Community Plan Exemption Checklist

Case No.: 2013.1520E
Project Address: 155 De Haro Street
Zoning: PDR-1-G (Production, Distribution, Repair - General) Zoning District
58-X Height and Bulk District
Block/Lot: 3913/005
Lot Size: 40,741 square feet
Plan Area: Eastern Neighborhoods Area Plan
Project Sponsor: Harvey Hacker, Harvey Hacker Architects, (415) 957-0579
Staff Contact: Don Lewis – (415) 575-9168
don.lewis@sfgov.org

PROJECT DESCRIPTION

The project site is located on the east side of De Haro Street between Berry and 15th streets in the Potrero Hill neighborhood. The project site is occupied by two 28-foot-tall, one-story, industrial warehouse structures that total approximately 16,900 square feet in size with 20 off-street parking spaces along De Haro Street. The existing structures were both constructed in 1969. One structure fronts on De Haro Street at the front of the lot, which is currently being used as a fire sprinkler supply and distribution warehouse, and the other structure that fronts on Carolina Street at the rear of the lot, is currently being used as a towing services headquarters. The proposed project includes the renovation of both structures and the horizontal expansion of 15,405 square feet in order to adjoin the two structures into one. The proposed use of the entire project site would be wholesale furniture sales. The finished building would be a 28-foot-tall, one-story with mezzanine, industrial warehouse structure approximately 32,330 square feet in size with 31 off-street parking spaces, one freight loading space, three Class 1 bicycle spaces, and two Class 2 bicycle spaces. Access to the project site would be from five curb cuts located on De Haro Street. The renovation of the existing structures includes new exterior siding, windows, and mezzanine levels. The proposed project would also include new landscaping and ten new street trees along De Haro Street. During the approximately 9-month construction period, the proposed project would require two feet of excavation below ground surface and approximately 45 cubic yards of soil is proposed to be removed from the project site. The project site is located within the Showplace Square/Potrero Hill area of the Eastern Neighborhoods Plan Area.

PROJECT APPROVAL

The proposed project at 155 De Haro Street would require a Building Permit from the Department of Building Inspections (DBI) for the proposed construction on the subject property. The issuance of the building permit by DBI is the Approval Action. The Approval Action date establishes the start of the 30-day appeal period for this CEQA exemption determination pursuant to Section 31.04(h) of the San Francisco Administrative Code.

EVALUATION OF ENVIRONMENTAL EFFECTS

This Community Plan Exemption (CPE) Checklist evaluates whether the environmental impacts of the proposed project are addressed in the Programmatic Environmental Impact Report for the Eastern Neighborhoods Rezoning and Area Plans (Eastern Neighborhoods PEIR). The CPE Checklist indicates whether the proposed project would result in significant impacts that: (1) are peculiar to the project or project site; (2) were not identified as significant project-level, cumulative, or off-site effects in the PEIR; or (3) are previously identified significant effects, which as a result of substantial new information that was not known at the time that the Eastern Neighborhoods PEIR was certified, are determined to have a more severe adverse impact than discussed in the PEIR. Such impacts, if any, will be evaluated in a project-specific Mitigated Negative Declaration or Environmental Impact Report. If no such impacts are identified, the proposed project is exempt from further environmental review in accordance with Public Resources Code Section 21083.3 and CEQA Guidelines Section 15183.

Mitigation measures identified in the PEIR are discussed under each topic area, and measures that are applicable to the proposed project are provided under the Mitigation Measures Section at the end of this checklist.

The Eastern Neighborhoods PEIR identified significant impacts related to land use, transportation, cultural resources, shadow, noise, air quality, and hazardous materials. Additionally, the PEIR identified significant cumulative impacts related to land use, transportation, and cultural resources. Mitigation measures were identified for the above impacts and reduced all impacts to less-than-significant except for those related to land use (cumulative impacts on PDR use), transportation (program-level and cumulative traffic impacts at nine intersections; program-level and cumulative transit impacts on seven Muni lines), cultural resources (cumulative impacts from demolition of historical resources), and shadow (program-level impacts on parks).

The proposed project includes the renovation of two industrial warehouse structures and the horizontal expansion of 15,405 square feet in order to adjoin the two structures into one. The proposed use of the entire project site would be wholesale furniture sales. The finished building would be a 28-foot-tall, one-story with mezzanine, industrial warehouse structure approximately 32,330 square feet in size with 31 off-street parking spaces and one freight loading space. As discussed below in this checklist, the proposed project would not result in new, significant environmental effects, or effects of greater severity than were already analyzed and disclosed in the Eastern Neighborhoods PEIR.

AESTHETICS AND PARKING IMPACTS FOR TRANSIT PRIORITY INFILL DEVELOPMENT

Public Resources Code Section 21099(d), effective January 1, 2014, provides that, “aesthetics and parking impacts of a residential, mixed-use residential, or employment center project on an infill site located within a transit priority area shall not be considered significant impacts on the environment.” Accordingly, aesthetics and parking are no longer to be considered in determining if a project has the potential to result in significant environmental effects for projects that meet all of the following three criteria:

a) The project is in a transit priority area;

b) The project is on an infill site; and

---

c) The project is residential, mixed-use residential, or an employment center.

The proposed project meets each of the above three criteria and thus, this checklist does not consider aesthetics or parking in determining the significance of project impacts under CEQA. The Planning Department acknowledges that parking conditions may be of interest to the public and the decision makers. Therefore, this determination presents a parking demand analysis for informational purposes, in the Transportation and Circulation Section.

---

### Topics:

<table>
<thead>
<tr>
<th>Significant Impact Peculiar to Project or Project Site</th>
<th>Significant Impact not Identified in PEIR</th>
<th>Significant Impact due to Substantial New Information</th>
<th>No Significant Impact not Previously Identified in PEIR</th>
</tr>
</thead>
</table>

#### 1. LAND USE AND LAND USE PLANNING—Would the project:

- a) Physically divide an established community?
  - ☐
  - ☐
  - ☐
  - ☒

- b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?
  - ☐
  - ☐
  - ☐
  - ☒

- c) Have a substantial impact upon the existing character of the vicinity?
  - ☐
  - ☐
  - ☐
  - ☒

---

The Eastern Neighborhoods PEIR determined that adoption of the Area Plans would result in an unavoidable significant impact on land use due to the cumulative loss of PDR. As a result of the Eastern Neighborhoods rezoning process, the project site has been rezoned from M-2 (Heavy Industrial) to PDR-1-G (Production, Distribution and Repair-1-General) Use District. The proposed project includes the renovation of two industrial warehouse (PDR) structures and the horizontal expansion of 15,405 square feet in order to adjoin the two structures into one. The finished building would be a 28-foot-tall, one-story with mezzanine, warehouse structure approximately 32,330 square feet in size with 31 off-street parking spaces and one freight loading space. The proposed use of the project site would be wholesale furniture sales, which is considered a PDR use. Since the proposed project would increase the amount of PDR use at the project site, the proposed project would not contribute to any impact related to loss of PDR uses that was identified in the Eastern Neighborhoods PEIR.

