MEMORANDUM

To: Erin Efner and Jessica Range
From: Heather Dubois, Atkins
Subject: Potrero Hope SF Alternatives Analysis
Date: March 5, 2014

This memorandum presents the analysis for the project alternatives with respect to the Potrero Hope SF Project. The analysis for the Proposed Project is included in the Atkins Air Quality Technical Report (AQTR). The memorandum presents a brief introduction of the alternatives, assumptions and methodology, and results by alternative. In addition, the memorandum includes CO emissions summaries for the Proposed Project along with Alternative 1 and Alternative 2.

The Proposed Project assumes the demolition of all existing land uses and the development of up to 1,700 residential units and 50,000 square feet (sf) of nonresidential land uses. Each of the alternatives presents a reduced development scenario. Alternative 1 would result in the development of 1,280 residential units and 39,000 sf of nonresidential land use. Alternative 2 would develop 620 residential units and 3,500 sf of nonresidential land uses, a level that only serves to replace the existing on-site land uses. Under all three scenarios the same amount of demolition would occur and the same acreage would be developed. Table 1, Land Use Comparison, details the land uses to be demolished and developed under each of the alternatives.

| Table 1 Land Use Comparison | | | | |
|------------------------------------|-------------------|-------------------------|----------------------|----------------------|
| | Demolition | Proposed Project | Alternative 1 | Alternative 2 |
| 1 Bedroom (du) | 59 | 516 | 346 | 53 |
| 2+ Bedroom (du) | 550 | 1144 | 854 | 567 |
| Senior (du) | 0 | 100 | 80 | 0 |
| Retail (ksf) | 0 | 15 | 15 | 0 |
| Community Center (ksf) | 0 | 24 | 13 | 0 |
| Daycare (ksf) | 1.3 | 7.5 | 7.5 | 1.3 |
| Preschool (ksf) | 2.2 | 3.5 | 3.5 | 2.2 |
| Total Acreage | 39.19 | | | |

Assumptions and Methodology

■ Criteria Air Pollutants (Construction)

The analysis for Alternatives 1 and 2 followed the same methodology as the analysis for the Proposed Project as detailed in the AQTR. The analysis used CalEEMod to determine emissions from the haul trips, vendor trips, and worker trips for the construction activities. The on-site construction emission were estimated using emission factors from the 2011 OFFROAD program based on anticipated project years.

While the exact timing of the construction activities is unknown, there are three scenarios that represent the most likely order of construction. Scenario A would construct Phase 1 followed by Phase 2 followed by Phase 3. Scenario B would construct Phase 3 followed by Phase 1 followed by Phase 2, and Scenario C would construct Phase 3 followed by Phase 2 followed by Phase 1.

The timing of the Alternatives was scaled from the Proposed Project based on the reduced level of development. However, because the same amount of demolition and grading will occur under each Alternative as with the Proposed Project, the length and magnitude of these sub-phases do not change from that identified in the AQTR. The schedule shown in Table 2, Construction Schedule, was used for modeling purposes. Due to the size of the phasing areas, it is assumed some construction sub-phases may overlap within the individual development phases. Therefore the months depicted for each construction segment length in Table 2 will not add to the total phase lengths shown. Modeling assumptions for construction, including equipment lists by phase, are detailed in Attachment A (Alternative 1) and Attachment C (Alternative 2). CalEEMod output for off-site construction equipment is included in Attachment B (Alternative 1) and Attachment D (Alternative 2).

| Table 2 Construction Schedule | | | | | | |
|--------------------------------------|------------------|----------|------------------|-----------|------------------|-----------|
| | <i>Phase 1</i> | | <i>Phase 2</i> | | <i>Phase 3</i> | |
| ALTERNATIVE 1 | | | | | | |
| Demolition | 107 days | 5 Months | 175 days | 9 Months | 175 days | 9 Months |
| Grading | 154 days | 8 Months | 368 days | 18 Months | 368 days | 18 Months |
| Building | 188 days | 9 Months | 335 days | 17 Months | 330 days | 17 Months |
| Coating | 125 days | 6 Months | 285 days | 14 Months | 281 days | 14 Months |
| Total length | 22 months | | 42 months | | 43 months | |
| ALTERNATIVE 2 | | | | | | |
| Demolition | 107 days | 5 Months | 175 days | 9 Months | 175 days | 9 Months |
| Grading | 154 days | 8 Months | 368 days | 18 Months | 368 days | 18 Months |
| Building | 97 days | 5 Months | 151 days | 8 Months | 170 days | 9 Months |
| Coating | 64 days | 3 Months | 129 days | 6 Months | 144 days | 7 Months |
| Total length | 20 months | | 34 months | | 35 months | |
| SOURCE: Atkins 2014. | | | | | | |

Emissions were determined based on the number of residential units, square footage of nonresidential buildings, acreage of the construction phase, and assuming a 5-acre maximum daily disturbance throughout grading activities. It was anticipated that construction would be conducted 5 days per week or 280 days per year. Annual emissions for each year of each phase were averaged over the duration of the construction to determine average annual emissions. Average daily emissions were determined by summing the total emissions over the construction phase and dividing by the total number of days of construction for that phase.

