Community Plan Exemption Checklist

Case No.: 2014.0449E
Project Address: 1924 Mission Street
Zoning: Mission Street Neighborhood Commercial Transit Zoning District
80-X Height and Bulk District
Block/Lot: 3554/003A
Lot Size: 2,652 square feet
Plan Area: Eastern Neighborhoods Area Plan (Mission)
Project Sponsor: Gerry Ramsey, Sahu Brothers, (415) 580-1948
Staff Contact: Don Lewis – (415) 575-9168
don.lewis@sfgov.org

PROJECT DESCRIPTION

The project site is located on a rectangular-shaped lot on the west side of Mission Street between 15th and 16th Street in the Mission neighborhood. The project site is occupied by a 24-foot-tall, two-story, industrial building approximately 1,180 square feet in size. The existing building was constructed in 1941 and is currently an auto body shop. The proposed project involves the demolition of the existing building and construction of a 79-foot-tall, seven-story, mixed-use building approximately 13,060 square feet in size. The proposed building would include 12 residential units and 2,315 square feet of ground-floor commercial use. The proposed mix of units would be 3 studio units, 3 one-bedroom units, and 6 two-bedroom units. The proposed building would include 14 Class I bicycle spaces at the ground-floor level and 2 Class II bicycle parking spaces at the front of the building. No off-street parking is proposed, and the existing curb cut on Mission Street would be removed. Pedestrian and bicycle access would be from Mission Street. The proposed project would require excavation of up to approximately five feet below ground surface and 295 cubic yards of soil is proposed to be removed. As proposed, four units would have a 70-square-foot private deck and three units would have an 80-square-foot private deck. In addition, the project proposes a 740-square-foot common roof deck and a 200-square-foot common inner courtyard at the second level. The project site is located within the Mission area of the Eastern Neighborhoods Plan Area.

PROJECT APPROVAL

The proposed project at 1924 Mission Street would require the following approvals:

Actions by the Planning Department

- The proposed project at 1924 Mission Street would require Variances from the Zoning Administrator for rear yard and exposure.
Actions by other Departments

- Approval of a Site Mitigation Plan from the San Francisco Department of Public Health prior to the commencement of any excavation work;
- Approval of Building Permits from the San Francisco Department of Building Inspections for demolition and new construction; and
- Approval of shoring and foundation work within Zone-of-Influence area from the San Francisco Bay Area Rapid Transit (BART).

The approval of the Building Permit would be the Approval Action for the project. The Approval Action date establishes the start of the 30-day appeal period for this CEQA exemption determination pursuant to Section 31.04(h) of the San Francisco Administrative Code.

EVALUATION OF ENVIRONMENTAL EFFECTS

This Community Plan Exemption (CPE) Checklist evaluates whether the environmental impacts of the proposed project are addressed in the Programmatic Environmental Impact Report for the Eastern Neighborhoods Rezoning and Area Plans (Eastern Neighborhoods PEIR).\(^1\) The CPE Checklist indicates whether the proposed project would result in significant impacts that: (1) are peculiar to the project or project site; (2) were not identified as significant project-level, cumulative, or off-site effects in the PEIR; or (3) are previously identified significant effects, which as a result of substantial new information that was not known at the time that the Eastern Neighborhoods PEIR was certified, are determined to have a more severe adverse impact than discussed in the PEIR. Such impacts, if any, will be evaluated in a project-specific Mitigated Negative Declaration or Environmental Impact Report. If no such impacts are identified, the proposed project is exempt from further environmental review in accordance with Public Resources Code Section 21083.3 and CEQA Guidelines Section 15183.

Mitigation measures identified in the PEIR are discussed under each topic area, and measures that are applicable to the proposed project are provided under the Mitigation Measures Section at the end of this checklist.

The Eastern Neighborhoods PEIR identified significant impacts related to land use, transportation, cultural resources, shadow, noise, air quality, and hazardous materials. Additionally, the PEIR identified significant cumulative impacts related to land use, transportation, and cultural resources. Mitigation measures were identified for the above impacts and reduced all impacts to less-than-significant except for those related to land use (cumulative impacts on PDR use), transportation (program-level and cumulative traffic impacts at nine intersections; program-level and cumulative transit impacts on seven Muni lines), cultural resources (cumulative impacts from demolition of historical resources), and shadow (program-level impacts on parks).

The proposed project involves the demolition of the existing 1,180-square-foot industrial building and construction of an approximately 13,060-square-foot mixed-use building containing 12 residential units and 2,315 square feet of ground-floor commercial use. As discussed below in this checklist, the proposed project would not result in new, significant environmental effects, or effects of greater severity than were already analyzed and disclosed in the Eastern Neighborhoods PEIR.

AESTHETICS AND PARKING IMPACTS FOR TRANSIT PRIORITY INFILL DEVELOPMENT

Public Resources Code Section 21099(d), effective January 1, 2014, provides that, “aesthetics and parking impacts of a residential, mixed-use residential, or employment center project on an infill site located within a transit priority area shall not be considered significant impacts on the environment.” Accordingly, aesthetics and parking are no longer to be considered in determining if a project has the potential to result in significant environmental effects for projects that meet all of the following three criteria:

a) The project is in a transit priority area;

b) The project is on an infill site; and

c) The project is residential, mixed-use residential, or an employment center.

The proposed project meets each of the above three criteria and thus, this checklist does not consider aesthetics or parking in determining the significance of project impacts under CEQA. The Planning Department acknowledges that parking conditions may be of interest to the public and the decision makers. Therefore, this determination presents a parking demand analysis for informational purposes, in the Transportation and Circulation Section.

The Eastern Neighborhoods PEIR determined that adoption of the Area Plans would result in an unavoidable significant impact on land use due to the cumulative loss of PDR. The approximately 2,652-square-foot project site at 1924 Mission Street currently contains approximately 1,180 square feet of PDR space in a two-story industrial building. The proposed project would demolish all of the PDR square footage on the site in order to construct a new, mixed-use building containing 12 residential units and 2,315 square feet of ground-floor commercial use.

As a result of the Eastern Neighborhoods, the project site was rezoned from RC-4 (Residential-Commercial, High Density) to Mission Street Neighborhood Commercial Transit District (Mission Street

---

2 San Francisco Planning Department. Transit-Oriented Infill Project Eligibility Checklist for 1924 Mission Street, March 5, 2015. This document, and other cited documents, are available for review at the San Francisco Planning Department, 1650 Mission Street, Suite 400 as part of Case File No. 2014.0449E.
NCT). Since the former zoning district of RC-4 did not allow for PDR uses and the current zoning district of Mission Street NCT also does not allow for PDR uses, the potential loss of the existing on-site PDR building was not part of the calculated impacts related to loss of PDR uses in the Mission Area Plan. Therefore, the proposed project would not contribute to the significant cumulative land use impact related to the loss of PDR uses that was identified in the Eastern Neighborhoods PEIR.

Furthermore, the Citywide Planning and Current Planning Divisions of the Planning Department have determined that the proposed project is permitted in the Mission NCT District and is consistent with the bulk, density, and land uses envisioned in the Mission Area Plan. The project falls within the Mission-Valencia Corridor, which encourages transit-oriented commercial uses with housing or small offices above. The plan also encourages reduced parking in acknowledgement of the area’s good transit access. As a mixed-use commercial and residential development with no vehicle parking proposed, the proposed project is consistent with this designation.\(^3\)\(^4\)

For these reasons, implementation of the proposed project would not result in either project-level or cumulative significant impacts that were not identified in the Eastern Neighborhoods PEIR related to land use and land use planning, and no mitigation measures are necessary.