The Eastern Neighborhoods PEIR determined that implementation of the Area Plans would not create any new physical barriers in the Easter Neighborhoods because the rezoning and Area Plans do not provide for any new major roadways, such as freeways that would disrupt or divide the project area or individual neighborhoods or subareas.

---

2 San Francisco Planning Department. Transit-Oriented Infill Project Eligibility Checklist for 155 De Haro Street, February 26, 2015. This document, and other cited documents, are available for review at the San Francisco Planning Department, 1650 Mission Street, Suite 400, as part of Case File No. 2013.1520E.
The Citywide Planning and Current Planning Divisions of the Planning Department have determined that the proposed project is permitted in the PDR-1-G District and is consistent with applicable bulk, density, and land uses as envisioned in the Showplace Square/Potrero Hill Area Plan. The proposed project falls within the Core Showplace Square Design District generalized zoning district, which protects the existing concentration of design-oriented PDR uses and allows a limited amount of supportive retail and office space uses. As a PDR building, the proposed project is consistent with this designation.\textsuperscript{3,4} The proposed project would not conflict with any applicable land use plan or policy adopted for the purpose of avoiding or mitigating an environmental effect.

For these reasons, implementation of the proposed project would not result in either project-level or cumulative significant impacts that were not identified in the Eastern Neighborhoods PEIR related to land use and land use planning, and no mitigation measures are necessary.

\begin{tabular}{l|c|c|c|c}
Topics: & Significant Impact Peculiar to Project or Project Site & Significant Impact not Identified in PEIR & Significant Impact due to Substantial New Information & No Significant Impact not Previously Identified in PEIR \\
\hline
2. POPULATION AND HOUSING — Would the project: & & & & \\
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)? & ☐ & ☐ & ☐ & ☒ \\
b) Displace substantial numbers of existing housing units or create demand for additional housing, necessitating the construction of replacement housing? & ☐ & ☐ & ☐ & ☒ \\
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere? & ☐ & ☐ & ☐ & ☒ \\
\end{tabular}

One of the objectives of the Eastern Neighborhoods Area Plans is to identify appropriate locations for housing in the City’s industrially zoned land to meet the citywide demand for additional housing. The PEIR concluded that an increase in population in the Plan Areas is expected to occur as a secondary effect of the proposed rezoning and that any population increase would not, in itself, result in adverse physical effects, but would serve to advance key City policy objectives, such as providing housing in appropriate locations next to Downtown and other employment generators and furthering the City’s Transit First policies. It was anticipated that the rezoning would result in an increase in both housing development and population in all of the Area Plan neighborhoods. The Eastern Neighborhoods PEIR determined that the anticipated increase in population and density would not result in significant adverse physical effects on the environment. No mitigation measures were identified in the PEIR.

\textsuperscript{3} Adam Varat, San Francisco Planning Department, Community Plan Exemption Eligibility Determination, Citywide Planning and Policy Analysis, 155 De Haro Street, February 19, 2015.

\textsuperscript{4} Joslin, Jeff, San Francisco Planning Department, Community Plan Exemption Eligibility Determination, Current Planning Analysis, 155 De Haro Street, March 6, 2015.
The proposed project includes the renovation of two industrial warehouse structures and the horizontal expansion of 15,405 square feet in order to adjoin the two structures into one. The proposed use of the entire project site would be wholesale furniture sales. The finished building would be a 28-foot-tall, one-story with mezzanine, warehouse structure approximately 32,330 square feet in size with 31 off-street parking spaces and one freight loading space. Therefore, the proposed project would not result in the displacement or elimination of any existing residential dwelling units. These direct effects of the proposed project on population and housing are within the scope of the population and housing growth anticipated under the Showplace Square/Potrero Hill Area Plan and evaluated in the Eastern Neighborhoods Plan Area PEIR.

For the above reasons, the proposed project would not result in either project-level or cumulative significant impacts on population and housing that were not identified in the Eastern Neighborhoods PEIR.

3. **CULTURAL AND PALEONTOLOGICAL RESOURCES—Would the project:**

   a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5, including those resources listed in Article 10 or Article 11 of the San Francisco Planning Code? ☒ ☐ ☐ ☒

   b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5? ☒ ☐ ☐ ☒

   c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? ☒ ☐ ☐ ☒

   d) Disturb any human remains, including those interred outside of formal cemeteries? ☒ ☐ ☐ ☒

**Historic Architectural Resources**

Pursuant to CEQA Guidelines Sections 15064.5(a)(1) and 15064.5(a)(2), historical resources are buildings or structures that are listed, or are eligible for listing, in the California Register of Historical Resources or are identified in a local register of historical resources, such as Articles 10 and 11 of the San Francisco Planning Code. The Eastern Neighborhoods PEIR determined that future development facilitated through the changes in use districts and height limits under the Eastern Neighborhoods Area Plans could have substantial adverse changes on the significance of both individual historical resources and on historical districts within the Plan Areas. The PEIR determined that approximately 32 percent of the known or potential historical resources in the Plan Areas could potentially be affected under the preferred alternative. The Eastern Neighborhoods PEIR found this impact to be significant and unavoidable. This impact was addressed in a Statement of Overriding Considerations with findings and adopted as part of the Eastern Neighborhoods Rezoning and Area Plans approval on January 19, 2009.
The PEIR identified three mitigation measures that were tasked to the Planning Department that could reduce the severity of impacts to historic resources as a result of development enabled under the Plan Areas (Mitigation K-1, K-2, and K-3). These mitigation measures were the responsibility of the Planning Department and do not apply to subsequent development projects. Demolition or substantial alteration of a historic resource typically cannot be fully mitigated; therefore, the PEIR concluded that the Eastern Neighborhoods Area Plan would have a significant and unavoidable impact on historic resources.

Specific to the project site, the existing industrial buildings, which were constructed in 1969, were included in the Showplace Square/Northeast Mission Historic Resource Survey conducted as part of the Eastern Neighborhoods Rezoning and Area Plans. The 155 De Haro Street property was given the rating of 6Z (“Found ineligible for National Register, California Register, or Local designation through survey evaluation”). The property contains a pair of corrugated steel garage/auto and truck repair buildings that are wood-framed, steel-clad structures with gabled-roofs. Both are articulated on their long sides by a row of vehicle loading docks. The project site is adjacent to but not located within the Showplace Square Heavy Timber and Steel-frame Brick Warehouse and Factory District. As such, the subject property would not be considered a historic resource pursuant CEQA and its alteration would not result in a significant impact. In addition, the project site is not located adjacent to an existing historic building.