■ Criteria Air Pollutants (Operational)

Alternative 2 assumes the replacement of only the existing land uses, therefore the criteria pollutant emissions are anticipated to be substantially similar to existing conditions and were not specifically modeled. However an interim year analysis was conducted to evaluate the emissions overlap between existing on-site emissions and the construction of Alternative 2.

Criteria pollutant emissions associated with the operation of Alternative 1 were estimated separately by phase using CalEEMod following the methodology used in the AQTR for the Proposed Project. Mobile emissions associated with vehicle operations used trip rates and vehicle trips identified in the project-specific transportation study.¹ Modeling assumptions for construction, including equipment lists by phase, are detailed in Attachment E. CalEEMod output for operational activities is included in Attachment F.

Criteria pollutant emissions from a proposed generator was calculated separately based on generator specific emissions as outlined in Attachment E. As discussed in the AQTR, Environmental Protection Agency (EPA) Tier 2 rated emission factors were used for the analysis. The operational hours assumed were the maximum allowed for a standby generator under BAAQMD permitting regulations (50 hours per year).

Because 85 percent of the existing buildings are currently occupied, the net Alternative 1 operational emissions are a result of the anticipated emissions for Alternative 1 minus the existing emissions from current on-site activities.

Because each phase will become operational after construction is finished, emissions from subsequent construction activities are included as part of the interim year operational emissions for Alternative 1. Interim years are the years between the completion of the first phase of construction and the completion of the last phase, so depending on the construction scenario, between either 2017 and 2023 or 2019 and 2023. Because it is unknown which construction Scenario will be used, the Interim Year emissions reflect the maximum potential emissions.

■ Health Risk

For construction activities Cancer Risk and PM_{2.5} concentrations were determined for both Alternative 1 and Alternative 2 by scaling the impacts of the Proposed Project relative to the criteria pollutant emissions stated in the AQTR.

¹ CDM Smith, *Potrero HOPE Transportation Study* (July 11, 2012).

Alternative 2 assumes the replacement of only the existing land uses, therefore the operational related health risks are anticipated to be substantially similar to existing conditions and were not modeled.

Health Risk and PM_{2.5} Concentrations for the operation of Alternative 1 was determined by scaling the impacts reported in the AQTR based on the change in vehicle trips. For the Proposed Project the increase in average daily vehicle trips along analyzed roadways was 4,360. The increase in average daily vehicle trips under Alternative 1 is 2,780 for a decrease in 1,580 daily trips (63.69 percent) from the level analyzed in the AQTR for the Proposed Project. Health risk and PM_{2.5} proportioning details are included in Attachment G.

Alternative 1

Alternative 1 construction activities by phase are identified in Table 3, Land Use Comparison Alternative 1.

| | Phase 1 | | Phase 2 | | Phase 3 | |
|------------------------|-----------------------------|---------------|-----------------------------|---------------|-----------------------------|---------------|
| | Existing (to be demolished) | Alternative 1 | Existing (to be demolished) | Alternative 1 | Existing (to be demolished) | Alternative 1 |
| 1 Bedroom (du) | 7 | 57 | 37 | 150 | 15 | 21 |
| 2+ Bedroom (du) | 71 | 138 | 343 | 374 | 136 | 227 |
| Senior (du) | 0 | 0 | 0 | 80 | 0 | 0 |
| Retail (ksf) | 0 | 3.75 | 0 | 6.25 | 0 | 5 |
| Community Center (ksf) | 0 | 0 | 0 | 13 | 0 | 0 |
| Daycare (ksf) | 0 | 0 | 0 | 7.5 | 1.3 | 0 |
| Preschool (ksf) | 0 | 0 | 0 | 3.5 | 2.2 | 0 |
| Total Acreage | 7.4 | | 19.45 | | 12.34 | |

SOURCE: CDM Smith, Potrero HOPE Transportation Study (July 11, 2012).

■ Criteria Air Pollutants

Construction under Alternative 1 would implement the same reduction measures as identified in the AQTR. Table 4, Unreduced Alternative 1 Construction Emissions, p. 5, and Table 5, Reduced Alternative 1 Construction Emissions, p. 6, summarize the unreduced and reduced construction criteria pollutants for Alternative 1.

| Table 4 Unreduced Alternative 1 Construction Emissions | | | | |

SOURCE: Atkins, modeling output (2014).

- a. PM₁₀ and PM_{2.5} emissions include the reductions from RM-3 Outlined under Section 3.5 of the AQTR
- b. Combined Daily is the average daily emissions over the entire 9-year construction period.
- c. Combined Annual is the average annual emissions over the entire 9-year construction period.

Operational emissions under Alternative 1 would implement the same reduction measures as identified in the AQTR. Table 6, Unreduced Alternative 1 – Criteria Air Pollutant Emissions, p. 7, and Table 7, Reduced Alternative 1 – Criteria Air Pollutant Emissions, p. 8, summarize the unreduced and reduced operational criteria pollutants for Alternative 1. Note that since the construction of Alternative 1 is of shorter duration than that of the Proposed Project construction phases overlap differently than those identified for the proposed project in the AQTR. Therefore some interim year emissions may be higher than what is anticipated for the Proposed Project even though the number of residential units and size of nonresidential land uses developed are less than in the Proposed Project.