#### 2. POPULATION AND HOUSING—Would the project:

- **a)** Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?
  - ![ ]
  - ![ ]
  - ![ ]
  - ✔

- **b)** Displace substantial numbers of existing housing units or create demand for additional housing, necessitating the construction of replacement housing?
  - ![ ]
  - ![ ]
  - ![ ]
  - ✔

- **c)** Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?
  - ![ ]
  - ![ ]
  - ![ ]
  - ✔

One of the objectives of the Eastern Neighborhoods Area Plans is to identify appropriate locations for housing in the City’s industrially zoned land to meet the citywide demand for additional housing. The PEIR concluded that an increase in population in the Plan Areas is expected to occur as a secondary effect of the proposed rezoning and that any population increase would not, in itself, result in adverse physical effects, but would serve to advance key City policy objectives, such as providing housing in appropriate locations next to Downtown and other employment generators and furthering the City’s Transit First policies. It was anticipated that the rezoning would result in an increase in both housing development and population in all of the Area Plan neighborhoods. The Eastern Neighborhoods PEIR determined that

---

\(^3\) Adam Varat, San Francisco Planning Department, Community Plan Exemption Eligibility Determination, Citywide Planning and Policy Analysis, 1924 Mission, March 20, 2015.

the anticipated increase in population and density would not result in significant adverse physical effects on the environment. No mitigation measures were identified in the PEIR.

The proposed project involves the demolition of the existing 1,180-square-foot, industrial building and construction of an approximately 13,060-square-foot, mixed-use building containing 12 residential units and 2,315 square feet of ground-floor commercial use. With implementation of the proposed project, 12 new dwelling units would be added to San Francisco’s housing stock. These direct effects of the proposed project on population and housing are within the scope of the population and housing growth anticipated under the Mission Area Plan and evaluated in the Eastern Neighborhoods Plan Area PEIR.

For the above reasons, the proposed project would not result in either project-level or cumulative significant impacts on population and housing that were not identified in the Eastern Neighborhoods PEIR.

### 3. CULTURAL AND PALEONTOLOGICAL RESOURCES—Would the project:

**Historic Architectural Resources**

Pursuant to CEQA Guidelines Sections 15064.5(a)(1) and 15064.5(a)(2), historical resources are buildings or structures that are listed, or are eligible for listing, in the California Register of Historical Resources or are identified in a local register of historical resources, such as Articles 10 and 11 of the San Francisco Planning Code. The Eastern Neighborhoods PEIR determined that future development facilitated through the changes in use districts and height limits under the Eastern Neighborhoods Area Plans could have substantial adverse changes on the significance of both individual historical resources and on historical districts within the Plan Areas. The PEIR determined that approximately 32 percent of the known or potential historical resources in the Plan Areas could potentially be affected under the preferred alternative. The Eastern Neighborhoods PEIR found this impact to be significant and unavoidable. This impact was addressed in a Statement of Overriding Considerations with findings and adopted as part of the Eastern Neighborhoods Rezoning and Area Plans approval on January 19, 2009.
The PEIR identified three mitigation measures that were task to the Planning Department that could reduce the severity of impacts to historic resources as a result of development enabled under the Plan Areas (Mitigation K-1 to K-3). These mitigation measures were the responsibility of the Planning Department and do not apply to subsequent development projects. Demolition or substantial alteration of a historic resource typically cannot be fully mitigated; therefore, the PEIR concluded that the Eastern Neighborhoods Area Plan would have a significant and unavoidable impact on historic resources.

The project sponsor proposes to demolish the existing building and construct a new mixed-use building in its place. As adopted by the Historic Preservation Commission in June 2011, the 1924 Mission Street property was surveyed as part of the Inner Mission North Historic Resource Survey and was assigned a California Historic Resource Status Code (CHRSC) of “6Z,” which defines the property as “Found ineligible for NR, CR or Local designation through survey evaluation.” While the existing building retains some aspects of historic design, materials, and workmanship, noticeable alterations have occurred. In addition, the project site is not located within any other known or eligible historic district as identified in the results of the Inner Mission North Historic Resource Survey. As such, the subject property would not be considered a historic resource pursuant to CEQA and its demolition would not result in a significant impact. In addition, the project site is not located within a historic district.

Therefore, the proposed project would not contribute to the significant historic resource impact identified in the Eastern Neighborhoods PEIR, and no historic resource mitigation measures would apply to the proposed project.

For these reasons, the proposed project would not result in significant impacts on historic architectural resources that were not identified in the Eastern Neighborhoods PEIR.

**Archeological Resources**

The Eastern Neighborhoods PEIR determined that implementation of the Area Plan could result in significant impacts on archeological resources and identified three mitigation measures that would reduce these potential impacts to less than significant levels. Eastern Neighborhoods PEIR Mitigation Measure J-1 applies to properties for which a final archeological research design and treatment plan is on file at the Northwest Information Center and the Planning Department. Mitigation Measure J-2 applies to properties for which no archeological assessment report has been prepared or for which the archeological documentation is incomplete or inadequate to serve as an evaluation of potential effects on archeological resources under CEQA. Mitigation Measure J-3, which applies to properties in the Mission Dolores Archeological District, requires that a specific archeological testing program be conducted by a qualified archeological consultant with expertise in California prehistoric and urban historical archeology.

The proposed project at 1924 Mission Street would involve approximately five feet of below ground surface (bgs) excavation and approximately 295 cubic yards of soil disturbance within the Mission Dolores Archeological District. Therefore, the proposed project would be subject to Mitigation J-3 (Project Mitigation Measure 1). In accordance with Mitigation Measure J-3, a Preliminary Archaeological Review (PAR) was conducted by Planning Department staff archeologists, which determined that the proposed project has the potential to adversely affect CEQA-significant archeological resources. Therefore, in accordance with Mitigation Measure J-3, the project sponsor would be required to prepare an Archeological Testing Program to more definitively identify the potential for California Register-eligible archeological resources to be present within the project site and determine the appropriate action.

---

necessary to reduce the potential effect of the project on archeological resources to a less-than-significant level. The project sponsor has agreed to implement Eastern Neighborhoods PEIR Mitigation Measure J-3, including the requirements of the Planning Department’s third standard archeological mitigation measure, as Project Mitigation Measure 1 (full text provided in the “Mitigation Measures” section below).

For the above reasons, the proposed project would not result in significant project-level or cumulative impacts on archeological resources that were not identified in the Eastern Neighborhoods PEIR.

<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

The Eastern Neighborhoods PEIR anticipated that growth resulting from the zoning changes would not result in significant impacts related to pedestrians, bicyclists, loading, emergency access, or construction. Because the proposed project is within the development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional impacts on pedestrians, bicyclists, loading, emergency access, or construction beyond those analyzed in the Eastern Neighborhoods PEIR.

However, the Eastern Neighborhoods PEIR anticipated that growth resulting from the zoning changes could result in significant impacts on traffic and transit ridership, and identified eleven transportation mitigation measures. Even with mitigation, however, it was anticipated that the significant adverse

---

6 Randall Dean, Staff Archeologist, San Francisco Planning Department. Archeological Review Log.
cumulative traffic impacts and the cumulative impacts on transit lines could not be fully mitigated. Thus, these impacts were found to be significant and unavoidable.

The project site is not located within an airport land use plan area, or in the vicinity of a private airstrip. Therefore, the Community Plan Exemption Checklist topic 4c is not applicable.

**Trip Generation**

The proposed project involves the demolition of the existing 1,180-square-foot industrial building and construction of an approximately 13,060-square-foot mixed-use building containing 12 residential units and 2,315 square feet of ground-floor commercial use. The proposed mix of units would be 3 studio units, 3 one-bedroom units, and 6 two-bedroom units. The proposed building would include 14 Class 1 bicycle spaces at the ground-floor level and 2 Class II bicycle parking spaces at the front of the building. No off-street parking is proposed. Pedestrian and bicycle access would be from Mission Street.

Trip generation of the proposed project was calculated using information in the 2002 *Transportation Impacts Analysis Guidelines for Environmental Review* (SF Guidelines) developed by the San Francisco Planning Department. The proposed project would generate an estimated 452 person trips (inbound and outbound) on a weekday daily basis, consisting of 254 person trips by auto, 82 transit trips, 95 walk trips and 22 trips by other modes. During the p.m. peak hour, the proposed project would generate an estimated 16 vehicle trips (accounting for vehicle occupancy data for this Census Tract).