Therefore, the proposed project would not contribute to the significant historic resource impact identified in the Eastern Neighborhoods PEIR, and no historic resource mitigation measures would apply to the proposed project.

For these reasons, the proposed project would not result in either project-level or cumulative significant impacts on historic architectural resources that were not identified in the Eastern Neighborhoods PEIR.

Archeological Resources

The Eastern Neighborhoods PEIR determined that implementation of the Area Plan could result in significant impacts on archeological resources and identified three mitigation measures that would reduce these potential impacts to less than significant levels. Eastern Neighborhoods PEIR Mitigation Measure J-1 applies to properties for which a final archeological research design and treatment plan is on file at the Northwest Information Center and the Planning Department. Mitigation Measure J-2 applies to properties for which no archeological assessment report has been prepared or for which the archeological documentation is incomplete or inadequate to serve as an evaluation of potential effects on archeological resources under CEQA. Mitigation Measure J-3, which applies to properties in the Mission Dolores Archeological District, requires that a specific archeological testing program be conducted by a qualified archeological consultant with expertise in California prehistoric and urban historical archeology.

The proposed project at 155 De Haro Street would involve approximately two feet of below ground surface (bgs) excavation and approximately 45 cubic yards of soil disturbance in an area where no previous archeological studies have been prepared. Therefore, the proposed project would be subject to Mitigation Measure J-2 (Project Mitigation Measure 1). In accordance with Mitigation Measure J-2 (full text provided in the “Mitigation Measures” section below), a Preliminary Archeological Review (PAR) was conducted by Planning Department staff archeologists, which determined that the proposed project would not adversely affect CEQA-significant archeological resources.6

---

5 San Francisco Planning Department, Summary Database of the Showplace Square/Northeast Mission Survey. May 2011. A copy of this document is available for public review at the San Francisco Planning Department, 1650 Mission Street, Suite 400, as part of Case File No. 2013.1520E.
6 Randall Dean, San Francisco Planning Department. Archeological Review Log.
For the above reasons, the proposed project would not result in either project-level or cumulative significant impacts on archeological resources that were not identified in the Eastern Neighborhoods PEIR.

The Eastern Neighborhoods PEIR anticipated that growth resulting from the zoning changes would not result in significant impacts related to pedestrians, bicyclists, loading, emergency access, or construction. As the proposed project is within the development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional impacts on pedestrians, bicyclists, loading, emergency access, or construction beyond those analyzed in the Eastern Neighborhoods PEIR.

However, the Eastern Neighborhoods PEIR anticipated that growth resulting from the zoning changes could result in significant impacts on traffic and transit ridership, and identified 11 transportation mitigation measures. Even with mitigation, however, it was anticipated that the significant adverse cumulative traffic impacts and the cumulative impacts on transit lines could not be fully mitigated. Thus, these impacts were found to be significant and unavoidable.

The project site is not located within an airport land use plan area, or in the vicinity of a private airstrip. Therefore, the Community Plan Exemption Checklist topic 4c is not applicable.
Trip Generation

The proposed project includes the renovation of two industrial warehouse structures and the horizontal expansion of 15,405 square feet in order to adjoin the two structures into one. The finished building would be a 28-foot-tall, one-story with mezzanine, warehouse structure approximately 32,330 square feet in size with 31 off-street parking spaces, one freight loading space, three Class I bicycle spaces, and two Class II bicycle spaces. The proposed use of the project site would be wholesale furniture sales.

Trip generation of the proposed project was calculated using information from the Institute of Transportation Engineers\(^7\) and the 2002 Transportation Impacts Analysis Guidelines for Environmental Review (SF Guidelines) developed by the San Francisco Planning Department for the entirety of the new building and use (i.e., no trip credit for existing uses). The proposed project would generate an estimated 162 person trips (inbound and outbound) on a weekday daily basis, consisting of 101 person trips by auto, 31 transit trips, 20 walk trips, and 10 trips by other modes. During the p.m. peak hour, the proposed project would generate an estimated 7 vehicle trips (accounting for vehicle occupancy data for this Census Tract).

Traffic

The proposed project’s vehicle trips would travel through the intersections surrounding the project block. Intersection operating conditions are characterized by the concept of Level of Service (LOS), which ranges from A to F and provides a description of an intersection’s performance based on traffic volumes, intersection capacity, and vehicle delays. LOS A represents free flow conditions, with little or no delay, while LOS F represents congested conditions, with extremely long delays; LOS D (moderately high delays) is considered the lowest acceptable level in San Francisco. The intersections near the project site (within approximately 800 feet) that were analyzed in the Eastern Neighborhoods PEIR include Rhode Island St./16th St., Potrero Ave./16th St., Rhode Island St./Division St., Division/King/De Haro, and 10th St./Division/Brannan/Potrero. Table 1 provides existing and cumulative LOS data gathered for these intersections, per the Eastern Neighborhoods Rezoning and Area Plans Transportation Study.\(^9\)

Sources: Eastern Neighborhoods Rezoning and Area Plans Transportation Study (2007)

The proposed project would generate an estimated 7 new p.m. peak hour vehicle trips that could travel through surrounding intersections. This amount of new p.m. peak hour vehicle trips would not substantially increase traffic volumes at these or other nearby intersections, would not substantially

---

\(^7\) Trip Generation Manual, 8th Edition, Institute of Transportation Engineers, pages 1722-1724. These pages are available for review at the San Francisco Planning Department, 1650 Mission Street, Suite 400, as part of Case File No. 2013.1520E.

\(^8\) San Francisco Planning Department, Transportation Calculations for 155 De Haro Street, March 2, 2015. These calculations are available for review at the San Francisco Planning Department, 1650 Mission Street, Suite 400, as part of Case File No. 2013.1520E.

\(^9\) The Eastern Neighborhoods Rezoning and Area Plans Transportation Study is available for review at the San Francisco Planning Department, 1650 Mission Street, Suite 400, as part of Case File No. 2004.0160E.
increase average delay that would cause intersections that currently operate at acceptable LOS to deteriorate to unacceptable LOS, or would not substantially increase average delay at intersections that currently operate at unacceptable LOS.

The proposed project would not contribute considerably to LOS delay conditions as its contribution of an estimated 7 new p.m. peak-hour vehicle trips would not be a substantial proportion of the overall traffic volume or the new vehicle trips generated by Eastern Neighborhoods’ Plan projects. The proposed project would also not contribute considerably to 2025 cumulative conditions and thus, the proposed project would not have any significant cumulative traffic impacts.

For the above reasons, the proposed project would not result in significant impacts on traffic that were not identified in the Eastern Neighborhoods PEIR.