SOURCE: Atkins (2014); CalEEMod Modeling Output (2013).

- a. Net operational build-out is the sum of the operational emissions from all Project Phases and the generator minus the emissions from existing land uses. It represents the anticipated daily or annual emissions after the completion of all construction activities.
- b. Under the worst-case development scenario, during year 2015, only emissions from construction of the first phase (whether it be Phase 1 or 3) would occur. Note: Under none of the construction scenarios would Phase 2 be developed first.
- c. Under the worst-case development scenario, during years 2016 and 2017, only emissions from construction of the first phase would occur if Phase 3 is developed first. If Phase 1 is developed first emissions from these years include the construction activities from subsequent construction phases and the operational activities from the operation of Phase 1.
- d. Emissions for Interim Years 2018 through 2023 include emissions from construction activities from subsequent phases and operational activities from operations of previous development phases. For each year, the greatest amount of emissions is reported, regardless of the development scenario. This represents a conservative analysis as depending on the Development Scenario implemented some interim year emissions will be less than reported here.

- d. Emissions for Interim Years 2018 through 2023 include emissions from construction activities from subsequent phases and operational activities from operations of previous development phases. For each year, the greatest amount of emissions is reported, regardless of the development scenario. This represents a conservative analysis as depending on the Development Scenario implemented some interim year emissions will be less than reported here.

■ Health Risk

Construction under Alternative 1 would implement the same reduction measures as identified in the AQTR. Table 8, Alternative 1 – Unreduced Project-Related Risk, p. 10, and Table 9, Alternative 1 – Reduced Project-Related Risk, p. 11, summarize the unreduced and reduced Project-Related Risk for Alternative 1. Table 10, Unreduced Project-Related PM_{2.5} Concentrations, p. 12, and Table 11, Reduced Project-Related PM_{2.5} Concentrations, p. 13, summarize the unreduced and reduced Project-related PM_{2.5} concentrations analyzed for Alternative 1. Table 12, Alternative 1 – Unreduced Cumulative Risk, p. 14, and Table 13, Alternative 1 – Reduced Cumulative Risk, p. 15, summarize the unreduced and reduced cumulative risks for Alternative 1. Table 14, Alternative 1 – Unreduced Cumulative PM_{2.5} Concentrations, p. 16, and Table 15, Alternative 1 – Reduced Cumulative PM_{2.5} Concentrations, p. 17, summarize the unreduced and the reduced cumulative PM_{2.5} emissions for Alternative 1. Table 16, Alternative 1 – Reduced Cumulative PM_{2.5} Concentrations at buildout..

SOURCE: Atkins (2014); CalEEMod Modeling Output (2013).

- a. Net operational build-out is the sum of the operational emissions from all Project Phases and the generator minus the emissions from existing land uses. It represents the anticipated daily or annual emissions after the completion of all construction activities.
- b. Under the worst-case development scenario, during year 2015, only emissions from construction of the first phase (whether it be Phase 1, or 3) would occur. Note: Under none of the construction scenarios would Phase 2 be developed first.
- c. Under the worst-case development scenario, during years 2016 and 2018, only emissions from construction of the first phase would occur if Phase 3 is developed first. If Phase 1 is developed first emissions from these years include the construction activities from subsequent construction phases and the operational activities from the operation of Phase 1.
- d. Emissions for Interim Years 2019 through 2022 include emissions from construction activities from subsequent phases and operational activities from operations of previous development phases. For each year, the greatest amount of emissions is reported, regardless of the development scenario. This represents a conservative analysis as depending on the Development Scenario implemented some interim year emissions will be less than reported here.

SOURCE: Atkins, CalEEMod Modeling Output (2013).

- a. Net operational build-out is the sum of the operational emissions from all Project Phases and the generator minus the emissions from existing land uses. It represents the anticipated daily or annual emissions after the completion of all construction activities.
- b. Emissions for Interim Year scenarios vary based on the phase being constructed, the construction activities during that year, the pollutant sources, and the completed phases that are in operation. There is no one Development Scenario that results in the "worst-case" emissions for each criteria pollutant and each year. Therefore, for each year the highest pollutant source is reported regardless of the development scenario that it originates from. This represents a conservative analysis as depending on the Development Scenario implemented some interim year emissions will be less than reported here.

*Because there is no "Senior housing" land use, the "Apartment mid rise" land use was used in the modeling. Because there is no "community center" land use in CalEEMod, the model used the "Library" landuse to approximate emissions from a community center. Further, as there is no "pre-school" land use, the modeling used "day care" to approximate emissions from a preschool.

While only 85% occupancy for the whole project, Phase 2 and Phase 3 existing are assumed fully occupied to account for moving occupants of Phase 1 to Phases 2 and 3 while Phase 1 is being rebuilt.

*BAAQMD sets limits to the VOC content for architectural coatings. CalEEMod defaults have been adjusted to meet these requirements. The BAAQMD requirements can be found at: http://www.baaqmd.gov/~media/Files/Rg8-3_advisory_2_15-2011-FINAL.ashx

Construction Reduction Measures

Reduction Requirements:

- RM-1: At the beginning of construction activities, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 3 off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 39 percent.
- RM-2: For all construction occurring after 2016, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 4 interim off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 21 percent from Tier 3 engines.