**Traffic**

The proposed project’s vehicle trips would travel through the intersections surrounding the project block. Intersection operating conditions are characterized by the concept of Level of Service (LOS), which ranges from A to F and provides a description of an intersection’s performance based on traffic volumes, intersection capacity, and vehicle delays. LOS A represents free flow conditions, with little or no delay, while LOS F represents congested conditions, with extremely long delays; LOS D (moderately high delays) is considered the lowest acceptable level in San Francisco. The intersections near the project site (within approximately 800 feet) that were analyzed in the Eastern Neighborhoods PEIR include Mission Street/16th Street, Valencia Street/16th Street, Valencia Street/15th Street, and South Van Ness Avenue/16th Street. Table 1 provides existing and cumulative LOS data gathered for these intersections, per the *Eastern Neighborhoods Rezoning and Area Plans Transportation Study.*

*Sources: Eastern Neighborhoods Rezoning and Area Plans Transportation Study (2007)*

---

7 San Francisco Planning Department, Transportation Calculations for 1924 Mission Street, March 6, 2015.

8 The *Eastern Neighborhoods Rezoning and Area Plans Transportation Study* is available for review at the San Francisco Planning Department, 1650 Mission Street, Suite 400, as part of Case File No. 2004.0160E.
The proposed project would generate an estimated 16 new p.m. peak hour vehicle trips that could travel through surrounding intersections. This amount of new p.m. peak hour vehicle trips would not substantially increase traffic volumes at these or other nearby intersections, would not substantially increase average delay that would cause intersections that currently operate at acceptable LOS to deteriorate to unacceptable LOS, or would not substantially increase average delay at intersections that currently operate at unacceptable LOS.

The proposed project would not contribute considerably to LOS delay conditions as its contribution of an estimated 16 new p.m. peak-hour vehicle trips would not be a substantial proportion of the overall traffic volume or the new vehicle trips generated by Eastern Neighborhoods’ Plan projects. The proposed project would also not contribute considerably to 2025 cumulative conditions and thus, the proposed project would not have any significant cumulative traffic impacts.

For the above reasons, the proposed project would not result in significant impacts on traffic that were not identified in the Eastern Neighborhoods PEIR.

Transit

The project site is located within a quarter mile of several local transit lines including Muni lines 14-Mission, 14L-Mission Limited, 49-Mission/Van Ness, 22-Fillmore, and 33-Stanyan, and is approximately 350 feet away from the 16th Street Mission BART Station. The proposed project would be expected to generate 82 daily transit trips, including 11 during the p.m. peak hour. Given the availability of nearby transit, the addition of 11 p.m. peak hour transit trips would be accommodated by existing capacity. As such, the proposed project would not result in unacceptable levels of transit service or cause a substantial increase in delays or operating costs such that significant adverse impacts on transit service could result.

Each of the rezoning options in the Eastern Neighborhoods PEIR identified significant and unavoidable cumulative impacts relating to increases in transit ridership on Muni lines, with the Preferred Project having significant impacts on seven lines: 9-San Bruno, 22-Fillmore, 26-Valencia9, 27-Bryant, 33-Stanyan, 48-Quintara/24th Street, 49-Mission/Van Ness. Of those lines, the project site is located within a quarter-mile of Muni lines 22-Fillmore, 33-Stanyan, and 49-Mission/Van Ness. Mitigation measures proposed to address these transit impacts related to pursuing enhanced transit funding; conducting transit corridor and service improvements; and increasing transit accessibility, service information, and storage/maintenance capabilities for Muni lines in the Eastern Neighborhoods. Implementation of the above measures is contingent upon the identification of additional funding sources, and is the responsibility of the relevant City agencies. Even with mitigation, however, cumulative impacts on the above lines were found to be significant and unavoidable, and a Statement of Overriding Considerations related to the significant and unavoidable cumulative transit impacts was adopted as part of the PEIR Certification and project approval. Additionally, since the PEIR certification, the SFMTA has continued to address transit service throughout the City, including for the Eastern Neighborhoods. In particular, with approval of the San Francisco Transportation and Road Improvement Bond – Proposition A in 2014, the Muni Forward improvements (which include projects formerly called the Transit Effectiveness Project [TEP]) will be made in the immediate project vicinity. Service improvements for the 14-Mission, 14L-Mission Limited, 22-Fillmore, 33-Stanyan, and 49-Mission/Van Ness routes have been approved and will be implemented in the next year or so. In addition, travel time reduction proposals to improve transit reliability for both the Mission and 16th streets corridors will be implemented within the next 5 years.

---

9 This line was eliminated by Muni in 2009.
The proposed project would not contribute considerably to these conditions as its minor contribution of 11 p.m. peak hour transit trips would not be a substantial proportion of the overall additional transit volume generated by Eastern Neighborhood projects. Thus, the proposed project would not contribute considerably to 2025 cumulative transit conditions and would not result in any significant cumulative transit impacts.

For the above reasons, the proposed project would not result in significant impacts that were not identified in the Eastern Neighborhoods PEIR related to transit and would not contribute considerably to cumulative transit impacts that were identified in the Eastern Neighborhoods PEIR.

**Parking**

Public Resources Code Section 21099(d), effective January 1, 2014, provides that, “aesthetics and parking impacts of a residential, mixed-use residential, or employment center project on an infill site located within a transit priority area shall not be considered significant impacts on the environment.” Accordingly, aesthetics and parking are no longer to be considered in determining if a project has the potential to result in significant environmental effects for projects that meet all of the following three criteria:

a) The project is in a transit priority area;

b) The project is on an infill site; and

c) The project is residential, mixed-use residential, or an employment center.

The proposed project meets each of the above three criteria and thus, this determination does not consider the adequacy of parking in determining the significance of project impacts under CEQA. The Planning Department acknowledges that parking conditions may be of interest to the public and the decision makers. Therefore, the following parking demand analysis is provided for informational purposes only.

The parking demand for the new residential and commercial uses associated with the proposed project was determined based on the methodology presented in the Transportation Guidelines. On an average weekday, the demand for parking would be for an estimated 30 spaces. The proposed project would not provide off-street spaces. Thus, as proposed, the project would have an unmet parking demand of an estimated 30 spaces. At this location, some of the unmet parking demand could be accommodated within existing on-street parking spaces within a reasonable distance of the project vicinity. Additionally, the project site is well served by public transit and bicycle facilities such as the 16th Street-Mission BART station, Muni transit lines 14-Mission, 14L-Mission Limited, 49-Mission/Van Ness, 22-Fillmore, and the 33-Stanyan, and bicycle routes 30 and 45. Therefore, any unmet parking demand associated with the project would not materially affect the overall parking conditions in the project vicinity such that hazardous conditions or significant delays would be created.

Further, the project site is located in the Mission Street Neighborhood Commercial Transit Use zoning district where under Section 151.1 of the Planning Code, the proposed project would not be required to provide any off-street parking spaces. It should be noted that the Planning Commission has the discretion to adjust the number of on-site parking spaces included in the proposed project, typically at the time that the project entitlements are sought. If the project were ultimately approved with no off-street parking spaces, the proposed project would have an unmet demand of an estimated 30 spaces. As mentioned

---

10 San Francisco Planning Department, Transit-Oriented Infill Project Eligibility Checklist for 1924 Mission Street, March 5, 2015.
above, the unmet parking demand could be accommodated within existing on-street parking spaces nearby and through alternative modes such as public transit and bicycle facilities. Given that the unmet demand could be met by existing facilities and given that the proposed project site is well-served by transit and bicycle facilities, a reduction in the number of off-street parking spaces associated with the proposed project, even if no off-street spaces are provided, would not result in significant delays or hazardous conditions.

Parking conditions are not static, as parking supply and demand varies from day to day, from day to night, from month to month, etc. Hence, the availability of parking spaces (or lack thereof) is not a permanent physical condition, but changes over time as people change their modes and patterns of travel. While parking conditions change over time, a substantial shortfall in parking caused by a project that creates hazardous conditions or significant delays to traffic, transit, bicycles or pedestrians could adversely affect the physical environment. Whether a shortfall in parking creates such conditions will depend on the magnitude of the shortfall and the ability of drivers to change travel patterns or switch to other travel modes. If a substantial shortfall in parking caused by a project creates hazardous conditions or significant delays in travel, such a condition could also result in secondary physical environmental impacts (e.g., air quality or noise impacts caused by congestion), depending on the project and its setting.