**Transit**

The project site is located within a quarter mile of several local transit lines including 10-Townsend, 19-Polk, 9-San Bruno Express, and 22-Fillmore. The proposed project would be expected to generate 31 daily transit trips, including three during the p.m. peak hour. Given the availability of nearby transit, the addition of three p.m. peak hour transit trips would be accommodated by existing capacity. As such, the proposed project would not result in unacceptable levels of transit service or cause a substantial increase in delays or operating costs such that significant adverse impacts on transit service could result.

Each of the rezoning options in the Eastern Neighborhoods PEIR identified significant and unavoidable cumulative impacts relating to increases in transit ridership on Muni lines, with the Preferred Project having significant impacts on seven lines: 9-San Bruno, 22-Fillmore, 26-Valencia, 27-Bryant, 33-Stanyan, 48-Quintara/24th Street, and 49-Van Ness/Mission. Of those lines, the project site is located within a quarter-mile of Muni line 22-Fillmore. Mitigation measures proposed to address these impacts related to pursuing enhanced transit funding; conducting transit corridor and service improvements; and increasing transit accessibility, service information and storage/maintenance capabilities for Muni lines in the Eastern Neighborhoods. Even with mitigation, however, cumulative impacts on the above lines were found to remain significant and unavoidable and a Statement of Overriding Considerations related to the significant and unavoidable cumulative transit impacts was adopted as part of the PEIR Certification and Plan.

The proposed project would not contribute considerably to these conditions as its minor contribution of three p.m. peak hour transit trips would not be a substantial proportion of the overall additional transit volume generated by Eastern Neighborhood project projects. Thus, the proposed project would not contribute considerably to 2025 cumulative transit conditions and would not result in any significant cumulative transit impacts.

For the above reasons, the proposed project would not result in significant impacts that were not identified in the Eastern Neighborhoods PEIR related to transit and would not contribute considerably to cumulative transit impacts that were identified in the Eastern Neighborhoods PEIR.

**Parking**

Public Resources Code Section 21099(d), effective January 1, 2014, provides that, “aesthetics and parking impacts of a residential, mixed-use residential, or employment center project on an infill site located within a transit priority area shall not be considered significant impacts on the environment.” Accordingly, aesthetics and parking are no longer to be considered in determining if a project has the
potential to result in significant environmental effects for projects that meet all of the following three criteria:

a) The project is in a transit priority area;

b) The project is on an infill site; and

c) The project is residential, mixed-use residential, or an employment center.

The proposed project meets each of the above three criteria and thus, this determination does not consider the adequacy of parking in determining the significance of project impacts under CEQA.\(^\text{10}\) The Planning Department acknowledges that parking conditions may be of interest to the public and the decision makers. Therefore, the following parking demand analysis is provided for informational purposes only.

The parking demand for the proposed wholesale furniture sales use associated with the proposed project was determined based on the methodology presented in the Transportation Guidelines. On an average weekday, the demand for parking would be for an estimated 35 spaces. The proposed project would provide 31 off-street spaces. Thus, as proposed, the project would have an unmet parking demand of an estimated four spaces. At this location, the unmet parking demand could be accommodated within existing on-street parking spaces within a reasonable distance of the project vicinity. Additionally, the project site is well served by public transit and bicycle facilities such as transit lines 10-Townsend, 19-Polk, 9-San Bruno Express, and 22-Fillmore, and bicycle routes 23 and 40. Therefore, any unmet parking demand associated with the project would not materially affect the overall parking conditions in the project vicinity such that hazardous conditions or significant delays would be created.

Parking conditions are not static, as parking supply and demand varies from day to day, from day to night, from month to month, etc. Hence, the availability of parking spaces (or lack thereof) is not a permanent physical condition, but changes over time as people change their modes and patterns of travel. While parking conditions change over time, a substantial shortfall in parking caused by a project that creates hazardous conditions or significant delays to traffic, transit, bicycles or pedestrians could adversely affect the physical environment. Whether a shortfall in parking creates such conditions will depend on the magnitude of the shortfall and the ability of drivers to change travel patterns or switch to other travel modes. If a substantial shortfall in parking caused by a project creates hazardous conditions or significant delays in travel, such a condition could also result in secondary physical environmental impacts (e.g., air quality or noise impacts caused by congestion), depending on the project and its setting.

The absence of a ready supply of parking spaces, combined with available alternatives to auto travel (e.g., transit service, taxis, bicycles or travel by foot) and a relatively dense pattern of urban development, induces many drivers to seek and find alternative parking facilities, shift to other modes of travel, or change their overall travel habits. Any such resulting shifts to transit service or other modes (walking and biking), would be in keeping with the City’s “Transit First” policy and numerous San Francisco General Plan Polices, including those in the Transportation Element. The City’s Transit First Policy, established in the City’s Charter Article 8A, Section 8A.115, provides that “parking policies for areas well served by public transit shall be designed to encourage travel by public transportation and alternative transportation.”

The transportation analysis accounts for potential secondary effects, such as cars circling and looking for a parking space in areas of limited parking supply, by assuming that all drivers would attempt to find

\(^\text{10}\) San Francisco Planning Department, Transit-Oriented Infill Project Eligibility Checklist for 155 De Haro Street, February 26, 2015.
parking at or near the project site and then seek parking farther away if convenient parking is unavailable. The secondary effects of drivers searching for parking is typically offset by a reduction in vehicle trips due to others who are aware of constrained parking conditions in a given area, and thus choose to reach their destination by other modes (i.e. walking, biking, transit, taxi). If this occurs, any secondary environmental impacts that may result from a shortfall in parking in the vicinity of the proposed project would be minor, and the traffic assignments used in the transportation analysis, as well as in the associated air quality, noise and pedestrian safety analyses, would reasonably address potential secondary effects.

5. **NOISE—Would the project:**

</tbody>
</table>

The Eastern Neighborhoods PEIR identified potential conflicts related to residences and other noise-sensitive uses in proximity to noisy uses such as PDR, retail, entertainment, cultural/institutional/educational uses, and office uses. In addition, the Eastern Neighborhoods PEIR noted that implementation of the Eastern Neighborhoods Area Plans and Rezoning would incrementally increase traffic-generated noise on some streets in the Eastern Neighborhoods plan areas and result in construction noise impacts from pile driving and other construction activities. The Eastern Neighborhoods PEIR therefore identified six noise mitigation measures that would reduce noise impacts to less-than-significant levels.

Eastern Neighborhoods PEIR Mitigation Measures F-1 and F-2 relate to construction noise. Mitigation Measure F-1 addresses individual projects that include pile-driving, and Mitigation Measure F-2
addresses individual projects that include particularly noisy construction procedures (including pile-driving). The proposed project would utilize a shallow building foundation that does not necessitate the use of pile-driving or other construction practices generating excessive noise. Mitigation F-1 and F-2 would not be applicable to the project.