¹ Combined Daily is the average daily emissions over the entire 9 year construction period.

² Combined Annual is the average annual emissions over the entire 9 year construction period.

Potrero HOPE

Construction Reduction Measures

Reduction Requirements:

- RM-1: At the beginning of construction activities, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 3 off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 39 percent.
- RM-2: For all construction occurring after 2016, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 4 interim off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 21 percent from Tier 3 engines.

Construction Reduction Measures

Reduction Requirements:

- RM-1: At the beginning of construction activities, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 3 off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 39 percent.
- RM-2: For all construction occurring after 2016, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 4 interim off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 21 percent from Tier 3 engines.

1.2 Other Project Characteristics

| | | | | | |
|--------------------------------|--------------------------------|--------------------------------|-------|----------------------------------|-------|
| Urbanization | Urban | Wind Speed (m/s) | 4.6 | Precipitation Freq (Days) | 64 |
| Climate Zone | 5 | | | Operational Year | 2020 |
| Utility Company | Pacific Gas & Electric Company | | | | |
| CO2 Intensity (lb/MWhr) | 641.35 | CH4 Intensity (lb/MWhr) | 0.029 | N2O Intensity (lb/MWhr) | 0.006 |

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction only for offsite emissions - onsite construction emissions calculated separately

Land Use - Based on project phasing

Construction Phase - Earliest Phase 2 construction for Alt 1. Demo and Grading will be same for offsite emissions as Proposed Project

Off-road Equipment - no onsite emissions

Off-road Equipment - no onsite emissions. Equipment from project description

Off-road Equipment - no onsite emissions

Vehicle Trips - No operational

Woodstoves - no op

Area Coating - no operational

Energy Use - no operational

Landscape Equipment - no op

Water And Wastewater - no operational

Solid Waste - no op

Construction Off-road Equipment Mitigation -

4.0 Operational Detail - Mobile

Alternative 1 - Phase 3 Construction - Offsite Emissions Only
San Francisco County, Annual

1.0 Project Characteristics

1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---------------------|--------|---------------|-------------|--------------------|------------|
| Apartments Low Rise | 139.00 | Dwelling Unit | 3.38 | 139,000.00 | 317 |
| Condo/Townhouse | 342.00 | Dwelling Unit | 8.48 | 342,000.00 | 780 |
| Strip Mall | 5.00 | 1000sqft | 0.03 | 5,000.00 | 0 |

1.2 Other Project Characteristics

| | | | | | |
|--------------------------------|--------------------------------|--------------------------------|-------|----------------------------------|-------|
| Urbanization | Urban | Wind Speed (m/s) | 4.6 | Precipitation Freq (Days) | 64 |
| Climate Zone | 5 | | | Operational Year | 2018 |
| Utility Company | Pacific Gas & Electric Company | | | | |
| CO2 Intensity (lb/MWhr) | 641.35 | CH4 Intensity (lb/MWhr) | 0.029 | N2O Intensity (lb/MWhr) | 0.006 |

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction only for offsite emissions - onsite construction emissions calculated separately

Land Use - Based on project phasing

Construction Phase - Earliest Phase H construction for Alt 1. Demo and Grading will be same for offsite emissions as Proposed Project

Off-road Equipment - no onsite emissions

Off-road Equipment - no onsite emissions. Equipment from project description

Off-road Equipment - no onsite emissions

Vehicle Trips - No operational

Woodstoves - no op

Area Coating - no operational

Energy Use - no operational

Landscape Equipment - no op

Water And Wastewater - no operational

Solid Waste - no op

Construction Off-road Equipment Mitigation -

4.0 Operational Detail - Mobile

ATTACHMENT C

Alternative 2 Construction Assumptions and Summary Calculations

Potrero HOPE Project Assumptions - Alternative 2

CalEEMod Inputs (Non-Default input only)

Project Location: County San Francisco
 Climate Zone: 5
 Landuse Setting: Urban
 Operational Year: 2017, 2021, 2025
 Utility: PG&E

Land Use Information

| | | | # Dus ^{1,2} | # bedrooms | ksf ¹ | Trip rate ² | Trips | Population ¹ |
|-------------------------|--------------|-------------------|----------------------|------------|------------------|------------------------|---------|-------------------------|
| Proposed Project | | | | | | | | |
| Phase 1: | Apartment | Low Rise | 9 | 1 | | 3.740 | 33.66 | 21 |
| | Townhome | Low Rise | 92 | 2+ | | 4.986 | 458.71 | 210 |

| | Recreational | Community Center* | | | 0 | | | |
| | | Daycare | | | 1.3 | | | |
| | Preschool* | | | 2.2 | | | | |
| Total | | | 620 | | 3.5 | | | 1414 |

*Because there is no "Senior housing" land use, the "Apartment mid rise" land use was used in the modeling. Because there is no "community center" land use in CalEEMod, the model used the "Library" landuse to approximate emissions from a community center. Further, as there is no "pre-school" land use, the modeling used "day care" to approximate emissions from a preschool.