The absence of a ready supply of parking spaces, combined with available alternatives to auto travel (e.g., transit service, taxis, bicycles or travel by foot) and a relatively dense pattern of urban development, induces many drivers to seek and find alternative parking facilities, shift to other modes of travel, or change their overall travel habits. Any such resulting shifts to transit service or other modes (walking and biking), would be in keeping with the City’s “Transit First” policy and numerous San Francisco General Plan Polices, including those in the Transportation Element. The City’s Transit First Policy, established in the City’s Charter Article 8A, Section 8A.115, provides that “parking policies for areas well served by public transit shall be designed to encourage travel by public transportation and alternative transportation.”

The transportation analysis accounts for potential secondary effects, such as cars circling and looking for a parking space in areas of limited parking supply, by assuming that all drivers would attempt to find parking at or near the project site and then seek parking farther away if convenient parking is unavailable. The secondary effects of drivers searching for parking is typically offset by a reduction in vehicle trips due to others who are aware of constrained parking conditions in a given area, and thus choose to reach their destination by other modes (i.e. walking, biking, transit, taxi). If this occurs, any secondary environmental impacts that may result from a shortfall in parking in the vicinity of the proposed project would be minor, and the traffic assignments used in the transportation analysis, as well as in the associated air quality, noise and pedestrian safety analyses, would reasonably address potential secondary effects.
The Eastern Neighborhoods PEIR identified potential conflicts related to residences and other noise-sensitive uses in proximity to noisy uses such as PDR, retail, entertainment, cultural/institutional/educational uses, and office uses. In addition, the Eastern Neighborhoods PEIR noted that implementation of the Eastern Neighborhoods Area Plans and Rezoning would incrementally increase traffic-generated noise on some streets in the Eastern Neighborhoods plan areas and result in construction noise impacts from pile driving and other construction activities. The Eastern Neighborhoods PEIR therefore identified six noise mitigation measures that would reduce noise impacts to less-than-significant levels.

Eastern Neighborhoods PEIR Mitigation Measures F-1 and F-2 relate to construction noise. Mitigation Measure F-1 addresses individual projects that include pile-driving, and Mitigation Measure F-2 addresses individual projects that include particularly noisy construction procedures (including pile-driving). The proposed building would be supported by a deep foundation system that would include micropiles. Other heavy equipment would also be required during excavation and construction of the proposed building. As such, Mitigation Measures F-1 and F-2 are applicable to the proposed project at 1924 Mission Street. The project sponsor has agreed to implement Eastern Neighborhoods PEIR Mitigation Measures F-1 and F-2 as Project Mitigation Measures 2 and 3, respectively (full text provided in the “Mitigation Measures” section below).

In addition, all construction activities for the proposed project (approximately 12 months) would be subject to and would comply with the San Francisco Noise Ordinance (Article 29 of the San Francisco Police Code) (Noise Ordinance). Construction noise is regulated by the Noise Ordinance. The Noise

</tbody>
</table>
Ordinance requires that construction work be conducted in the following manner: (1) noise levels of construction equipment, other than impact tools, must not exceed 80 dBA at a distance of 100 feet from the source (the equipment generating the noise); (2) impact tools must have intake and exhaust mufflers that are approved by the Director of the Department of Public Works (DPW) or the Director of the Department of Building Inspection (DBI) to best accomplish maximum noise reduction; and (3) if the noise from the construction work would exceed the ambient noise levels at the site property line by 5 dBA, the work must not be conducted between 8:00 p.m. and 7:00 a.m. unless the Director of DPW authorizes a special permit for conducting the work during that period.

DBI is responsible for enforcing the Noise Ordinance for private construction projects during normal business hours (8:00 a.m. to 5:00 p.m.). The Police Department is responsible for enforcing the Noise Ordinance during all other hours. Nonetheless, during the construction period for the proposed project of approximately 12 months, occupants of the nearby properties could be disturbed by construction noise. Times may occur when noise could interfere with indoor activities in nearby residences and other businesses near the project site and may be considered an annoyance by occupants of nearby properties. The increase in noise in the project area during project construction would not be considered a significant impact of the proposed project, because the construction noise would be temporary, intermittent, and restricted in occurrence and level, as the contractor would be required to comply with the Noise Ordinance.

Eastern Neighborhoods PEIR Mitigation Measures F-3 and F-4 require that a detailed analysis of noise reduction requirements be conducted for new development that includes noise-sensitive uses located along streets with noise levels above 60 dBA (Ldn). The proposed project would add noise sensitive uses (dwelling units) in an area where street noise levels exceed 60 dBA (Ldn). Therefore, Mitigation Measures F-3 and F-4 apply to the proposed project, and have been agreed to be implemented by the project sponsor as Project Mitigation Measures 4 and 5, respectively (full text provided in the “Mitigation Measures” section below). Accordingly, the project sponsor has conducted an environmental noise study.\textsuperscript{11} The study concluded that outdoor noise levels reach 71.5 dBA (Ldn) along the street frontage of the project site. To meet the 45 dBA interior noise level, the noise study provided the following recommendations: the 2\textsuperscript{nd} and 3\textsuperscript{rd} floor windows facing Mission Street should have an Outside-Inside Transmission Class (OTIC) rating of 33; the 4\textsuperscript{th} and 5\textsuperscript{th} floor windows facing Mission Street should have an OTIC rating of 35; the 6\textsuperscript{th} and 7\textsuperscript{th} floor windows facing Mission Street should have an OTIC rating of 37; and the rear windows (east façade) should have an OTIC rating of 30 for the 3\textsuperscript{rd} floor and a rating of 28 OTIC for the 4\textsuperscript{th} through 7\textsuperscript{th} floor windows. The noise study demonstrated that the proposed project can feasibly attain an acceptable interior noise level of 45 dBA in all dwelling units.

Eastern Neighborhoods PEIR Mitigation Measure F-5 addresses impacts related to individual projects that include new noise-generating uses that would be expected to generate noise levels in excess of ambient noise in the proposed project site vicinity. The proposed mixed-use project would introduce new noise sensitive uses, but is not expected to generate excessive noise levels. In addition, any noise generated by the project including mechanical equipment would be subject to noise control requirements pursuant to the Noise Ordinance. Thus, Mitigation Measure F-5 is not applicable.

Mitigation Measure F-6 addresses impacts from existing ambient noise levels on open space required under the Planning Code for new development that includes noise sensitive uses. The proposed project includes a 740-square-foot common roof deck and a 200-square-foot common inner courtyard at the

second level. Mitigation Measure F-6 is therefore applicable to the proposed project, and has been agreed to by the project sponsor as Project Mitigation Measure 4 (full text provided in the “Mitigation Measures” section below). The noise study prepared in accordance with Mitigation Measure F-4 (Project Mitigation Measure 3) addressed noise levels at the proposed outdoor spaces, and concluded that due to distance to the primary noise source (Mission Street) and the shielding effect from the building itself, ambient noise levels on the rooftop and at the inner court would be below 65 dBA (Ldn) and would not limit the enjoyment of the open space.\(^{12}\)

The project site is not located within an airport land use plan area, within two miles of a public airport, or in the vicinity of a private airstrip. Therefore, topic 12e and f from the CEQA Guidelines, Appendix G is not applicable.

For the above reasons, the proposed project would not result in significant project-level or cumulative noise impacts that were not identified in the Eastern Neighborhoods PEIR.

</tbody>
</table>

The Eastern Neighborhoods PEIR identified potentially significant air quality impacts resulting from construction activities and impacts to sensitive land uses\(^{13}\) as a result of exposure to elevated levels of diesel particulate matter (DPM) and other toxic air contaminants (TACs). The Eastern Neighborhoods PEIR identified four mitigation measures that would reduce these air quality impacts to less-than-significant levels. All other air quality impacts were found to be less than significant.

---

\(^{12}\) Ibid.