In addition, all construction activities for the proposed project (approximately 9 months) would be subject to and would comply with the San Francisco Noise Ordinance (Article 29 of the San Francisco Police Code) (Noise Ordinance). Construction noise is regulated by the Noise Ordinance. The Noise Ordinance requires that construction work be conducted in the following manner: (1) noise levels of construction equipment, other than impact tools, must not exceed 80 dBA at a distance of 100 feet from the source (the equipment generating the noise); (2) impact tools must have intake and exhaust mufflers that are approved by the Director of the Department of Public Works (DPW) or the Director of the Department of Building Inspection (DBI) to best accomplish maximum noise reduction; and (3) if the noise from the construction work would exceed the ambient noise levels at the site property line by 5 dBA, the work must not be conducted between 8:00 p.m. and 7:00 a.m. unless the Director of DPW authorizes a special permit for conducting the work during that period.

DBI is responsible for enforcing the Noise Ordinance for private construction projects during normal business hours (8:00 a.m. to 5:00 p.m.). The Police Department is responsible for enforcing the Noise Ordinance during all other hours. Nonetheless, during the construction period for the proposed project of approximately 9 months, occupants of the nearby properties could be disturbed by construction noise. Times may occur when noise could interfere with indoor activities in nearby residences and other businesses near the project site and may be considered an annoyance by occupants of nearby properties. The increase in noise in the project area during project construction would not be considered a significant impact of the proposed project, because the construction noise would be temporary, intermittent, and restricted in occurrence and level, as the contractor would be required to comply with the Noise Ordinance.

Eastern Neighborhoods PEIR Mitigation Measures F-3 and F-4 require that a detailed analysis of noise reduction requirements be conducted for new development that includes noise-sensitive uses located along streets with noise levels above 60 dBA (Ldn). The proposed project does not include noise-sensitive uses, and therefore Mitigation Measures F-3 and F-4 are not applicable.

Eastern Neighborhoods PEIR Mitigation Measure F-5 addresses impacts related to individual projects that include new noise-generating uses that would be expected to generate noise levels in excess of ambient noise in the proposed project site vicinity. The proposed project includes the renovation of two industrial warehouse structures and the horizontal expansion of 15,405 square feet in order to adjoin the two structures into one. The project site is currently being used as fire sprinkler supply and distribution warehouse and for a towing services headquarters. The proposed use of the entire site would be wholesale furniture sales. The proposed project would not introduce new noise-generating uses that would be expected to generate additional operational noise. The proposed project does not involve the location of mechanical equipment on the roof of the proposed building. Therefore, Mitigation Measure F-5 is not applicable to the proposed project.

Mitigation Measure F-6 addresses impacts from existing ambient noise levels on open space required under the Planning Code for new development that includes noise-sensitive uses. The proposed project does not include noise-sensitive uses, therefore Mitigation Measure F-6 is not applicable.
The project site is not located within an airport land use plan area, within two miles of a public airport, or in the vicinity of a private airstrip. Therefore, topic 12e and f from the CEQA Guidelines, Appendix G is not applicable.

For the above reasons, the proposed project would not result in significant noise impacts that were not identified in the Eastern Neighborhoods PEIR.

</table>

The Eastern Neighborhoods PEIR identified potentially significant air quality impacts resulting from construction activities and impacts to sensitive land uses as a result of exposure to elevated levels of diesel particulate matter (DPM) and other toxic air contaminants (TACs). The Eastern Neighborhoods PEIR identified four mitigation measures that would reduce these air quality impacts to less-than-significant levels and stated that with implementation of identified mitigation measures, the Area Plan would be consistent with the Bay Area 2005 Ozone Strategy, the applicable air quality plan at that time. All other air quality impacts were found to be less than significant.

Eastern Neighborhoods PEIR Mitigation Measure G-1 addresses air quality impacts during construction, PEIR Mitigation Measure G-2 addresses the siting of sensitive land uses near sources of TACs and PEIR Mitigation Measures G-3 and G-4 address proposed uses that would emit DPM and other TACs.

Construction Dust Control

Eastern Neighborhoods PEIR Mitigation Measure G-1 Construction Air Quality requires individual projects involving construction activities to include dust control measures and to maintain and operate construction equipment so as to minimize exhaust emissions of particulates and other pollutants. The San

---

11 The Bay Area Air Quality Management District (BAAQMD) considers sensitive receptors as: children, adults or seniors occupying or residing in: 1) residential dwellings, including apartments, houses, condominiums, 2) schools, colleges, and universities, 3) daycares, 4) hospitals, and 5) senior care facilities. BAAQMD, Recommended Methods for Screening and Modeling Local Risks and Hazards, May 2011, page 12.
Francisco Board of Supervisors subsequently approved a series of amendments to the San Francisco Building and Health Codes, generally referred to as the Construction Dust Control Ordinance (Ordinance 176-08, effective July 30, 2008). The intent of the Construction Dust Control Ordinance is to reduce the quantity of fugitive dust generated during site preparation, demolition, and construction work in order to protect the health of the general public and of on-site workers, minimize public nuisance complaints, and to avoid orders to stop work by DBI. Project-related construction activities would result in construction dust, primarily from ground-disturbing activities.

For projects over one half-acre, such as the proposed project, the Dust Control Ordinance requires that the project sponsor submit a Dust Control Plan for approval by the San Francisco Department of Public Health. DBI will not issue a building permit without written notification from the Director of Public Health that the applicant has a site-specific Dust Control Plan, unless the Director waives the requirement. The site-specific Dust Control Plan would require the project sponsor to implement additional dust control measures such as installation of dust curtains and windbreaks and to provide independent third-party inspections and monitoring, provide a public complaint hotline, and suspend construction during high wind conditions.

The regulations and procedures set forth by the San Francisco Dust Control Ordinance would ensure that construction dust impacts would not be significant. These requirements supersede the dust control provisions of PEIR Mitigation Measure G-1. Therefore, the portion of PEIR Mitigation Measure G-1 Construction Air Quality that addresses dust control is no longer applicable to the proposed project.

Criteria Air Pollutants

While the Eastern Neighborhoods PEIR determined that at a program-level the Eastern Neighborhoods Rezoning and Area Plans would not result in significant regional air quality impacts, the PEIR states that “Individual development projects undertaken in the future pursuant to the new zoning and area plans would be subject to a significance determination based on the BAAQMD’s quantitative thresholds for individual projects.”12 The BAAQMD’s CEQA Air Quality Guidelines (Air Quality Guidelines) provide screening criteria13 for determining whether a project’s criteria air pollutant emissions would violate an air quality standard, contribute to an existing or projected air quality violation, or result in a cumulatively considerable net increase in criteria air pollutants. Pursuant to the Air Quality Guidelines, projects that meet the screening criteria do not have a significant impact related to criteria air pollutants. Criteria air pollutant emissions during construction and operation of the proposed project would meet the Air Quality Guidelines screening criteria, as implementation of the proposed project would result in 32,330 square feet of wholesale furniture sales which is well below the criteria air pollutant screening sizes for a Warehouse (864,000 square feet for operational and 259,000 square feet for construction). Therefore, the project would not have a significant impact related to criteria air pollutants, and a detailed air quality assessment is not required.