While only 85% occupancy for the whole project, Phase 2 and Phase 3 existing are assumed fully occupied to account for moving occupants of Phase 1 to Phases 2 and 3 while Phase 1 is being rebuilt.

*BAAQMD sets limits to the VOC content for architectural coatings. CalEEMod defaults have been adjusted to meet these requirements. The BAAQMD requirements can be found at: http://www.baaqmd.gov/~media/Files/Rg8-3_advisory_2_15-2011-FINAL.ashx

¹ Combined Daily is the average daily emissions over the entire 7.5 year construction period.

Potrero HOPE

Construction Reduction Measures

Reduction Requirements:

- RM-1: At the beginning of construction activities, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 3 off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 39 percent.
- RM-2: For all construction occurring after 2016, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 4 interim off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 21 percent from Tier 3 engines.

¹ Combined Daily is the average daily emissions over the entire 9 year construction period.

² Combined Annual is the average annual emissions over the entire 9 year construction period.

Potrero HOPE

Construction Reduction Measures

Reduction Requirements:

- RM-1: At the beginning of construction activities, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 3 off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 39 percent.
- RM-2: For all construction occurring after 2016, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 4 interim off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 21 percent from Tier 3 engines.

Construction Reduction Measures

Reduction Requirements:

- RM-1: At the beginning of construction activities, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 3 off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 39 percent.
- RM-2: For all construction occurring after 2016, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 4 interim off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 21 percent from Tier 3 engines.

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction only for offsite emissions - onsite construction emissions calculated separately

Land Use - Based on project phasing

Construction Phase - Earliest Phase 3 construction for Alt 2. Demo and Grading will be same for offsite emissions as Proposed Project

Off-road Equipment - no onsite emissions

Off-road Equipment - no onsite emissions. Equipment from project description

Off-road Equipment - no onsite emissions

Vehicle Trips - No operational

Woodstoves - no op

Area Coating - no operational

Energy Use - no operational

Landscape Equipment - no op

Water And Wastewater - no operational

Solid Waste - no op

Construction Off-road Equipment Mitigation -

| | Retail | strip mall | | | 5 | 74.790 | 373.95075 | |
| | Recreational | Community Center* | | | 0 | 11.368 | 0 | |
| Total | | | 1280 | | 39 | | | 2919 |

*Because there is no "Senior housing" land use, the "Apartment mid rise" land use was used in the modeling. Because there is no "community center" land use in CalEEMod, the model used the "Library" landuse to approximate emissions from a community center. Further, as there is no "pre-school" land use, the modeling used "day care" to approximate emissions from a preschool.

While only 85% occupancy for the whole project, Phase 2 and Phase 3 existing are assumed fully occupied to account for moving occupants of Phase 1 to Phases 2 and 3 while Phase 1 is being rebuilt.

*BAAQMD sets limits to the VOC content for architectural coatings. CalEEMod defaults have been adjusted to meet these requirements. The BAAQMD requirements can be found at: http://www.baaqmd.gov/~media/Files/Rg8-3_advisory_2_15-2011-FINAL.ashx

SOURCE: Atkins 2014, and CalEEMod Modeling Output (2013).

- a. Net operational build-out is the sum of the operational emissions from all Project Phases and the generator minus the emissions from existing land uses. It represents the anticipated daily or annual emissions after the completion of all construction activities.
- b. Emissions for Interim Year scenarios vary based on the phase being constructed, the construction activities during that year, the pollutant sources, and the completed phases that are in operation. There is no one Development Scenario that results in the "worst case" emissions for each criteria pollutant and each year. Therefore, for each year the highest pollutant source is reported regardless of the development scenario that it originates from. This represents a conservative analysis as depending on the Development Scenario implemented some Interim year emissions will be less than reported here.

San Francisco County, Annual**

1.0 Project Characteristics

1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---------------------|--------|---------------|-------------|--------------------|------------|
| Apartments Low Rise | 139.00 | Dwelling Unit | 3.84 | 139,000.00 | 317 |
| Condo/Townhouse | 342.00 | Dwelling Unit | 8.49 | 342,000.00 | 780 |
| Strip Mall | 5.00 | 1000sqft | 0.03 | 5,000.00 | 0 |

1.2 Other Project Characteristics

| | | | | | |
|--------------------------------|--------------------------------|--------------------------------|-------|----------------------------------|-------|
| Urbanization | Urban | Wind Speed (m/s) | 4.6 | Precipitation Freq (Days) | 64 |
| Climate Zone | 5 | | | Operational Year | 2024 |
| Utility Company | Pacific Gas & Electric Company | | | | |
| CO2 Intensity (lb/MWhr) | 641.35 | CH4 Intensity (lb/MWhr) | 0.029 | N2O Intensity (lb/MWhr) | 0.006 |

1.3 User Entered Comments & Non-Default Data

- Project Characteristics - No construction
- Land Use - based on project data
- Construction Phase - no construction
- Off-road Equipment - no construction
- Vehicle Trips - based on project specifics
- Woodstoves - no wood stoves or fireplaces
- Energy Use - same as original Proposed Project
- Area Mitigation -

SOURCE: Atkins 2014, and CalEEMod Modeling Output (2013).

a. Net operational build-out is the sum of the operational emissions from all Project Phases and the generator minus the emissions from existing land uses. It represents the anticipated daily or annual emissions after the completion of all construction activities.

b. Emissions for Interim Year scenarios vary based on the phase being constructed, the construction activities during that year, the pollutant sources, and the completed phases that are in operation. There is no one Development Scenario that results in the "worst case" emissions for each criteria pollutant and each year. Therefore, for each year the highest pollutant source is reported regardless of the development scenario that it originates from. This represents a conservative analysis as depending on the Development Scenario implemented some interim year emissions will be less than reported here.