\(^{13}\) The Bay Area Air Quality Management District (BAAQMD) considers sensitive receptors as: children, adults or seniors occupying or residing in: 1) residential dwellings, including apartments, houses, condominiums, 2) schools, colleges, and universities, 3) daycares, 4) hospitals, and 5) senior care facilities. BAAQMD, Recommended Methods for Screening and Modeling Local Risks and Hazards, May 2011, page 12.
Construction Dust Control

Eastern Neighborhoods PEIR Mitigation Measure G-1 Construction Air Quality requires individual projects involving construction activities to include dust control measures and to maintain and operate construction equipment so as to minimize exhaust emissions of particulates and other pollutants. The San Francisco Board of Supervisors subsequently approved a series of amendments to the San Francisco Building and Health Codes, generally referred to as the Construction Dust Control Ordinance (Ordinance 176-08, effective July 30, 2008). The intent of the Construction Dust Control Ordinance is to reduce the quantity of fugitive dust generated during site preparation, demolition, and construction work in order to protect the health of the general public and of on-site workers, minimize public nuisance complaints, and to avoid orders to stop work by DBI. Project-related construction activities would result in construction dust, primarily from ground-disturbing activities. In compliance with the Construction Dust Control Ordinance, the project sponsor and contractor responsible for construction activities at the project site would be required to control construction dust on the site through a combination of watering disturbed areas, covering stockpiled materials, street and sidewalk sweeping and other measures.

The regulations and procedures set forth by the San Francisco Dust Control Ordinance would ensure that construction dust impacts would not be significant. These requirements supersede the dust control provisions of PEIR Mitigation Measure G-1. Therefore, the portion of PEIR Mitigation Measure G-1 Construction Air Quality that addresses dust control is not applicable to the proposed project.

Health Risk

Eastern Neighborhoods PEIR Mitigation Measure G-1 addresses air quality impacts during construction, PEIR Mitigation Measure G-2 addresses the siting of sensitive land uses near sources of TACs and PEIR Mitigation Measures G-3 and G-4 address proposed uses that would emit DPM and other TACs.

Subsequent to certification of the PEIR, San Francisco (in partnership with the Bay Area Air Quality Management District (BAAQMD)) inventoried and assessed air pollution and exposures from mobile, stationary, and area sources within San Francisco and identified portions of the City that result in additional health risks for affected populations (“Air Pollutant Exposure Zone”). The Air Pollutant Exposure Zone was identified based on two health based criteria:

1. Areas where the excess cancer risk from all sources is greater than 100; or
2. Areas where PM$_{2.5}$ concentrations from all sources (including ambient concentrations) are greater than 10µg/m$^3$.

The project site is not located within an identified Air Pollutant Exposure Zone. Therefore, the ambient health risk to sensitive receptors from air pollutants is not considered substantial and the remainder of Mitigation Measure G-1 that requires the minimization of construction exhaust emissions is not applicable to the proposed project.

The proposed project would include the development of residential uses, which is considered a sensitive land use for purposes of air quality evaluation. As discussed above, the ambient health risk to sensitive receptors from air pollutants is not considered substantial and Eastern Neighborhoods PEIR Mitigation Measure G-2 Air Quality for Sensitive Land Uses is not applicable to the proposed project. Furthermore, the proposed residential and commercial land uses are not uses that would emit substantial levels of DPM or other TACs and Eastern Neighborhoods Mitigation Measures G-3 and G-4 are similarly not applicable.
For the above reasons, none of the Eastern Neighborhoods PEIR air quality mitigation measures are applicable to the proposed project and the project would not result in significant air quality impacts (including cumulative impacts) that were not identified in the PEIR.

<tr>
<td>7. GREENHOUSE GAS EMISSIONS—Would the project:</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
<tr>
<td>a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
<tr>
<td>b) Conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

The Eastern Neighborhoods PEIR assessed the GHG emissions that could result from rezoning of the Mission Area Plan under the three rezoning options. The Eastern Neighborhoods Rezoning Options A, B, and C are anticipated to result in GHG emissions on the order of 4.2, 4.3 and 4.5 metric tons of CO2E\(^{14}\) per service population,\(^{15}\) respectively. The Eastern Neighborhoods PEIR concluded that the resulting GHG emissions from the three options analyzed in the Eastern Neighborhoods Area Plans would be less than significant. No mitigation measures were identified in the PEIR.

Regulations outlined in San Francisco’s Strategies to Address Greenhouse Gas Emissions have proven effective as San Francisco’s GHG emissions have measurably reduced when compared to 1990 emissions levels, demonstrating that the City has met and exceeded EO S-3-05, AB 32, and the Bay Area 2010 Clean Air Plan GHG reduction goals for the year 2020. The proposed project was determined to be consistent with San Francisco’s GHG Reduction Strategy.\(^{16}\) Other existing regulations, such as those implemented through AB 32, will continue to reduce a proposed project’s contribution to climate change. Therefore, the proposed project’s GHG emissions would not conflict with state, regional, and local GHG reduction plans and regulations, and thus the proposed project’s contribution to GHG emissions would not be cumulatively considerable or generate GHG emissions, either directly or indirectly, that would have a significant impact on the environment.

Because the proposed project is within the development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional impacts on greenhouse gas emissions (including cumulative impacts) beyond those analyzed in the Eastern Neighborhoods PEIR.

\(^{14}\) CO2E, defined as equivalent Carbon Dioxide, is a quantity that describes other greenhouse gases in terms of the amount of Carbon Dioxide that would have an equal global warming potential.  
\(^{15}\) Memorandum from Jessica Range to Environmental Planning staff, Greenhouse Gas Analyses for Community Plan Exemptions in Eastern Neighborhoods, April 20, 2010. This memorandum provides an overview of the GHG analysis conducted for the Eastern Neighborhoods PEIR and provides an analysis of the emissions using a service population (equivalent of total number of residents and employees) metric.  
8. **WIND AND SHADOW—Would the project:**

   a) Alter wind in a manner that substantially affects public areas? ☐ ☐ ☐ ☒

   b) Create new shadow in a manner that substantially affects outdoor recreation facilities or other public areas? ☐ ☐ ☐ ☒

**Wind**

Based upon experience of the Planning Department in reviewing wind analyses and expert opinion on other projects, it is generally (but not always) the case that projects under 80 feet in height do not have the potential to generate significant wind impacts. The proposed 79-foot-tall building (up to 85 feet including the elevator penthouse) would be three stories taller than both of the immediately adjacent four-story buildings to the north and south, and would be similar in height to existing and proposed buildings in the surrounding area. Given the size and location of the proposed project, it is unlikely that the proposed project would alter wind in a manner that would substantially affect public areas. For the above reasons, the proposed project is not anticipated to cause significant project-level or cumulative impacts related to wind that were not identified in the Eastern Neighborhoods PEIR.

**Shadow**

Planning Code Section 295 generally prohibits new structures above 40 feet in height that would cast additional shadows on open space that is under the jurisdiction of the San Francisco Recreation and Park Commission between one hour after sunrise and one hour before sunset, at any time of the year, unless that shadow would not result in a significant adverse effect on the use of the open space. Under the Eastern Neighborhoods Rezoning and Area Plans, sites surrounding parks could be redeveloped with taller buildings without triggering Section 295 of the Planning Code because certain parks are not subject to Section 295 of the Planning Code (i.e., under jurisdiction of departments other than the Recreation and Parks Department or privately owned). The Eastern Neighborhoods PEIR could not conclude that the rezoning and community plans would result in less-than-significant shadow impacts because the feasibility of complete mitigation for potential new shadow impacts of unknown proposed proposals could not be determined at that time. Therefore, the PEIR determined shadow impacts to be significant and unavoidable. No mitigation measures were identified in the PEIR.

The proposed project would construct an approximately 79-foot-tall building (up to 85 feet including the elevator penthouse). Therefore, the Planning Department prepared a preliminary shadow fan analysis to determine whether the proposed project would have the potential to cast new shadow on nearby parks. The shadow fan analysis prepared by the Department found the project as proposed would not cast shadows on Recreation and Parks Department parks or other public parks.19

---

17 The existing building at 1600 15th Street is six stories tall and the existing building at 1905 Mission Street is five stories tall.
18 Proposed projects on the subject block include the six-story building at 1900 Mission Street and the ten-story building at 1979 Mission Street.
19 San Francisco Planning Department, Shadow Analysis, 1924 Mission Street, April 30, 2014.
The proposed project would shade portions of nearby streets and sidewalks and private property at times within the project vicinity. Shadows upon streets and sidewalks would not exceed levels commonly expected in urban areas and would be considered a less-than-significant effect under CEQA. Although occupants of nearby property may regard the increase in shadow as undesirable, the limited increase in shading of private properties as a result of the proposed project would not be considered a significant impact under CEQA.