Health Risk

Subsequent to certification of the Eastern Neighborhoods PEIR, San Francisco Board of Supervisors approved a series of amendments to the San Francisco Building and Health Codes, generally referred to as the Enhanced Ventilation Required for Urban Infill Sensitive Use Developments or Health Code, Article 38 (Ordinance 224-14, effective December 8, 2014)(Article 38). The purpose of Article 38 is to

---

13 Bay Area Air Quality Management District, CEQA Air Quality Guidelines, updated May 2011. See pp. 3-2 to 3-3.
protect the public health and welfare by establishing an Air Pollutant Exposure Zone and imposing an enhanced ventilation requirement for all urban infill sensitive use development within the Air Pollutant Exposure Zone. The Air Pollutant Exposure Zone as defined in Article 38 are areas that, based on modeling of all known air pollutant sources, exceed health protective standards for cumulative PM$_{2.5}$ concentration, cumulative excess cancer risk, and incorporates health vulnerability factors and proximity to freeways. Projects within the Air Pollutant Exposure Zone require special consideration to determine whether the project’s activities would expose sensitive receptors to substantial air pollutant concentrations or add emissions to areas already adversely affected by poor air quality.

Construction

The project site is not located within an identified Air Pollutant Exposure Zone. Therefore, the ambient health risk to sensitive receptors from air pollutants is not considered substantial and the remainder of Mitigation Measure G-1 that requires the minimization of construction exhaust emissions is not applicable to the proposed project.

Siting Sensitive Land Uses

The proposed project would not include a sensitive land use for purposes of air quality evaluation. Therefore, PEIR Mitigation Measure G-2 Air Quality for Sensitive Land Uses is not applicable to the proposed project.

Siting New Sources

The proposed project would not be expected to generate 100 trucks per day or 40 refrigerated trucks per day. Therefore, Eastern Neighborhoods PEIR Mitigation Measure G-3 is not applicable. In addition, the proposed project would not include any sources that would emit DPM or other TACs. Therefore, Eastern Neighborhoods PEIR Mitigation Measure G-4 is not applicable and impacts related to siting new sources of pollutants would be less than significant.

Conclusion

For the above reasons, none of the Eastern Neighborhoods PEIR air quality mitigation measures are applicable to the proposed project and the project would not result in significant air quality impacts that were not identified in the PEIR.

14 The proposed wholesale furniture sales use does not include furniture manufacturing or repair.
The Eastern Neighborhoods PEIR assessed the GHG emissions that could result from rezoning of the Showplace Square/Potrero Hill Area Plan under the three rezoning options. The Eastern Neighborhoods Rezoning Options A, B, and C are anticipated to result in GHG emissions on the order of 4.2, 4.3 and 4.5 metric tons of CO₂E\textsuperscript{15} per service population,\textsuperscript{16} respectively. The Eastern Neighborhoods PEIR concluded that the resulting GHG emissions from the three options analyzed in the Eastern Neighborhoods Area Plans would be less than significant. No mitigation measures were identified in the PEIR.

Regulations outlined in San Francisco’s Strategies to Address Greenhouse Gas Emissions have proven effective as San Francisco’s GHG emissions have measurably reduced when compared to 1990 emissions levels, demonstrating that the City has met and exceeded EO S-3-05, AB 32, and the Bay Area 2010 Clean Air Plan GHG reduction goals for the year 2020. The proposed project was determined to be consistent with San Francisco’s GHG Reduction Strategy.\textsuperscript{17} Other existing regulations, such as those implemented through AB 32, will continue to reduce a proposed project’s contribution to climate change. Therefore, the proposed project’s GHG emissions would not conflict with state, regional, and local GHG reduction plans and regulations, and thus the proposed project’s contribution to GHG emissions would not be cumulatively considerable or generate GHG emissions, either directly or indirectly, that would have a significant impact on the environment.

As the proposed project is within the development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional impacts on greenhouse gas emissions (including cumulative impacts) beyond those analyzed in the Eastern Neighborhoods PEIR.

</tbody>
</table>

Wind

Based upon experience of the Planning Department in reviewing wind analyses and expert opinion on other projects, it is generally (but not always) the case that projects under 80 feet in height do not have the potential to generate significant wind impacts. The proposed 28-foot-tall building would be similar in

\textsuperscript{15} CO₂E, defined as equivalent Carbon Dioxide, is a quantity that describes other greenhouse gases in terms of the amount of Carbon Dioxide that would have an equal global warming potential.

\textsuperscript{16} Memorandum from Jessica Range to Environmental Planning staff, Greenhouse Gas Analyses for Community Plan Exemptions in Eastern Neighborhoods, April 20, 2010. This memorandum provides an overview of the GHG analysis conducted for the Eastern Neighborhoods PEIR and provides an analysis of the emissions using a service population (equivalent of total number of residents and employees) metric.

\textsuperscript{17} Greenhouse Gas Analysis: Compliance Checklist for 155 De Haro Street. February 26, 2015.
height to the existing one- and two-story buildings in the surrounding area. For the above reasons, the proposed project is not anticipated to cause significant impacts related to wind that were not identified in the Eastern Neighborhoods PEIR.

Shadow

Planning Code Section 295 generally prohibits new structures above 40 feet in height that would cast additional shadows on open space that is under the jurisdiction of the San Francisco Recreation and Park Commission between one hour after sunrise and one hour before sunset, at any time of the year, unless that shadow would not result in a significant adverse effect on the use of the open space. Under the Eastern Neighborhoods Rezoning and Area Plans, sites surrounding parks could be redeveloped with taller buildings without triggering Section 295 of the Planning Code because certain parks are not subject to Section 295 of the Planning Code (i.e., under jurisdiction of departments other than the Recreation and Parks Department or privately owned). The Eastern Neighborhoods PEIR could not conclude that the rezoning and community plans would result in less-than-significant shadow impacts because the feasibility of complete mitigation for potential new shadow impacts of unknown proposed proposals could not be determined at that time. Therefore, the PEIR determined shadow impacts to be significant and unavoidable. No mitigation measures were identified in the PEIR.

Implementation of the proposed project would result in an approximately 28-foot-tall building; therefore, a preliminary shadow fan analysis was not required to determine whether the proposed project would have the potential to cast new shadow on nearby parks. The proposed project would shade portions of nearby streets, sidewalks, and private property at times within the project vicinity. Shadows upon streets and sidewalks would not exceed levels commonly expected in urban areas and would be considered a less-than-significant effect under CEQA. Although occupants of nearby property may regard the increase in shadow as undesirable, the limited increase in shading of private properties as a result of the proposed project would not be considered a significant impact under CEQA.