Source: Atkins 2013 – CalEEMod Modeling Output.

^a Net operational build-out is the sum of the operational emissions from all Project Phases and the generator minus the emissions from existing land uses. It represents the anticipated daily or annual emissions after the completion of all construction activities.

^b Emissions for Interim Year scenarios vary based on the phase being constructed, the construction activities during that year, the pollutant sources, and the completed phases that are in operation. There is no one Development Scenario that results in the "worst case" emissions for each criteria pollutant and each year. Therefore, for each year the highest pollutant source is reported regardless of the development scenario that it originates from. This represents a conservative analysis as depending on the Development Scenario implemented some interim year emissions will be less than reported here.

¹ Combined Daily is the average daily emissions over the entire 10.33 year construction period.

² Combined Annual is the average annual emissions over the entire 10.33 year construction period.

Potrero HOPE Construction Reduction Measures

Reduction Requirements:

- RM-1: At the beginning of construction activities, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 3 off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 39 percent.
- RM-2: For all construction occurring after 2016, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 4 interim off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 21 percent from Tier 3 engines.

SOURCE: Atkins 2014

a. Net operational build-out is the sum of the operational emissions from all Project Phases and the generator minus the emissions from existing land uses. It represents the anticipated daily or annual emissions after the completion of all construction activities.

b. Emissions for Interim Year scenarios vary based on the phase being constructed, the construction activities during that year, the pollutant sources, and the completed phases that are in operation. There is no one Development Scenario that results in the "worst case" emissions for each criteria pollutant and each year. Therefore, for each year the highest pollutant source is reported regardless of the development scenario that it originates from. This represents a conservative analysis as depending on the Development Scenario implemented some interim year emissions will be less than reported here.

¹ Combined Daily is the average daily emissions over the entire 9 year construction period.

Potrero HOPE Construction Reduction Measures

Reduction Requirements:

- RM-1: At the beginning of construction activities, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 3 off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 39 percent.
- RM-2: For all construction occurring after 2016, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 4 interim off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 21 percent from Tier 3 engines.

¹ Combined Daily is the average daily emissions over the entire 7.5 year construction period.

Potrero HOPE Construction Reduction Measures

Reduction Requirements:

- RM-1: At the beginning of construction activities, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 3 off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 39 percent.
- RM-2: For all construction occurring after 2016, all off-road construction equipment greater than 50 hp shall have engines that meet or exceed USEPA or ARB Tier 4 interim off-road emission standards, or the Project Sponsor must prepare a construction emissions minimization plan designated to reduce NO_x by a minimum of 21 percent from Tier 3 engines.

ERRATA

To: Jessica Range
From: Heather Dubois, Atkins
Subject: Errata to the Potrero AQTR-4 (Final) dated March 5, 2014.
Date: June 10, 2014

This Errata document outlines minor changes and additional discussion for the analysis within the *Potrero AQTR-4 (Final)* document dated March 5, 2014 (AQTR). These edits represent typographical errors that occurred within some of the tables within the AQTR, as well as a brief discussion as to why the off-site residential receptor location changed between the unreduced cumulative risk and the reduced cumulative risk analysis. In addition, the Errata document adds the project geodatabase as an appendix to the AQTR. The Errata document identifies text changes to the AQTR using ~~striketrough~~ for removals and double underline for insertions.

In AQTR Table 13, Reduced Project-Related PM_{2.5} Concentrations, on p.44, the off-site residential receptor number was mislabeled and the Universal Transverse Mercator East and North (UTM-E and UTM-N) location designations had typographical errors. The error in receptor number is a result of a translation error between the modeling receptor designation and the receptor designation in the geodatabase. The concentration values do not change.

| Table 13 Reduced Project-Related PM_{2.5} Concentrations | | | | | | |

 Values may not add due to rounding.