For the above reasons, the proposed project would not result in significant project-level and cumulative impacts related to shadow that were not identified in the Eastern Neighborhoods PEIR.

<td>9. RECREATION—Would the project:</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated?</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
<tr>
<td>b) Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
<tr>
<td>c) Physically degrade existing recreational resources?</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

The Eastern Neighborhoods PEIR concluded that implementation of the Eastern Neighborhoods Rezoning and Area Plans would not result in substantial or accelerated deterioration of existing recreational resources or require the construction or expansion of recreational facilities that may have an adverse effect on the environment. No mitigation measures related to recreational resources were identified in the Eastern Neighborhoods PEIR.

Because the proposed project would not degrade recreational facilities and is within the development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional project-level or cumulative impacts on recreation beyond those analyzed in the Eastern Neighborhoods PEIR.

<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

As discussed in the Eastern Neighborhoods PEIR, the Eastern Neighborhoods Plan Area is in a developed urban environment that does not provide native natural habitat for any rare or endangered plant or animal species. There are no riparian corridors, estuaries, marshes, or wetlands in the Plan Area that could be affected by the development anticipated under the Area Plan. In addition, development envisioned under the Eastern Neighborhoods Area Plan would not substantially interfere with the movement of any resident or migratory wildlife species. For these reasons, the PEIR concluded that implementation of the Area Plan would not result in significant impacts on biological resources, and no mitigation measures were identified.
Because the proposed project is within the development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional project-level or cumulative impacts on biological resources beyond those analyzed in the Eastern Neighborhoods PEIR.

<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

The Eastern Neighborhoods PEIR concluded that implementation of the Plan would indirectly increase the population that would be subject to an earthquake, including seismically induced ground-shaking, liquefaction, and landslides. The PEIR also noted that new development is generally safer than comparable older development due to improvements in building codes and construction techniques. Compliance with applicable codes and recommendations made in project-specific geotechnical analyses would not eliminate earthquake risks, but would reduce them to an acceptable level, given the seismically active characteristics of the Bay Area. Thus, the PEIR concluded that implementation of the Plan would not result in significant impacts with regard to geology, and no mitigation measures were identified in the Eastern Neighborhoods PEIR.
A geotechnical investigation was prepared for the proposed project.\(^{20}\) The investigation concluded that the project vicinity is underlain by fill and native sand with varying amounts of clay and silt, and the proposed building would require a deep foundation system. The project is required to conform to the San Francisco Building Code, which ensures the safety of all new construction in the City. DBI will review the project-specific geotechnical report during its review of the building permit for the project. In addition, DBI may require additional site specific soils report(s) through the building permit application process, as needed. The DBI requirement for a geotechnical report and review of the building permit application pursuant to DBI’s implementation of the Building Code would ensure that the proposed project would have no significant impacts related to soils, seismic or other geological hazards.

In light of the above, the proposed project would not result in a significant impact related to seismic and geologic hazards and would not result in significant project-level or cumulative impacts related to geology and soils that were not identified in the Eastern Neighborhoods PEIR. No mitigation measures are necessary.

</tr>
</tbody>
</table>

The Eastern Neighborhoods PEIR determined that the anticipated increase in population would not result in a significant impact on hydrology and water quality, including the combined sewer system and the potential for combined sewer outflows. No mitigation measures were identified in the PEIR.

The amount of impervious surface coverage on the site would not change with implementation of the proposed project. As a result, the proposed project would not increase stormwater runoff beyond what was studied in the Eastern Neighborhoods PEIR.

Therefore, the proposed project would not result in any significant project-level or cumulative impacts related to hydrology and water quality that were not identified in the Eastern Neighborhoods PEIR.
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area? ☒ ☐ ☐ ☐
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area? ☐ ☐ ☐ ☒
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? ☐ ☐ ☐ ☒
h) Expose people or structures to a significant risk of loss, injury, or death involving fires? ☐ ☐ ☐ ☒

The Eastern Neighborhoods PEIR noted that implementation of any of the proposed project’s rezoning options would encourage construction of new development within the project area. The PEIR found that there is a high potential to encounter hazardous materials during construction activities in many parts of the project area because of the presence of 1906 earthquake fill, previous and current land uses associated with the use of hazardous materials, and known or suspected hazardous materials cleanup cases. However, the PEIR found that existing regulations for facility closure, Under Storage Tank (UST) closure, and investigation and cleanup of soil and groundwater would ensure implementation of measures to protect workers and the community from exposure to hazardous materials during construction.

Hazardous Building Materials

The Eastern Neighborhoods PEIR determined that future development in the Plan Area may involve demolition or renovation of existing structures containing hazardous building materials. Some building materials commonly used in older buildings could present a public health risk if disturbed during an accident or during demolition or renovation of an existing building. Hazardous building materials addressed in the PEIR include asbestos, electrical equipment such as transformers and fluorescent light ballasts that contain PCBs or di (2 ethylhexyl) phthalate (DEHP), fluorescent lights containing mercury vapors, and lead-based paints. Asbestos and lead based paint may also present a health risk to existing building occupants if they are in a deteriorated condition. If removed during demolition of a building, these materials would also require special disposal procedures. The Eastern Neighborhoods PEIR identified a significant impact associated with hazardous building materials including PCBs, DEHP, and mercury and determined that that Mitigation Measure L-1: Hazardous Building Materials, as outlined below, would reduce impacts to less-than-significant levels. Because the proposed development includes demolition of the existing 1,180-square-foot, industrial building on the project site, Mitigation Measure L-1 would apply to the proposed project. See full text of Mitigation Measure L-1, as Project Mitigation Measure 7, in the Mitigation Measures Section below.

Soil and Groundwater Contamination

The proposed project is located within the Article 22A (Maher) area of the San Francisco Health Code, known as the Maher Ordinance, and would involve excavation of up to approximately five feet below ground surface and 295 cubic yards of soil is proposed to be removed. Therefore, the proposed project is
subject to the Maher Ordinance, which is administered and overseen by the Department of Public Health (DPH). The Maher Ordinance requires the project sponsor to retain the services of a qualified professional to prepare a Phase I Environmental Site Assessment (ESA) that meets the requirements of Health Code Section 22.A.6.

The Phase I would determine the potential for site contamination and level of exposure risk associated with the project. Based on that information, the project sponsor may be required to conduct soil and/or groundwater sampling and analysis. Where such analysis reveals the presence of hazardous substances in excess of state or federal standards, the project sponsor is required to submit a site mitigation plan (SMP) to the DPH or other appropriate state or federal agency(ies), and to remediate any site contamination in accordance with an approved SMP prior to the issuance of any building permit.

In compliance with the Maher Ordinance, the project sponsor submitted a Maher Application and a Phase I ESA\(^2\) to DPH\(^2\). The Phase I ESA stated that the property was developed with a store (circa 1887), a portion of a residential flats building (circa 1899), and then consisted of vacant land (circa 1913-1935). Since the construction of the current building in 1941, the subject property has been occupied by a residence and/or storage building (circa 1941-1980), and automotive body shops (circa 1985–present). The Phase I ESA found no on-site Recognized or Historical Recognized Environmental Conditions. Spray painting associated with the current and former small-scale automotive body shop is/was conducted in the eastern portion of the shop building. Minor paint staining was observed on the shop area concrete floor; however, no evidence of a release was observed during the site reconnaissance. Since the project site is located in the Maher area, has been used for industrial occupancy, and the proposed project would require more than 50 cubic yards of soil disturbance, the proposed project is subject to the Maher Ordinance, which is administered and overseen by the Department of Public Health. Therefore, the proposed project would not result in any significant impacts related to hazardous materials that were not identified in the Eastern Neighborhoods PEIR.

For the above reasons, the proposed project would not result in significant project-level or cumulative impacts related to hazards or hazardous materials that were not identified in the Eastern Neighborhoods PEIR.

### 16. MINERAL AND ENERGY RESOURCES—Would the project:

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?  

  ☐  ☐  ☐  ☒

b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

  ☐  ☐  ☐  ☒

c) Encourage activities which result in the use of large amounts of fuel, water, or energy, or use these in a wasteful manner?

