start of renovation, and that any fluorescent light tubes, which could contain mercury, are similarly removed and properly disposed of. Any other hazardous materials identified, either before or during work, shall be abated according to applicable federal, state, and local laws.