In the AQTR, for the cumulative risk analysis, the location identified as the maximum exposed off-site residential receptor (MEIR) changes once project emissions are reduced. This is due to the contribution of ambient risk levels in determining total cumulative emissions. Cumulative risk is determined by adding ambient risk to project risk. In AQTR Table 14, Cumulative Risk, on p. 45, the MEIR is identified as receptor number 2455. At this location, unmitigated project risk is 113 per million and ambient risk is 13 per million resulting in total unmitigated risk of 127 per million. Mitigated project risk at this location is 11.14 per million. Ambient risk remains the same resulting in a total reduced cumulative risk of 24.58. In Table 15, Reduced Cumulative Risk, on p. 46, the MEIR is identified as receptor number 2471. At this location, unmitigated project risk is 92 per million and ambient risk is 23 per million resulting in total unmitigated risk of 115 per million. Mitigated project risk at this location is 10.85 per million. Ambient risk remains the same resulting in a total reduced cumulative risk of 34.29. As detailed in the following table, with the unreduced cumulative risk the project levels represent the bulk of the risk and ambient concentrations do not sway the results. Once the reductions are accounted for,

the ambient concentrations (which vary from location to location) have a greater contribution to the total cumulative risk levels.

| | <i>Receptor 2455</i> | <i>Receptor 2471</i> |
|-----------------------------|----------------------|----------------------|
| Unreduced Project Risk | 113 | 92 |
| Unreduced Ambient Risk | 13 | 23 |
| Total Unreduced Risk | 127 | 115 |
| Reduced Project Risk | 11.14 | 10.85 |
| Reduced Ambient Risk | 13.44 | 23.44 |
| Total Unreduced Risk | 24.58 | 34.29 |

* Values may not add due to rounding

In AQTR Table 16, Cumulative PM_{2.5} Concentrations, on p. 48, the project PM_{2.5} concentration for the off-site residential receptor was entered incorrectly; however, the total project concentration does not change.

| Table 16 Cumulative PM_{2.5} Concentrations | | | | | | |
|--|-------------------|--------|---------|----------------|--------------|--|

SOURCE: Atkins (2013).

In AQTR Table 17, Reduced Cumulative PM_{2.5} Concentrations, on p. 49, the off-site receptor number was entered incorrectly due to a translation error between the modeling program

designations and the geodatabase designations and the UTME and UTMN values had typographical errors. The concentration values do not change.

 Values may not add due to rounding.

The last edit to the AQTR is on p. 50. In Table 18, Reduced Cumulative PM_{2.5} Concentrations at Buildout, the off-site residential and off-site school receptor numbers were mislabeled due to a translation error between the modeling program designations and the geodatabase designations. The concentration values do not change.

| Table 18 Reduced Cumulative PM_{2.5} Concentrations At Buildout | | | | | | |

In addition, the AQTR did not include the geodatabase developed for the City of San Francisco based on the project analysis as an appendix to the AQTR. As requested by the City and included as both an electronic file (the actual geodatabase) and a PDF of the database content, the geodatabase is now included as Appendix J of the AQTR. The PDF of the geodatabase with project content is included as Attachment A, Geodatabase's Project Content, to this Errata.

Geodatabase Project Content Column headers and description of data

This modeling was conducted by Atkins as part of the Air Quality Technical Report (AQTR) done for the Potrero Hope SF project, Planning Department Case No. 2010.0305E. The geodatabase is included as Appendix J to the AQTR.

| Geodatabase Column Name | Corresponding Description |
|------------------------------------|--|
| Construction_Cancer | Incremental cancer risk from project construction activities at the receptor location. |
| Roadway_2025_Cancer | Incremental cancer risk from project related diesel fueled and non-diesel fueled, vehicular activity at the receptor location beginning in year 2025. |
| StationarySource_Cancer | Incremental cancer risk from project related stationary source activity at the receptor location. |
| Total_Project_Cancer | Sum of project cancer risk at the receptor location from: Construction + Stationary Sources + Roadways |
| Cumulative_2014_Risk | Total Project cancer risk plus the total existing 2014 Cancer Risk |
| MaxConstruction_PM25 | Maximum PM _{2.5} concentration at the receptor location due to project construction activities estimated between 2015 and 2025. |
| Roadway_2025_PM25 | PM _{2.5} concentration at the receptor location due to project related vehicular activities for the year 2025. |
| StationarySource_PM25 | PM _{2.5} concentration at the receptor location due to project related stationary source activities. |
| Total_Project_PM25_Operations | PM _{2.5} concentration at the receptor location due to project related vehicular activities and stationary source activities. |
| Cumulative_2014_PM2.5_Construction | Total Project PM _{2.5} concentration during construction plus the total existing 2014 PM _{2.5} concentrations. |
| Cumulative_2014_PM2.5_Buildout | Total Project PM _{2.5} concentration at buildout plus the total existing 2014 PM _{2.5} concentrations after construction is completed. |

ERRATA

To: Jessica Range
From: Heather Dubois, Atkins
Subject: Errata to the Potrero Hope SF Alternatives Analysis dated March 5, 2014.
Date: June 10, 2014

This Errata document outlines minor changes and additional discussion for the analysis within the *Potrero Hope SF Alternatives Analysis* document dated March 5, 2014 (Alternatives Analysis). These edits represent typographical errors that occurred within some of the tables within the AQTR. In addition, we now have a brief discussion as to why the off-site residential receptor location changed between the unreduced cumulative risk and the reduced cumulative risk analysis. The Errata document identifies text changes to the AQTR using ~~striketrough~~ for removals and double underline for insertions. These changes to the text and tables do not change the analysis or conclusions for the assessment. Therefore, no change to the CEQA conclusions has occurred.