  ☐  ☐  ☐  ☒

---

\(^2\) Russell Yim, SFDPH, email to Don Lewis, 1924 Mission Street, March 13, 2015.
The Eastern Neighborhoods PEIR determined that the Area Plan would facilitate the construction of both new residential units and commercial buildings. Development of these uses would not result in use of large amounts of fuel, water, or energy in a wasteful manner or in the context of energy use throughout the City and region. The energy demand for individual buildings would be typical for such projects and would meet, or exceed, current state and local codes and standards concerning energy consumption, including Title 24 of the California Code of Regulations enforced by DBI. The Plan Area does not include any natural resources routinely extracted and the rezoning does not result in any natural resource extraction programs. Therefore, the Eastern Neighborhoods PEIR concluded that implementation of the Area Plan would not result in a significant impact on mineral and energy resources. No mitigation measures were identified in the PEIR.

Because the proposed project is within the development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional impacts on mineral and energy resources beyond those analyzed in the Eastern Neighborhoods PEIR.

17. AGRICULTURE AND FOREST RESOURCES:— Would the project:

- a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? ☐ ☐ ☐ ☒
- b) Conflict with existing zoning for agricultural use, or a Williamson Act contract? ☐ ☐ ☐ ☒
- c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)) or timberland (as defined by Public Resources Code Section 4526)? ☐ ☐ ☐ ☒
- d) Result in the loss of forest land or conversion of forest land to non-forest use? ☐ ☐ ☐ ☒
- e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or forest land to non-forest use? ☐ ☐ ☐ ☒

The Eastern Neighborhoods PEIR determined that no agricultural resources exist in the Area Plan; therefore the rezoning and community plans would have no effect on agricultural resources. No mitigation measures were identified in the PEIR. The Eastern Neighborhoods PEIR did not analyze the effects on forest resources.
Because the proposed project is within the development projected under the Eastern Neighborhoods Rezoning and Area Plans, there would be no additional impacts on agriculture and forest resources beyond those analyzed in the Eastern Neighborhoods PEIR.

MITIGATION MEASURES

Archeological Resources

Project Mitigation Measure 1 – Archeological Testing within the Mission Dolores Archeological District (Eastern Neighborhoods Mitigation Measure J-3)

Based on a reasonable presumption that archeological resources may be present within the project site, the following measures shall be undertaken to avoid any potentially significant adverse effect from the proposed project on buried or submerged historical resources. The project sponsor shall retain the services of an archeological consultant from the rotational Department Qualified Archaeological Consultants List (QACL) maintained by the Planning Department archaeologist. The project sponsor shall contact the Department archeologist to obtain the names and contact information for the next three archeological consultants on the QACL. The archeological consultant shall undertake an archeological testing program as specified herein. In addition, the consultant shall be available to conduct an archeological monitoring and/or data recovery program if required pursuant to this measure. The archeological consultant’s work shall be conducted in accordance with this measure at the direction of the Environmental Review Officer (ERO). All plans and reports prepared by the consultant as specified herein shall be submitted first and directly to the ERO for review and comment, and shall be considered draft reports subject to revision until final approval by the ERO. Archeological monitoring and/or data recovery programs required by this measure could suspend construction of the project for up to a maximum of four weeks. At the direction of the ERO, the suspension of construction can be extended beyond four weeks only if such a suspension is the only feasible means to reduce to a less than significant level potential effects on a significant archeological resource as defined in CEQA Guidelines Sect. 15064.5 (a) and (c).

Consultation with Descendant Communities: On discovery of an archeological site23 associated with descendant Native Americans, the Overseas Chinese, or other potentially interested descendant group an appropriate representative24 of the descendant group and the ERO shall be contacted. The representative of the descendant group shall be given the opportunity to monitor archeological field investigations of the site and to offer recommendations to the ERO regarding appropriate archeological treatment of the site, of recovered data from the site, and, if applicable, any interpretative treatment of the associated archeological site. A copy of the Final Archaeological Resources Report shall be provided to the representative of the descendant group.

---

23 By the term “archeological site” is intended here to minimally include any archeological deposit, feature, burial, or evidence of burial.

24 An “appropriate representative” of the descendant group is here defined to mean, in the case of Native Americans, any individual listed in the current Native American Contact List for the City and County of San Francisco maintained by the California Native American Heritage Commission and in the case of the Overseas Chinese, the Chinese Historical Society of America. An appropriate representative of other descendant groups should be determined in consultation with the Department archeologist.
Archeological Testing Program. The archeological consultant shall prepare and submit to the ERO for review and approval an archeological testing plan (ATP). The archeological testing program shall be conducted in accordance with the approved ATP. The ATP shall identify the property types of the expected archeological resource(s) that potentially could be adversely affected by the proposed project, the testing method to be used, and the locations recommended for testing. The purpose of the archeological testing program will be to determine to the extent possible the presence or absence of archeological resources and to identify and to evaluate whether any archeological resource encountered on the site constitutes an historical resource under CEQA.

At the completion of the archeological testing program, the archeological consultant shall submit a written report of the findings to the ERO. If based on the archeological testing program the archeological consultant finds that significant archeological resources may be present, the ERO in consultation with the archeological consultant shall determine if additional measures are warranted. Additional measures that may be undertaken include additional archeological testing, archeological monitoring, and/or an archeological data recovery program. No archeological data recovery shall be undertaken without the prior approval of the ERO or the Planning Department archeologist. If the ERO determines that a significant archeological resource is present and that the resource could be adversely affected by the proposed project, at the discretion of the project sponsor either:

A) The proposed project shall be re-designed so as to avoid any adverse effect on the significant archeological resource; or

B) A data recovery program shall be implemented, unless the ERO determines that the archeological resource is of greater interpretive than research significance and that interpretive use of the resource is feasible.

Archeological Monitoring Program. If the ERO in consultation with the archeological consultant determines that an archeological monitoring program shall be implemented the archeological monitoring program shall minimally include the following provisions:

- The archeological consultant, project sponsor, and ERO shall meet and consult on the scope of the AMP reasonably prior to any project-related soils disturbing activities commencing. The ERO in consultation with the archeological consultant shall determine what project activities shall be archeologically monitored. In most cases, any soils-disturbing activities, such as demolition, foundation removal, excavation, grading, utilities installation, foundation work, driving of piles (foundation, shoring, etc.), site remediation, etc., shall require archeological monitoring because of the risk these activities pose to potential archaeological resources and to their depositional context;

- The archeological consultant shall advise all project contractors to be on the alert for evidence of the presence of the expected resource(s), of how to identify the evidence of the expected resource(s), and of the appropriate protocol in the event of apparent discovery of an archeological resource;

- The archeological monitor(s) shall be present on the project site according to a schedule agreed upon by the archeological consultant and the ERO until the ERO has, in consultation with project archeological consultant, determined that project construction activities could have no effects on significant archeological deposits;

- The archeological monitor shall record and be authorized to collect soil samples and artifactual/ecofactual material as warranted for analysis;

- If an intact archeological deposit is encountered, all soils-disturbing activities in the vicinity of the deposit shall cease. The archeological monitor shall be empowered to temporarily
redirect demolition/excavation/pile driving/construction activities and equipment until the
deposit is evaluated. If in the case of pile driving activity (foundation, shoring, etc.), the
archeological monitor has cause to believe that the pile driving activity may affect an
archeological resource, the pile driving activity shall be terminated until an appropriate
evaluation of the resource has been made in consultation with the ERO. The archeological
consultant shall immediately notify the ERO of the encountered archeological deposit. The
archeological consultant shall make a reasonable effort to assess the identity, integrity, and
significance of the encountered archeological deposit, and present the findings of this
assessment to the ERO.

Whether or not significant archeological resources are encountered, the archeological consultant shall
submit a written report of the findings of the monitoring program to the ERO.

*Archeological Data Recovery Program.* The archeological data recovery program shall be conducted in accord
with an archeological data recovery plan (ADRP). The archeological consultant, project sponsor, and ERO
shall meet and consult on the scope of the ADRP prior to preparation of a draft ADRP. The archeological
consultant shall submit a draft ADRP to the ERO. The ADRP shall identify how the proposed data
recovery program will preserve the significant information the archeological resource is expected to
contain. That is, the ADRP will identify what scientific/historical research questions are applicable to the
expected resource, what data classes the resource is expected to possess, and how the expected data
classes would address the applicable research questions. Data recovery, in general, should be limited to
the portions of the historical property that could be adversely affected by the proposed project. Destructive data recovery methods shall not be applied to portions of the archeological resources if
nondestructive methods are practical.