For the above reasons, the proposed project would not result in significant project-level or cumulative impacts related to shadow that were not identified in the Eastern Neighborhoods PEIR.

</tr>
<tr>
<td>c) Physically degrade existing recreational resources?</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

The Eastern Neighborhoods PEIR concluded that implementation of the Eastern Neighborhoods Rezoning and Area Plans would not result in substantial or accelerated deterioration of existing
recreational resources or require the construction or expansion of recreational facilities that may have an adverse effect on the environment. No mitigation measures related to recreational resources were identified in the Eastern Neighborhoods PEIR.

Because the proposed project would not degrade recreational facilities and is within the development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional project-level or cumulative impacts on recreation beyond those analyzed in the Eastern Neighborhoods PEIR.

<td>☐</td>
<td>☒</td>
</tr>
<tr>
<td>g) Comply with federal, state, and local statutes and regulations related to solid waste?</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

The Eastern Neighborhoods PEIR determined that the anticipated increase in population would not result in a significant impact to the provision of water, wastewater collection and treatment, and solid waste collection and disposal. No mitigation measures were identified in the PEIR.

Because the proposed project is within the development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional project-level or cumulative impacts on utilities and service systems beyond those analyzed in the Eastern Neighborhoods PEIR.
11. PUBLIC SERVICES—Would the project:

a) Result in substantial adverse physical impacts associated with the provision of, or the need for, new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any public services such as fire protection, police protection, schools, parks, or other services?

☐ ☐ ☐ ☒

The Eastern Neighborhoods PEIR determined that the anticipated increase in population would not result in a significant impact to public services, including fire protection, police protection, and public schools. No mitigation measures were identified in the PEIR.

Because the proposed project is within the development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional project-level or cumulative impacts on public services beyond those analyzed in the Eastern Neighborhoods PEIR.

12. BIOLOGICAL RESOURCES—Would the project:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

☐ ☐ ☐ ☒

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

☐ ☐ ☐ ☒

c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

☐ ☐ ☐ ☒

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

☐ ☐ ☐ ☒
As discussed in the Eastern Neighborhoods PEIR, the Eastern Neighborhoods Plan Area is in a developed urban environment that does not provide native natural habitat for any rare or endangered plant or animal species. There are no riparian corridors, estuaries, marshes, or wetlands in the Plan Area that could be affected by the development anticipated under the Area Plan. In addition, development envisioned under the Eastern Neighborhoods Area Plan would not substantially interfere with the movement of any resident or migratory wildlife species. For these reasons, the PEIR concluded that implementation of the Area Plan would not result in significant impacts on biological resources, and no mitigation measures were identified.

The project site is located within Showplace Square/Potrero Hill Plan Area of the Eastern Neighborhoods Area Plan and therefore, does not support habitat for any candidate, sensitive or special status species. As such, implementation of the proposed project would not result in significant impacts to biological resources not identified in the Eastern Neighborhoods PEIR.

</tbody>
</table>
The Eastern Neighborhoods PEIR concluded that implementation of the Plan would indirectly increase the population that would be subject to an earthquake, including seismically induced ground-shaking, liquefaction, and landslides. The PEIR also noted that new development is generally safer than comparable older development due to improvements in building codes and construction techniques. Compliance with applicable codes and recommendations made in project-specific geotechnical analyses would not eliminate earthquake risks, but would reduce them to an acceptable level, given the seismically active characteristics of the Bay Area. Thus, the PEIR concluded that implementation of the Plan would not result in significant impacts with regard to geology, and no mitigation measures were identified in the Eastern Neighborhoods PEIR.

A geotechnical investigation was prepared for the proposed project.\(^\text{18}\) The subject site is underlain by heterogeneous fill overlying soft, weak, compressible marsh deposits, and is located within a liquefaction zone. The geotechnical report concluded that the proposed improvements may be supported on lightly loaded spread footings that extend into competent earth materials.

The project is required to conform to the San Francisco Building Code, which ensures the safety of all new construction in the City. DBI will review the project-specific geotechnical report during its review of the building permit for the project. In addition, DBI may require additional site specific soils report(s) through the building permit application process, as needed. The DBI requirement for a geotechnical report and review of the building permit application pursuant to DBI’s implementation of the Building Code would ensure that the proposed project would have no significant impacts related to soils, seismic or other geological hazards.

In light of the above, the proposed project would not result in a significant impact related to seismic and geologic hazards. Therefore, the proposed project would not result in project-level or cumulative significant impacts related to geology and soils that were not identified in the Eastern Neighborhoods PEIR, and no mitigation measures are necessary.

\(^{18}\) H. Allen Gruen, Geotechnical Engineer, Geotechnical Investigation, Planned Development at 155 De Haro Street, San Francisco, California. April 13, 2014. This document is available for review at the San Francisco Planning Department, 1650 Mission Street, Suite 400, as part of Case File No. 2013.1520E.

<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

The Eastern Neighborhoods PEIR determined that the anticipated increase in population resulting from implementation of the Plan would not result in a significant impact on hydrology and water quality, including the combined sewer system and the potential for combined sewer outflows. No mitigation measures were identified in the PEIR.

The project site is occupied by two industrial warehouse structures and is completely covered by impervious surfaces. The amount of impervious surfaces on the project site would not change with implementation of the proposed project. As a result, the proposed project would not increase stormwater runoff.
Therefore, the proposed project would not result in any significant project-level or cumulative impacts related to hydrology and water quality that were not identified in the Eastern Neighborhoods PEIR.

The Eastern Neighborhoods PEIR noted that implementation of any of the proposed project’s rezoning options would encourage construction of new development within the project area. The PEIR found that there is a high potential to encounter hazardous materials during construction activities in many parts of the project area because of the presence of 1906 earthquake fill, previous and current land uses associated with the use of hazardous materials, and known or suspected hazardous materials cleanup cases. However, the PEIR found that existing regulations for facility closure, Under Storage Tank closure, and investigation and cleanup of soil and groundwater would ensure implementation of measures to protect workers and the community from exposure to hazardous materials during construction.
Hazardous Building Materials

The Eastern Neighborhoods PEIR determined that future development in the Plan Area may involve demolition or renovation of existing structures containing hazardous building materials. Some building materials commonly used in older buildings could present a public health risk if disturbed during an accident or during demolition or renovation of an existing building. Hazardous building materials addressed in the PEIR include asbestos, electrical equipment such as transformers and fluorescent light ballasts that contain PCBs or di (2 ethylhexyl) phthalate (DEHP), fluorescent lights containing mercury vapors, and lead-based paints. Asbestos and lead based paint may also present a health risk to existing building occupants if they are in a deteriorated condition. If removed during demolition of a building, these materials would also require special disposal procedures. The Eastern Neighborhoods PEIR identified a significant impact associated with hazardous building materials including PCBs, DEHP, and mercury and determined that that Mitigation Measure L-1: Hazardous Building Materials, as outlined below, would reduce effects to a less-than-significant level. Because the proposed development includes the renovation of two existing buildings on the project site, Mitigation Measure L-1, would apply to the proposed project. See full text of Mitigation Measure L-1, as Project Mitigation Measure 2, in the Mitigation Measures Section below.