In Alternatives Analysis Table 11, Reduced Project-Related PM_{2.5} Concentrations, on p. 13, the off-site residential receptor number was mislabeled and the Universal Transverse Mercator East and North (UTM-E and UTM-N) location designations had typographical errors. The concentration values do not change.

SOURCE: Atkins (2013, 2014).
 N/A = not applicable to that scenario

In the Alternatives Analysis, for the cumulative risk analysis the location identified as the maximum exposed off-site residential receptor (MEIR) changes once project emissions are reduced. This is due to the contribution of ambient risk levels in determining total cumulative emissions. Cumulative risk is determined by adding ambient risk to project risk. In Alternatives Analysis Table 12, Alternative 1 – Unreduced Cumulative Risk, on p. 14, MEIR is identified as receptor number 2455. At this location, unmitigated project risk is 112 per million and ambient risk is 13 per million resulting in total unmitigated risk of 125 per million. Mitigated project risk at this location is 9.40 per million. Ambient risk remains the same resulting in a total reduced cumulative risk of 22.84. In Table 13, Alternative 1 – Reduced Cumulative Risk, on p. 15, the MEIR is identified as receptor number 2471. At this location, unmitigated project risk is 91 per million and ambient risk is 23 per million resulting in total unmitigated risk of 114 per million. Mitigated project risk at this location is 9.12 per million. Ambient risk remains the same resulting in a total reduced cumulative risk of 32.57. As detailed in the following table, with the unreduced cumulative risk the project levels represent the bulk of the risk and ambient

concentrations do not sway the results. Once the reductions are accounted for, the ambient concentrations (which vary from location to location) have a greater contribution to the total cumulative risk levels.

| RISK PER MILLION | | |
|------------------------------------|----------------------|----------------------|
| | <i>Receptor 2455</i> | <i>Receptor 2471</i> |
| Unreduced Project Risk | 112 | 91 |
| Unreduced Ambient Risk | 13 | 23 |
| <i>Total Unreduced Risk</i> | <i>125</i> | <i>114</i> |
| Reduced Project Risk | 9.40 | 9.12 |
| Reduced Ambient Risk | 13.44 | 23.44 |
| <i>Total Unreduced Risk</i> | <i>22.84</i> | <i>32.57</i> |

* Values may not add due to rounding

In Alternatives Analysis Table 13, Alternative 1 – Reduced Cumulative Risk, on p. 15, the values for the ambient and total off-site residential receptor were entered incorrectly. The table is corrected as follows.

| Table 13 Alternative 1 – Reduced Cumulative Risk | | | | | | | | |
|---|-------------------|--------|---------|----------------|--------------|-------------------------------------|--------------------------------|--------------------------------------|
| Scenario | Receptor Location | | | Receptor Type | Source | Maximum Cancer Risk (per million) | Mean Cancer Risk (per million) | Mean +1 SD Cancer Risk (per million) |
| | # | UTM E | UTM N | | | | | |

In Alternatives Analysis Table 14, Alternative 1 – Unreduced Cumulative PM_{2.5} Concentrations, on p. 16, the off-site residential receptor location designation was not updated when the location in the *Potrero HOPE Air Quality Technical Report* dated March 5, 2014 (AQTR), was updated. In addition the project level concentration from the AQTR was copied into the calculations for the Alternatives Analysis incorrectly resulting in inaccurate values for the project and total PM_{2.5} calculations in the Alternatives Analysis. Table 14 is corrected as follows.

| Table 14 Alternative 1 – Unreduced Cumulative PM_{2.5} Concentrations | | | | | | |
|--|-------------------|---------------|----------------|----------------|--------------|--|
| Scenario | Receptor Location | | | Receptor Type | Source | Maximum PM _{2.5} Concentration (µg/m ³) |
| | # | UTME | UTMN | | | |

* There are no vehicle trips or VMT increases associated with Alternative 2; therefore, there is no additional roadway risk.

** There is no generator associated with Alternative 2

As discussed previously, the location identified as the maximum exposed cumulative off-site residential receptor (MEIR) changes once project emissions are reduced. Alternatives Analysis Table 26, Alternative 2 – Unreduced Cumulative Risk, on p. 27, shows the off-site residential receptor location at receptor number 2455. Alternatives Analysis Table 27, Alternative 2 – Reduced Cumulative Risk, p. 28, shows the off-site residential receptor location at receptor number 2471. The following table shows the differences between the two locations and the influence of ambient risk on the total reduced cumulative risk levels.

| | <i>Receptor 2455</i> | <i>Receptor 2471</i> |
|-----------------------------|----------------------|----------------------|
| Unreduced Project Risk | 97 | 79 |
| Unreduced Ambient Risk | 13 | 23 |
| Total Unreduced Risk | 110 | 101 |
| Reduced Project Risk | 8.00 | 7.74 |
| Reduced Ambient Risk | 13.44 | 23.44 |
| Total Unreduced Risk | 21.44 | 31.18 |

* Values may not add due to rounding

In Alternatives Analysis Table 27, Alternative 2 – Reduced Cumulative Risk, on p. 28, the values for the ambient and total off-site residential receptor were entered incorrectly. The table is corrected as follows.

| Table 27 Alternative 2 – Reduced Cumulative Risk | | | | | | | | |