The scope of the ADRP shall include the following elements:

- **Field Methods and Procedures.** Descriptions of proposed field strategies, procedures, and
  operations.
- **Cataloguing and Laboratory Analysis.** Description of selected cataloguing system and artifact
  analysis procedures.
- **Discard and Deaccession Policy.** Description of and rationale for field and post-field discard
  and deaccession policies.
- **Interpretive Program.** Consideration of an on-site/off-site public interpretive program during
  the course of the archeological data recovery program.
- **Security Measures.** Recommended security measures to protect the archeological resource
  from vandalism, looting, and non-intentionally damaging activities.
- **Final Report.** Description of proposed report format and distribution of results.
- **Curation.** Description of the procedures and recommendations for the curation of any
  recovered data having potential research value, identification of appropriate curation
  facilities, and a summary of the accession policies of the curation facilities.

*Human Remains and Associated or Unassociated Funerary Objects.* The treatment of human remains and of
associated or unassociated funerary objects discovered during any soils disturbing activity shall comply
with applicable State and Federal laws. This shall include immediate notification of the Coroner of the City
and County of San Francisco and in the event of the Coroner’s determination that the human remains are
Native American remains, notification of the California State Native American Heritage Commission
(NAHC) who shall appoint a Most Likely Descendant (MLD) (Pub. Res. Code Sec. 5097.98). The archeological consultant, project sponsor, ERO, and MLD shall have up to but not beyond six days of discovery make all reasonable efforts to develop an agreement for the treatment of human remains and associated or unassociated funerary objects with appropriate dignity (CEQA Guidelines. Sec. 15064.5(d)). The agreement should take into consideration the appropriate excavation, removal, recordation, analysis, custodianship, curation, and final disposition of the human remains and associated or unassociated funerary objects. Nothing in existing State regulations or in this mitigation measure compels the project sponsor and the ERO to accept recommendations of an MLD. The archeological consultant shall retain possession of any Native American human remains and associated or unassociated burial objects until completion of any scientific analyses of the human remains or objects as specified in the treatment agreement if such as agreement has been made or, otherwise, as determined by the archeological consultant and the ERO.

*Final Archeological Resources Report.* The archeological consultant shall submit a Draft Final Archeological Resources Report (FARR) to the ERO that evaluates the historical significance of any discovered archeological resource and describes the archeological and historical research methods employed in the archeological testing/monitoring/data recovery program(s) undertaken. Information that may put at risk any archeological resource shall be provided in a separate removable insert within the final report.

Once approved by the ERO, copies of the FARR shall be distributed as follows: California Archaeological Site Survey Northwest Information Center (NWIC) shall receive one (1) copy and the ERO shall receive a copy of the transmittal of the FARR to the NWIC. The Environmental Planning division of the Planning Department shall receive one bound, one unbound and one unlocked, searchable PDF copy on CD of the FARR along with copies of any formal site recordation forms (CA DPR 523 series) and/or documentation for nomination to the National Register of Historic Places/California Register of Historical Resources. In instances of high public interest in or the high interpretive value of the resource, the ERO may require a different final report content, format, and distribution than that presented above.

**Noise**

*Project Mitigation Measure 2 – Construction Noise (Eastern Neighborhoods Mitigation Measure F-1)*

For subsequent development projects within proximity to noise-sensitive uses that would include pile-driving, individual project sponsors shall ensure that piles be pre-drilled wherever feasible to reduce construction-related noise and vibration. No impact pile drivers shall be used unless absolutely necessary. Contractors would be required to use pile-driving equipment with state-of-the-art noise shielding and muffling devices. To reduce noise and vibration impacts, sonic or vibratory sheetpile drivers, rather than impact drivers, shall be used wherever sheetpiles are needed. Individual project sponsors shall also require that contractors schedule pile-driving activity for times of the day that would minimize disturbance to neighbors.

*Project Mitigation Measure 3 – Construction Noise (Eastern Neighborhoods Mitigation Measure F-2)*

Where environmental review of a development project undertaken subsequent to the adoption of the proposed zoning controls determines that construction noise controls are necessary due to the nature of planned construction practices and the sensitivity of proximate uses, the Planning
Director shall require that the sponsors of the subsequent development project develop a set of site-specific noise attenuation measures under the supervision of a qualified acoustical consultant. Prior to commencing construction, a plan for such measures shall be submitted to the Department of Building Inspection to ensure that maximum feasible noise attenuation will be achieved. These attenuation measures shall include as many of the following control strategies as feasible:

- Erect temporary plywood noise barriers around a construction site, particularly where a site adjoins noise-sensitive uses;

- Utilize noise control blankets on a building structure as the building is erected to reduce noise emission from the site;

- Evaluate the feasibility of noise control at the receivers by temporarily improving the noise reduction capability of adjacent buildings housing sensitive uses;

- Monitor the effectiveness of noise attenuation measures by taking noise measurements;

- Post signs on-site pertaining to permitted construction days and hours and complaint procedures and who to notify in the event of a problem, with telephone numbers listed.

**Project Mitigation Measure 4 – Interior Noise Levels (Eastern Neighborhoods Mitigation Measure F-3)**

For new development including noise-sensitive uses located along streets with noise levels above 60 dBA (Ldn), as shown in EIR Figure 18, where such development is not already subject to the California Noise Insulation Standards in Title 24 of the California Code of Regulations, the project sponsor shall conduct a detailed analysis of noise reduction requirements. Such analysis shall be conducted by person(s) qualified in acoustical analysis and/or engineering. Noise insulation features identified and recommended by the analysis shall be included in the design, as specified in the San Francisco General Plan Land Use Compatibility Guidelines for Community Noise to reduce potential interior noise levels to the maximum extent feasible.

**Project Mitigation Measure 5 – Siting of Noise-Sensitive Uses (Eastern Neighborhoods Mitigation Measure F-4)**

To reduce potential conflicts between existing noise-generating uses and new sensitive receptors, for new development including noise-sensitive uses, the Planning Department shall require the preparation of an analysis that includes, at a minimum, a site survey to identify potential noise-generating uses within 900 feet of, and that have a direct line-of-sight to, the project site, and including at least one 24-hour noise measurement (with maximum noise level readings taken at least every 15 minutes), prior to the first project approval action. The analysis shall be prepared by persons qualified in acoustical analysis and/or engineering and shall demonstrate with reasonable certainty that Title 24 standards, where applicable, can be met, and that there are no particular circumstances about the proposed project site that appear to warrant heightened concern about noise.
levels in the vicinity. Should such concerns be present, the Department may require the completion of a detailed noise assessment by person(s) qualified in acoustical analysis and/or engineering prior to the first project approval action, in order to demonstrate that acceptable interior noise levels consistent with those in the Title 24 standards can be attained.

**Project Mitigation Measure 6 – Open Space in Noisy Environments (Eastern Neighborhoods Mitigation Measure F-6)**

To minimize effects on development in noisy areas, for new development including noise-sensitive uses, the Planning Department shall, through its building permit review process, in conjunction with noise analysis required pursuant to Mitigation Measure F-4, require that open space required under the Planning Code for such uses be protected, to the maximum feasible extent, from existing ambient noise levels that could prove annoying or disruptive to users of the open space. Implementation of this measure could involve, among other things, site design that uses the building itself to shield on-site open space from the greatest noise sources, construction of noise barriers between noise sources and open space, and appropriate use of both common and private open space in multi-family dwellings, and implementation would also be undertaken consistent with other principles of urban design.

**Hazardous Materials**

**Project Mitigation Measure 7 – Hazardous Building Materials (Eastern Neighborhoods Mitigation Measure L-1)**

The City shall condition future development approvals to require that the subsequent project sponsors ensure that any equipment containing PCBs or DEPH, such as fluorescent light ballasts, are removed and properly disposed of according to applicable federal, state, and local laws prior to the start of renovation, and that any fluorescent light tubes, which could contain mercury, are similarly removed and properly disposed of. Any other hazardous materials identified, either before or during work, shall be abated according to applicable federal, state, and local laws.