Soil and Groundwater Contamination

The proposed project is located within the Article 22A (Maher) area of the San Francisco Health Code, known as the Maher Ordinance, and according to documentation with the San Francisco Fire Department, three 2,000 gallon underground fuel tanks were installed at the subject property near the sidewalk along Carolina Street in 1952. Based on the length of time the tanks have been in place, and the absence of data confirming whether the tanks have been removed, the presence of potential hazardous materials associated with the site exists. The proposed project would involve approximately two feet of excavation below ground surface and approximately 45 cubic yards of soil disturbance. Since the project site is located in the Maher area and at one time contained on-site underground fuel tanks, the proposed project is subject to the Maher Ordinance, which is administered and overseen by the Department of Public Health (DPH).

In compliance with the Maher Ordinance, the project sponsor submitted a Maher Application to DPH along with a Phase I Environmental Site Assessment (ESA)19, a Subsurface Investigation Work Plan, a Site Mitigation Plan, and a Site Mitigation Implementation Report. Soil samples taken at the project site found the following constituents above the Regional Water Quality Control Board’s Environmental Screening Levels (ESLs) for commercial land use: copper, TPH-motor oil, TPH-diesel and zinc. Under the direction of DPH, soil was excavated and removed around the areas of elevated levels of concern. On July 8, 2014, DPH determined that no further action is required at the project site as contamination of concern were mitigated to below ESLs for commercial land use.20 Therefore, the proposed project would not result in any significant project-level or cumulative impacts related to hazardous materials that were not identified in the Eastern Neighborhoods PEIR.

For the above reasons, the proposed project would not result in significant impacts related to hazards or hazardous materials that were not identified in the Eastern Neighborhoods PEIR.

19 AEI Consultants, Phase I Environmental Site Assessment at 155 De Haro Street, San Francisco, CA, March 19, 2014.
20 Closure letter from Stephanie Cushing, Principal Environmental Health Inspector, San Francisco DPH, to Marc Rudd, July 8, 2014.
16. MINERAL AND ENERGY RESOURCES—Would the project:

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? ☐ ☐ ☐ ☒

b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan? ☐ ☐ ☐ ☒

c) Encourage activities which result in the use of large amounts of fuel, water, or energy, or use these in a wasteful manner? ☐ ☐ ☐ ☒

The Eastern Neighborhoods PEIR determined that the Area Plan would facilitate the construction of both new residential units and commercial buildings. Development of these uses would not result in use of large amounts of fuel, water, or energy in a wasteful manner or in the context of energy use throughout the City and region. The energy demand for individual buildings would be typical for such projects and would meet, or exceed, current state and local codes and standards concerning energy consumption, including Title 24 of the California Code of Regulations enforced by DBI. The Plan Area does not include any natural resources routinely extracted and the rezoning does not result in any natural resource extraction programs. Therefore, the Eastern Neighborhoods PEIR concluded that implementation of the Area Plan would not result in a significant impact on mineral and energy resources. No mitigation measures were identified in the PEIR.

Because the proposed project is within the development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional impacts on mineral and energy resources beyond those analyzed in the Eastern Neighborhoods PEIR.

17. AGRICULTURE AND FOREST RESOURCES:—Would the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? ☐ ☐ ☐ ☒

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract? ☐ ☐ ☐ ☒

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)) or timberland (as defined by Public Resources Code Section 4526)? ☐ ☐ ☐ ☒
Community Plan Exemption Checklist

<tr>
<td>e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or forest land to non-forest use?</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

The Eastern Neighborhoods PEIR determined that no agricultural resources exist in the Area Plan; therefore the rezoning and community plans would have no effect on agricultural resources. No mitigation measures were identified in the PEIR. The Eastern Neighborhoods PEIR did not analyze the effects on forest resources.

Because the proposed project is within the development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional impacts on agriculture and forest resources beyond those analyzed in the Eastern Neighborhoods PEIR.

---

**MITIGATION MEASURES**

**Archeological Resources**

*Project Mitigation Measure 1 – Properties With No Previous Studies (Eastern Neighborhoods Mitigation Measure J-2)*

This measure would apply to those properties within the project area for which no archeological assessment report has been prepared or for which the archeological documentation is incomplete or inadequate to serve as an evaluation of potential effects on archeological resources under CEQA (CEQA Guidelines § 15064.5(a)(1)(3) and (c)(1)(2)), with the exception of those properties within Archeological Mitigation Zone B as shown in Figure 29 in Chapter IV, for which Mitigation Measure J-3, below, is applicable). That is, this measure would apply to the entirety of the study area outside of Archeological Mitigation Zones A and B.

For projects proposed outside Archeological Mitigation Zones A and B, a Preliminary Archeological Sensitivity Study must be prepared by an archeological consultant with expertise in California prehistoric and urban historical archeology. The Sensitivity Study should contain the following:

1) Determine the historical uses of the project site based on any previous archeological documentation and Sanborn maps;

2) Determine types of archeological resources/properties that may have been located within the project site and whether the archeological resources/property types would potentially be eligible for listing in the CRHR;
3) Determine if 19th or 20th century soils-disturbing activities may adversely affected the identified potential archeological resources;

4) Assess potential project effects in relation to the depth of any identified potential archeological resource;

5) Conclusion: assessment of whether any CRHP-eligible archeological resources could be adversely affected by the proposed project and recommendation as to appropriate further action.

Based on the Sensitivity Study, the Environmental Review Officer (ERO) shall determine if an Archeological Research Design/Treatment Plan (ARD/TP) shall be required to more definitively identify the potential for CRHP-eligible archeological resources to be present within the project site and determine the appropriate action necessary to reduce the potential effect of the project on archeological resources to a less than significant level. The scope of the ARD/TP shall be determined in consultation with the ERO and consistent with the standards for archeological documentation established by the Office of Historic Preservation for purposes of compliance with CEQA, in Preservation Planning Bulletin No. 5).

Hazards and Hazardous Waste

*Project Mitigation Measure 2- Hazardous Building Materials (Eastern Neighborhoods Mitigation Measure L-1)*

The City shall condition further development approvals to require that the subsequent project sponsors ensure that any equipment containing PCBs or DEPH, such as fluorescent light ballasts, are removed and property disposed of according to applicable federal, state, and local laws prior to the start of renovation, and that any fluorescent light tubes, which could contain mercury, are similarly removed and properly disposed of. Any other hazardous materials identified, either before or during work, shall be abated according to applicable federal, state, and local laws.
